Drift Sequence Produced by Whitehead Institute/MIT Center for
Genome Research, 320 Charles Street,
Cambridge, MA 02141, USA
http://www-seq.wi.mit.edu
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.

----- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: HAZB
Center clone name: RP11-241019
----- Summary Statistics
Sequencing vector: M13;
Chemistry: Dye-terminator Big Dye 5% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 164781 bases at least Q40
Consensus quality: 168264 bases at least Q30
Consensus quality: 169842 bases at least Q20
Estimated insert size: 173762; sum-of-contigs estimation
Quality coverage: 5x in Q20 bases; sum-of-contigs estimation
-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank/draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 13 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

	Genome Center				

Sequencing clone based: pUC18, 86% of reads
Whole genome shotgun: 14% of reads
Chemistry: Dye-terminator Big Dye, 100% of reads
Assembly program: Pirap; version 0.990329
Consensus quality: 189654 bases at least Q40
Consensus quality: 189667 bases at least Q30
Consensus quality: 189651 bases at least Q20
Quality coverage: 10.15x

This sequence was generated with the support of external whole genome shotgun data (<http://www.ncbi.nlm.nih.gov/Traces/trace.fcgi>) as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.

Neighboring sequence information:
This clone is overlapped by RP43-057B02.

Sequence Quality Assessment:

This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.

All manually edited bases have been reduced to quality levels above 40 are expected to have less than 1 error in 10,000 bp.

Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.

NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

1 58947: contig of 58947 bp in length
58948 58947: gap of unknown length

```

FEATURES          *      59048      189791: contig of 130744 bp in length.

----- Project Information -----
Center project name: LS642
Center clone name: 671.L.8

----- Summary Statistics -----
Sequencing vector: M13; M77815; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 187164 bases at least Q40
Consensus quality: 191936 bases at least Q30
Consensus quality: 193826 bases at least Q20
Insert size: 194000; agarose-fp
Insert size: 194931; sum-of-contigs
Quality coverage: 4.5 in Q20 bases; agarose-fp
Quality coverage: 4.4 in Q20 bases; sum-of-contigs

----- NOTE: This is a 'working draft' sequence. It currently
* consists of 20 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

1 1018: contig of 1018 bp in length

COMMENT

```

NOTICE:

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e. phred quality >30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone, fosmid clone or direct clone walk sequence. Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to obtain the consensus sequence. The assembly was confirmed by restriction digest.

This finishing standard has slightly changed from the previous Human standard. Specifically, standards for regions of low sequence complexity (such as dinucleotide repeats and small unit tandem repeats) have been relaxed. These regions are very prevalent in the mouse genome, and the return on extended finishing efforts is minimal.

If a sequence meets the criteria of the above statement, it needs no comments or tags. If the criteria are not met, such as ambiguous bases, then the region is duly annotated.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:
The BAC library has been constructed by Kazutoyo Osegawa and
Mitsuko Tateo in the laboratory of Pieter de Jong
(<http://www.chori.org>) from female C57BL/6J mouse kidney and/or
brain genomic DNA. The clone and detailed information can be
obtained from Research Genetics, Inc. (<http://www.reagen.com>) or
Pieter de Jong and coworkers at <http://www.chori.org>

This sequence is the entire insert of the clone.

Project Information
Center project name: L4696
Center clone name: 27_H_10

NOTE: This record contains 246 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

Project Information
Center project name: GPWE
Center clone name: CH230-18982
Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 21416 bases at least Q40
Consensus quality: 217873 bases at least Q20
Estimated insert size: 232141; sum-of-contigs estimation
Quality coverage: 5x in Q20 bases; sum-of-contigs estimation
NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently
consists of 2 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.
1 231923: contig of 231923 bp in length
231924 232023: gap of unknown length
232024 233195: contig of 1172 bp in length.

----- Project Information
 Center project name: The Chimpanzee Chromosome 22 Sequencing Project
 Center clone name: HC

----- Summary Statistics
 Sequencing vector: pUC18; 100% of reads
 Chemistry: Dye-terminator Big Dye and ET; 100% of reads Assembly
 program: Phrap; version 0.990319
 Consensus quality: 242,677 bases at least Q40
 Consensus quality: 242,704 bases at least Q30
 Consensus quality: 242,704 bases at least Q20

 This sequence was finished as follows unless otherwise noted: all
 regions were double stranded, sequenced with an alternate
 chemistry, or covered by high quality data (i.e., phred quality >= 30);
 an attempt was made to resolve all sequencing problems, such as
 compressions and repeats; all regions were covered by at one
 plasmid
 subclone or more than one M13 subclone;
 and the assembly was confirmed by restriction digest.

 Source information:

The PTB1 chimpanzee BAC library was prepared from DNA isolated from
 cultured cells established from the blood of a single male
 chimpanzee.
 Clones may be obtained from Asao Fujiyama and co-workers
 (http://www.gsc.riken.go.jp).
 VECTOR: pKS145

 Sequence Quality Assessment:
 This entry has been annotated with sequence
 estimates computed by the Phrap assembly program.
 All manually edited bases have been reduced to quality zero.
 Quality levels above 40 are expected to have less than 1 error in
 10,000 bp.

 Neighboring clones: RP43-015P20 (left) and PTB-071B01 (right).

Rat Genome Sequencing Consortium.
Direct Submission
Submitted (15-NOV-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Nov 15, 2002 this sequence version replaced gi:23908294.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: <http://www.hgsc.bcm.tmc.edu/>
Contact: hgsc-help@bcm.tmc.edu

Project Information
Center project name: HDW
Center clone name: RP11-267D9

Summary Statistics
Sequencing vector: plasmid;
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 345014 bases at least Q40
Consensus quality: 365949 bases at least Q30
Consensus quality: 382900 bases at least Q20
Estimated insert size: 18643; sum-of-contigs estimation
Quality coverage: 2x in Q20 bases; sum-of-contigs estimation

NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)
NOTE: This is a 'working draft' sequence. It currently
consists of 46 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

Baylor Plaza, Houston, TX 77030, USA
3 (bases 1 to 325493)
Rat Genome Sequencing Consortium.
Direct Submission
Submitted (26-SEP-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Sep 26, 2002 this sequence version replaced gi:21744091.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using AClas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the
sequence may extend beyond the ends of the clone and there may be
contigs that consist entirely of whole genome shotgun sequence
reads. Both end sequences and whole genome shotgun sequence only
contigs will be indicated in the feature table.

-----Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
-----Project Information
Center project name: GPPN
Center clone name: CH230-203L1
-----Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 251669 bases at least Q40
Consensus quality: 256472 bases at least Q40
Consensus quality: 260077 bases at least Q20
Estimated insert size: 284614; sum-of-contigs estimation
Quality coverage: 3x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)
* NOTE: This sequence may represent more than one clone.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 14 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
1 10786: contig of 10786 bp in length
* 10787 10886: gap of unknown length
* 10887 116797: contig of 105911 bp in length
* 116798 116897: gap of unknown length

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

XX PT Identifying or predicting (the predisposition of) CAD, monitoring a
XX PT subject identified as having CAD before and after treatment or the
```

```
PT progression or severity of CAD by determining specific peptide/gene
XX expression levels.
XX
XX Claim 7; SEQ ID NO 17; 136pp; English.
XX
XX The invention describes a method of identifying or predicting (the
XX CC predisposition of) coronary artery disease (CAD), monitoring a subject
XX CC identified as having CAD before and after treatment or the progression or
XX CC severity of CAD comprising determining the level of one or more peptides
XX CC or gene expression of at least one gene given in the specification in a
XX CC subject to provide a first value and in a control or reference standard
XX CC to provide a second value, and comparing whether there is a difference
XX CC between the first value and second value. Also described are: screening
XX CC candidate agents for use in treatment of CAD; treating or preventing CAD;
XX CC manufacture of a medicament for the treatment or prevention of CAD
XX CC comprising an agent that can induce a decrease in the level of gene
XX CC expression, synthesis, or activity of at least one gene or gene
XX CC expression products; and a kit for the identifying or predicting the
XX CC predisposition CAD in a subject comprising: instructions for determining
XX CC the peptide level and/or level of gene expression; control or reference
XX CC standard peptide level and/or level of gene expression from a normal
XX CC subject(s) without CAD for at least one gene or peptide cited above. A
XX CC substance comprising an agent that can induce a decrease in the level of
XX CC gene expression, synthesis, or activity of at least one gene or gene
XX CC expression product or the level of at least one disease over control
XX CC and/or predominant in disease peptide and/or induce an increase in the
XX CC level of at least one control over disease and/or predominant in control
XX CC peptide and/or a decrease in gene expression, synthesis, or activity of
XX CC at least one gene or gene expression product is useful for manufacturing
XX CC a medicament for the treatment or prevention of CAD. The method is useful
XX CC for identifying or predicting (the predisposition of) CAD, monitoring a
XX CC subject identified as having CAD before and after treatment or monitoring
XX CC the progression or severity of CAD, thus treating CAD. This sequence
XX CC represents a PTEN induced putative kinase 1 polynucleotide, a highly
XX CC predictive gene used to determine the severity of coronary artery
XX CC disease.

XX
PT Novel colon specific polypeptides and nucleic acids, useful for
PT identifying, diagnosing, monitoring, staging, imaging and treating colon
PT cancer and non-cancerous disease states in colon tissue.
XX
XX Claim 1; SEQ ID NO 64; 262pp; English.
XX
CC This invention relates to novel nucleic acid molecules and the encoded
CC polypeptides, which are present in normal and neoplastic colorectal
CC cells. Specifically, it refers to antibodies of these colon specific
CC polypeptides, as well as antagonists and agonists thereof that can be
CC used to treat colon cancer and also non-cancerous diseases states of the
CC colon. The present invention describes methods useful for the diagnosis
CC and monitoring of colon cancer metastases in a patient, by determining
CC the concentration of these colon specific proteins in a patient sample.
CC Furthermore, they are also used for gene therapy purposes, the production
CC of transgenic animals and cells, as well as producing engineered colon
CC tissue for treatment and research. This polynucleotide sequence is a
CC human colon specific cDNA sequence of the invention.

PS Disclosure; SEQ ID NO 636; 198pp; English.
XX
CC The invention relates to a nucleic acid array for detecting a cancer
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC The invention also relates to a peptide array comprising two or more
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC that binds to a polypeptide, an isolated antibody or its fragment which
CC binds to a polypeptide, which is prepared by immunizing a host animal
CC with a composition comprising the polypeptide or its antigen binding
CC fragment and collecting cells from the host expressing antibodies against
CC the antigen or its antigen binding fragment, a composition comprising the
CC antibody and a carrier, a method of screening for anticancer activity, a
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC method of treating cancer and a method of inhibiting expression of a CA
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC nucleic acids. The antibody is useful for detecting the presence or
CC absence of cancer cells in an individual which involves contacting cells
CC from the individual with the antibody and detecting a complex of a CA
CC protein from the cancer cells and the antibody, where the detection of
CC the complex correlates with the presence of cancer cells in the
CC individual. The composition is useful for inhibiting growth of cancer
CC cells in an individual or for delivering a therapeutic agent to cancer
CC cells in an individual. The invention is also useful for diagnosing
CC cancer, for treating cancer and for inhibiting expression of a CA gene in
CC a cell. This sequence represents murine cancer-associated genomic DNA of
XX the invention.

XX	
PS	Claim 1; SEQ ID NO 38443; 21pp + Sequence Listing; English.
XX	
CC	The invention relates to an isolated nucleic acid detection reagent
CC	capable of detecting 1000 or more genes from Drosophila. The invention is
CC	useful in developmental biology and in elucidating cell signaling and
CC	cell-cell interactions in higher eukaryotes for the development of
CC	insecticides, therapeutics and pharmaceutical drugs. The invention
CC	discloses genomic DNA sequences (ABU16176-ABU30511), expressed DNA
CC	sequences (ABU01840-ABU16175) and the encoded proteins (AB857737-
CC	AB872072). The sequence data for this patent did not form part of the
CC	printed specification, but was obtained in electronic format directly
CC	from WIPO at ftp.wipo.int/pub/published_pat_sequences

XX
XX New nucleic acid derived from genes associated with DNA repair, useful
PT for diagnosis, e.g. of ataxia telangiectasia, by determination of
PT cytosine methylation.
XX
PS Claim 1; SEQ ID NO 124; 25pp + Sequence Listing; English.
XX
XX The invention relates to nucleic acids containing a sequence of at least
CC 18 nucleotides of chemically treated DNA of genes associated with DNA
CC repair, and their complements. The invention also relates to nucleic
CC acids comprising at least 18 base pairs of the chemically pretreated DNA
CC of genes associated with DNA repair selected from PMS2L1, PMS2L2,
CC PMS2L2, PMS2L3, PMS2, L4, PMS2L5, MGMT, MSH2, MSH1, TDC, INP1L,
CC RFC4, DIT1L, FANCB, or XRCC8. Nucleic acids of the invention and related
CC oligomers, are useful for diagnosis of diseases associated with gene
CC repair, specifically ataxia telangiectasia, aging, Bloom's syndrome,
CC Cockayne syndrome, Niemann breakage syndrome or Werner syndrome,
CC immunodeficiency, trichiodystrophy, Fanconi's anaemia, solid tumours
CC and/or by detecting single-nucleotide polymorphisms. Determination of
CC individual methylation patterns may allow development of individualised
CC therapies. The sequences given in records AB192192-AB192335 represent
CC chemically pre-treated DNA fragments from genes associated with DNA
CC repair, and their complements. Note: The sequence data for this patent is
CC not represented in the specification, but is based on sequence
CC information supplied by the European Patent Office

 XX Nucleic acid encoding novel connective tissue associated polypeptides,
 PT

PT used in diagnosing, preventing, treating or ameliorating a disorder such
 as cancer or rheumatoid arthritis.
 PR
 XX
 XX Disclosure; SEQ ID NO 1961; 673bp; English.
 PS
 XX The present invention relates to the isolation of novel human connective
 CC tissue related polypeptides (A086435-A086923) and the polynucleotide
 CC (cDNA and genomic) sequences encoding them. The sequences of the
 CC invention are useful in the diagnosis, treatment, prevention and/or
 CC prognosis of diseases associated with connective tissue(s), including
 CC cancer. The polynucleotide sequences of the invention are also useful in
 CC gene therapy. ABK42102-ABK43116 represent genomic sequences encoding the
 CC novel human connective tissue related polypeptides. Note: The sequence
 CC data for this patent did not form part of the printed specification, but
 CC was obtained in electronic format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences

New connective tissue-related polypeptides and polynucleotides, useful
for treating, preventing and/or prognosing e.g. disorders of connective
tissue, (e.g. rheumatoid arthritis), cancers, cancer metastases and/or
neoplasias.

Disclosure; SEQ ID NO 1961; 248pp; English.

The invention describes an isolated nucleic acid molecule (I), which
comprises a sequence that is at least 95 % identical to a connective
tissue-related polynucleotide encoding connective tissue antigens (CTA).
```

CC The polypeptide or polynucleotide is useful for preventing, treating, or
 CC ameliorating medical conditions in a mammal. The connective tissue
 CC polypeptides, polynucleotides and antibodies are particularly useful for
 CC treating, preventing and/or diagnosing disorders of connective tissues
 CC (e.g. rheumatoid arthritis, discoid and systemic lupus erythematosus,
 CC scleroderma, or Sjogren's syndrome), cancer, cancer metastases and/or
 CC neoplasias (e.g. leukemia), neurodegenerative disorders (e.g.
 CC Alzheimer's disease, or Parkinson's disease), cardiovascular diseases
 CC (e.g. atherosclerosis, myocarditis or cardiopulmonary bypass
 CC complications), autoimmune diseases (e.g. systemic lupus erythematosus,
 CC rheumatoid arthritis), or multiple sclerosis), allergic reactions (e.g.

PT New nucleic acid derived from genes associated with DNA repair, useful
 PT for diagnosis, e.g. of ataxia telangiectasia, by determination of
 PT cytosine methylation.

PS Claim 1; SEQ ID NO 43; 25pp + Sequence Listing; English.

XX The invention relates to nucleic acids containing a sequence of at least
 CC 18 nucleotides of chemically treated DNA of genes associated with DNA
 CC repair, and their complements. The invention also relates to nucleic
 CC acids comprising at least 18 base pairs of the chemically pretreated DNA
 CC of genes associated with DNA repair selected from PMS2L1, PMS2L2,
 CC PMS2L2, PMS2L3, PMS2, L4, PMS2L5, PMS2L6, MGMT, MSH2, NUDT1, TDG, INPPL1,
 CC RRC4, DIT1L, FANCB, or XRC8. Nucleic acids of the invention and related
 CC oligomers, are useful for diagnosis of diseases associated with gene
 CC repair, specifically ataxia telangiectasia, aging, Bloom's syndrome,
 CC Cockayne syndrome, Nijmegen breakage syndrome or Werner syndrome,
 CC immunodeficiency, trichothiodystrophy, Fanconi's anaemia, solid tumours

CC and cancer, particularly by determining status of cytosine methylation
 CC and/or by detecting single-nucleotide polymorphisms. Determination of
 CC individual methylation patterns may allow development of individualised
 CC therapies. The sequences given in records ABL92192-ABL92335 represent
 CC chemically pre-treated DNA fragments from genes associated with DNA
 CC repair, and their complements. Note: The sequence data for this patent is
 CC not represented in the specification, but is based on sequence
 CC information supplied by the European Patent Office

PT Novel nucleic acid comprising sequence of a segment of chemically
 PT pretreated DNA of genes associated with DNA adduct, useful for diagnosis
 PT and therapy of solid tumors and cancer.

PS Claim 1; Page 52-53; 97pp; English.

XX The invention relates to chemically modified DNA of genes associated with
 CC DNA adducts, oligonucleotides and/or peptide nucleic acid (PNA) oligomers
 CC for detecting cytosine methylations as well as method for ascertaining
 CC genetic and/or epigenetic parameters of genes associated with DNA
 CC adducts. Oligomers of the invention coupled to a solid phase is useful
 CC for manufacturing an arrangement of different oligomers (array) fixed to
 CC a carrier material for analysing diseases associated with the methylation
 CC state of the CpG dinucleotides of chemically pretreated DNA of genes
 CC associated with DNA adduct. They are also useful for ascertaining genetic
 CC and/or epigenetic parameters for the diagnosis and/or therapy of existing
 CC diseases or the predisposition to specific diseases by analysing cytosine
 CC methylations. Sequences of the invention are useful for diagnosis and
 CC therapy of solid tumours and cancers. They are also useful in gene
 CC therapy. The present sequence is chemically pretreated human genomic DNA
 CC associated DNA adducts

PT Oligonucleotide for diagnosis and therapy of diseases associated with
PT signal transduction e.g. cancer, comprises chemically modified genomic
PT sequences of genes associated with signal transduction.
XX
PS Claim 1; SEQ ID NO 12; 24pp; English.
XX
CC The present invention relates to chemically modified DNA sequences of
CC signal transduction associated genes. The DNA sequences are chemically
CC modified using a solution of bisulphite, hydrogen sulphite or disulphite.
CC Also disclosed are oligonucleotides and/or PNA oligomers for detecting
CC the cytosine methylation state (CpG islands) of these genes, and a method
CC for the diagnosis and/or therapy of genetic and epigenetic parameters of
CC genes associated with signal transduction. The genomic DNA can be
CC obtained from cells or cellular components which contain DNA, e.g. cell
CC lines, biopsies, blood, sputum, stool, urine, cerebral-spinal fluid,
CC tissue embedded in paraffin such as tissue from eyes, intestine, kidney,
CC brain, heart, prostate, lung, breast or liver, histologic object slides,
CC and all their possible combinations. The sequences of the invention are
CC useful for the diagnosis and therapy of diseases associated with signal
CC transduction e.g. solid tumours and cancer. ABK31158-ABK31545 represent
CC chemically pretreated genomic DNA sequences of different genes associated
CC with signal transduction, or their complementary sequences. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from the
CC European Patent Office

XX
XX Nucleic acid, useful for diagnosis and therapy of diseases associated
XX with cell signalling e.g. cancer, comprises chemically modified genomic
XX sequences of genes associated with cell signalling.
XX
XX Claim 1; SEQ ID NO 14; 24pp + Sequence Listing; English.
XX
XX The invention relates to a nucleic acid comprising a sequence of at least
XX 18 bases of a segment of chemically pretreated DNA of genes associated
XX with cell signalling. The activity of the modified sequences of the
XX invention may be described as cytostatic. The object of the invention is
XX to provide the chemically modified DNA of genes associated with cell
XX signalling, as well as oligonucleotides and/or PNA-oligomers for
XX detecting cytosine methylations, as well as a method which is
XX particularly suitable for the diagnosis and/or therapy of genetic and
XX epigenetic parameters of genes associated with cell signalling. The
XX chemically modified DNA provided by the invention is useful for diagnosis
XX and therapy of diseases such as solid tumours and cancer. The sequences
XX given in records ABU7011-ABU7026 represent chemically pre-treated
XX genomic DNA's of genes associated with cell signalling. Note: The
XX sequence data for this patent is not represented in the printed
XX specification, but is based on sequence information supplied by the
XX European Patent Office

XX	
PT	New nucleic acid sequences from chemically modified genes associated with
PT	gene regulation, useful for analyzing cytosine methylations for diagnosis
PT	and therapy of diseases e.g. severe combined immunodeficiency disease.
XX	
PS	Claim 1; SEQ ID NO 12; 26pp; English.
XX	
CC	The invention relates to 224 nucleic acid sequences comprising at least
CC	18 bases of a chemically pretreated gene associated with gene regulation
CC	selected from 43 known genes (or complementary sequences). The chemical
CC	pretreatment converts cytosine bases unmethylated at the 5-position to
CC	uracil or another base with hybridisation behaviour dissimilar to
CC	cytosine, to enable analysis of cytosine methylations. The DNA sequences,
CC	oligonucleotides (or sets/arrows) and method are useful in the diagnosis of
CC	diseases (or predisposition to diseases) associated with gene regulation
CC	and in therapy of such diseases, by enabling analysis of the cytosine
CC	methylation patterns of such genes, kits are provided. They are
CC	especially useful in diagnosis and therapy of e.g. severe combined
CC	immunodeficiency disease, cardiac disorders, haemophilia, solid tumours
CC	and cancer, Werner syndrome, asthma, HDR syndrome, Saethre-Chotzen
CC	syndrome, renal disease, preeclampsia, graft versus-host disease. The
CC	present sequence is a sequence included in the sequence data for this
CC	specification and is associated with the human gene regulation-associated
CC	genes. Note: The sequence data for this patent did not form part of the
CC	printed specification, but was obtained in electronic format directly
CC	from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX Rozen CA, Barash SC, Ruben SM;
XX
XX WPI; 2001-483426/52.
XX
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
XX useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
XX Disclosure; SEQ ID NO 38907; 3071bp + Sequence Listing; English.
XX
XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
XX amino acid sequences given in AAM62170 to AAM91921. (I) have cytostatic
XX activity, and can be used in gene therapy and vaccine production. (I)
XX proteins and polynucleotides may be used in the prevention, diagnosis and
XX treatment of diseases associated with inappropriate (I) expression. For
XX example, they may be used to treat disorders associated with decreased
XX expression by rectifying mutations or deletions in a patient's genome
XX that affect the activity of (I) by expressing inactive proteins or to
XX supplement the patient's own production of (I). Additionally, (I)
XX polynucleotides may be used to produce the secreted (I), by inserting the
XX nucleic acids into a host cell and culturing the cell to express the
XX protein. (I) proteins and polynucleotides may be used to prevent,
XX diagnose and treat immune/haematopoietic-related diseases, especially
XX cancers and cancer metastases of hematopoietic-derived cells. AAK64703
XX to AAK76594 represent human immune/haematopoietic antigen genomic
XX sequences from the present invention. AAK54942 to AAK54950 and AAM62169
XX represent sequences used in the exemplification of the present invention

XX	WPI; 2001-483426/52.	
XX		
DR	Nucleic acids encoding human immune/hematopoietic antigen polypeptides,	
XX	useful for preventing, diagnosing and/or treating cancers and metastasis.	
XX		
XX	Disclosure; SEQ ID NO 25318; 3071pp + Sequence Listing; English.	
PS		
XX	AAM54951 to AAK4702 encode the human immune/hematopoietic antigen (I)	
CC	amino acid sequences given in AAM8210 to AAM91921. (I) have cytosolic	
CC	activity, and can be used in gene therapy and vaccine production. (I)	
CC	proteins and polynucleotides may be used in the prevention, diagnosis and	
CC	treatment of diseases associated with inappropriate (I) expression. For	
CC	example, they may be used to treat disorders associated with decreased	
CC	expression by rectifying mutations or deletions in a patient's genome	
CC	that affect the activity of (I) by expressing inactive proteins or to	
CC	suppress the patients own production of (I). Additionally, (I)	
CC	may be used to supplement the patients own production of (I).	

CC polynucleotides may be used to produce the secreted (1), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein; (1) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK7694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
CC represent sequences used in the exemplification of the present invention

XX PT New recombinant nucleic acid encoding carcinoma associated protein,
XX PT useful for preparing compositions for treating carcinomas.
XX PT
XX PS Claim 1; SEQ ID NO 962; 245bp; English.
XX PS
XX CC The invention relates to recombinant carcinoma associated (CA) nucleic
XX CC acid sequences from mouse and human (ADA01482-ADA0309), and to
XX CC recombinant carcinoma associated proteins (CAP) encoded by them. The
XX CC invention also encompasses expression vectors and host cells comprising a
XX CC CA nucleic acid, a polypeptide (especially an antibody) that specifically
XX CC binds to the protein, and a biochip comprising CA nucleic acid or
XX CC fragments thereof. The sequences of the invention were identified using
XX CC oncogenic retroviruses, which insert into the genome of the host organism
XX CC at random. Many of these do not carry transduced host oncogenes or
XX CC pathogenic trans-acting viral genes, meaning that cancer incidence is a
XX CC direct consequence of the effects of proviral integration into host
XX CC protooncogenes. The CA nucleic acid sequences can be used to diagnose
XX CC carcinoma (especially breast cancer, prostate cancer, lymphoma or
XX CC leukaemia) or a propensity to carcinoma by determination of the sequence
XX CC of a CA gene, or by determination of CA gene expression in particular
XX CC tissues. CA nucleic acids, proteins and antibodies are also useful as
XX CC therapeutic agents and in screening and evaluating drug candidates. The
XX CC present sequence represents a specifically claimed human CA nucleic acid
XX CC sequence of the invention. Note: The complete sequence data for this
XX CC patent did not form part of the printed specification, but was obtained
XX CC in electronic format directly from WIPO at
XX CC ftp.wipo.int/pub/published_pct_sequences.

XX PT Detecting the presence or diagnosing the risk of a liver cancer in a
XX PT patient comprises detecting aberrant expression of a gene encoding an
XX PT insulin-like growth factor binding protein.
XX PS Example; Page 110-127; 142pp; English.
XX CC The invention relates to detecting the presence or diagnosing the risk of
XX CC a liver cancer in a patient. The method involves detecting in a
XX CC biological sample obtained from the patient aberrant expression of a gene
XX CC encoding an insulin-like growth factor binding protein (IGFBP). The
XX CC method is useful for detecting the presence or diagnosing the risk of a
XX CC liver cancer or for screening agents in a patient. The agent is useful
XX CC for the manufacture of a medicament for treating and/or preventing liver
XX CC cancer. The present sequence represents a human IGFBP-2 polypeptide
XX CC encoding genomic DNA (GenBank Accession No. gi/18552832:211494-242517)

 CC
 CC AAK54951 to AAK64702 encode the human immune/hematopoietic antigen (I)
 CC amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic
 CC activity, and can be used in gene therapy and vaccine production. (I)
 CC proteins and polynucleotides may be used in the prevention, diagnosis and
 CC treatment of diseases associated with inappropriate (I) expression. For
 CC example, they may be used to treat disorders associated with decreased
 CC expression by rectifying mutations or deletions in a patient's genome
 CC that affect the activity of (I) by expressing inactive proteins or to
 CC supplement the patient's own production of (I). Additionally, (I)
 CC polynucleotides may be used to produce the secreted (I), by inserting the
 CC nucleic acids into a host cell and culturing the cell to express the
 CC protein. (I) proteins and polynucleotides may be used to prevent,
 CC diagnose and treat immune/hematopoietic-related diseases, especially
 CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
 CC to AAK87694 represent human immune/hematopoietic antigen genomic
 CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
 CC represent sequences used in the exemplification of the present invention

XX WPI: 2002-188264/24.

XX Screening for anti-neoplastic agent involves exposing cells to a chemical
PT agent to be tested for anti-neoplastic activity, and determining a change
XX in expression of a gene of a signature gene set.

PS Claim 1; SEQ ID NO 6261; 44pp; English.

XX The present invention describes a method (M1) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in AB161664
CC to AB170110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. M1 can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophagal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilms
CC tumour

PT

Single copy genomic hybridization probes for detecting specific nucleic
acid sequences in sample by in situ hybridization useful for detection of
acquired or inherited genetic diseases.

PS

Example 1; SEQ ID NO 324; 30bp; English.

CC The invention relates to a nucleic acid hybridisation probe comprising a
CC labelled, single copy nucleic acid of at least 50 nucleotides, which
CC will hybridise to a deduced single copy sequence interval in target
CC nucleic acid (TNA) of known sequence. The single copy sequence is deduced
CC by comparing the target nucleic acid (e.g. a disease causing gene) with a
CC collection of high and low complexity repeat sequences as found in the
CC genome of the organism from containing the target nucleic acid. The probe
CC is generated by PCR on the target sequence. The probe is essentially free
CC of blocking nucleic acid sequences which will hybridise to repeat
CC sequences within the genome of which the TNA is a part, and is labelled
CC with a label selected from fluorochrome-responsive labels, fluorochromes,
CC calorimetric chemical, conjugated proteins, antibodies, antigens and
CC their mixtures. The probe is useful in a hybridisation method, where the
CC hybridisation method is from in situ hybridisation, Southern blot, and
CC other methods in which nucleic acid is immobilised, where the method
CC further comprises selecting a single copy nucleic acid which will
CC hybridise to a duplilon or triplicon sequence domain. The probe is useful
CC for determining the existence of previously unknown repeat sequence
CC families in a genome. The method comprises reacting a labelled probe with
CC the genome, causing the probe to hybridise and ascertaining if the probe
CC hybridises to the genome at more than three preferably ten different
CC locations as a determination of new repeat sequence family, where the
CC determining step comprises selecting the single copy sequence from a
CC duplilon or triplicon sequence domain. The probe is useful for
CC determining a chromosome breakpoint and is useful in the fields for
CC cytogenetics and molecular genetics for determining the presence of
CC specific nucleic acid sequences in a sample of eukaryotic origin, e.g.
CC the probes may be used to analyse specific chromosomal locations by in
CC situ hybridisation as a detection of acquired or inherited genetic
CC diseases especially for detection of genetic or neoplastic disorders.
CC Unlike prior art techniques, the probe permits more precise chromosomal
CC breakpoint determinations by in situ hybridisation. The genomic sequence
CC comprising the human HIRA gene (histone cell cycle regulation defective,
CC S. cerevisiae, homologue A) was analysed for single copy sequence
CC intervals for use as probes of the invention. HIRA is located on
CC chromosome 22 as a duplicate, deletions of 1 copy lead to DiGeorge and
CC Velo-Cardio-facial syndromes. The present sequence is a high complexity

CC repeat found within the human genome used to analyse the HIRA gene for
 CC repeat regions. Note: The sequence data for this patent did not form part
 CC of the printed specification, but was obtained in electronic format
 CC directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=20030224356.

PT Single copy genomic hybridization probes for detecting specific nucleic
 PT acid sequences in sample by in situ hybridization useful for detection of
 PT acquired or inherited genetic diseases.

XX Example 1; SEQ ID NO 324; 67pp; English.

CC The invention describes a nucleic acid hybridization probe (I) comprising
 CC a labeled, single copy nucleic acid of at least 50 nucleotides, which
 CC will hybridize to a deduced single copy sequence interval in target
 CC nucleic acid (TNA) of known sequence. (I) is useful in a hybridization
 CC method which comprises preparing a reaction mixture comprising TNA and
 CC (I) which hybridizes to TNA, and causing (I) to hybridize to TNA, where
 CC the hybridization method is from in situ hybridization, Southern blot,
 CC and other methods in which nucleic acid is immobilized, where the method
 CC further comprises selecting a single copy nucleic acid which will
 CC hybridize to a dupliron or triplicon sequence domain. (I) is useful for:
 CC determining the existence of previously unknown repeat sequence families
 CC in a genome; determining a chromosome breakpoint and in the fields of
 CC cytogenetics and molecular genetics for determining the presence of
 CC specific nucleic acid sequences in a sample of eukaryotic origin, e.g.
 CC the probes may be used to analyze specific chromosomal locations by in
 CC situ hybridization as a detection of acquired or inherited genetic
 CC diseases especially for detection of genetic or neoplastic disorders.
 CC Unlike prior art techniques, (I) permits more precise chromosomal
 CC breakpoint determinations by in situ hybridization. Hybridization
 CC techniques utilizing (I), have made it possible to obtain reliable,
 CC easily detectable signals with relatively small probes. A readily

CC detectable signal was obtained with a probe on the order of 2 kb in
 CC length, using fluorescent in situ hybridization (FISH) technology. This
 CC sensitivity of (I) is improved compared to the prior art, because the
 CC probes of (I) are homogeneous single copy sequences. However, smaller
 CC amplified segments, each comprising non-repetitive sequences, may also be
 CC used in combination as probes to achieve adequate signals for in situ
 CC hybridization. Complex single copy probes that hybridize to duplicated or
 CC triplicated targets can also increase hybridization signals. This
 CC sequence represents a human HIRA genomic sequence that shows homology to
 CC a known high-complexity repeat sequence family of the human genome and is
 CC used in the creation of an HIRA gene probe.

CC The invention relates to 17880 cotton expressed sequence tags (ESTs);
 CC ACN45220-ACN63099). The ESTs were isolated from cDNA libraries generated
 CC from primed or non-primed seeds from variety DP50B, mature seeds from
 CC variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium
 CC tissue, developing fibres, carpel walls and septa from variety
 CC Nuccotton33B. The invention also relates to substantially purified
 CC nucleotons or their fragments encoded by nucleic acid molecules of the
 CC invention, and to transformed plants having a nucleic acid construct
 CC comprising a nucleic acid of the invention. The cotton ESTs are useful as

CC	molecular tags to isolate genetic regions, to isolate genes, to map
CC	genes, to determine gene function and to determining whether genes are
CC	members of a particular gene family. The nucleic acid molecules may be
CC	used for isolating a variety of agronomically significant genes
CC	associated with plant growth, quality, yield, and could also serve as
CC	links in metabolic and catabolic pathways. The nucleic acid molecules are
CC	also useful for identifying genes important in initiating and maintaining
CC	seed germination or that may be used to mitigate stresses encountered
CC	during seed germination. The ESTs additionally enable the acquisition of
CC	promoters and cis-regulatory elements which will be useful to express
CC	agronomically significant genes in these tissues and/or other tissues,
CC	and also permits the acquisition of molecular markers useful in breeding
CC	schemes, genetic and molecular mapping, and in cloning of agronomically
CC	significant genes. The nucleic acid molecules are further useful for
CC	detecting the expression level or pattern of a protein or mRNA and for
CC	detecting the presence or quantity of a protein by tissue printing. The
CC	present sequence represents a specifically claimed EST isolated from a
CC	cotton variety Nucleon33B androecium tissue cDNA library (LIB3628). The
CC	sequence data for this patent did not form part of the printed
CC	specification, but was obtained in electronic format directly from the US
CC	patent office at seqdata.uspto.gov/sequence.html?DocID=US20040123340

XX	from chemically treated DNA.
XX	
BS	Claim 12; 56pp + Sequence Listing; 56pp; German.
XX	
CC	This invention describes a novel method for determining the degree of
CC	methylation of a particular cytosine in a motif 5'-CpG-3', present in a

CC	genomic sample of DNA. The sample is treated chemically to convert
CC	cytosine (C) but not methylated C, to uracil, then part of the genomic
CC	DNA that contains the target C is amplified to form a labeled amplicon.
CC	The amplicon is hybridised to two classes, each with at least one member,
CC	of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
CC	degree of hybridisation to both classes is determined from the label on
CC	the amplicon. From the ratio of labels hybridised to the two classes of
CC	oligomers, the degree of methylation is calculated. The method is used:
CC	(1) for diagnosis and/or prognosis of side effects of therapeutic drugs
CC	and of a wide range of diseases, e.g. cancer, disorders of the central
CC	nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
CC	particularly by detecting mutations or single nucleotide polymorphisms
CC	(SNP's); and (ii) for differentiation of cell or tissue types and for
CC	investigating cell differentiation. The method allows the methylation
CC	status of many C residues to be determined simultaneously. ABO13410-
CC	ABO54121 represent genomic DNA sequences used to illustrate the method
CC	for determining the degree of cytosine methylation described in the
CC	disclosure of the invention

PT	Determining the degree of cytosine methylation in genomic DNA, useful for
PT	diagnosis and prognosis, comprises selective hybridization of amplicons
PT	from chemically treated DNA.
PS	Claim 12; 56pp + Sequence Listing; 56pp; German.
XX	
CC	This invention describes a novel method for determining the degree of
CC	methylation of a particular cytosine in a motif 5'-CPG-3', present in a
CC	genomic sample of DNA. The sample is treated chemically to convert
CC	cytosine (C) but not methylated C, to uracil, then part of the genomic
CC	DNA that contains the target C is amplified to form a labeled amplicon.

CC The amplicon is hybridised to two classes, each with at least one member,
CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
CC degree of hybridisation to both classes is determined from the label on
CC the amplicon. From the ratio of labels hybridised to the two classes of
CC oligomers, the degree of methylation is calculated. The method is used:
CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
CC and of a wide range of diseases, e.g. cancer, disorders of the central
CC nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
CC particularly by detecting mutations or single nucleotide polymorphisms
CC (SNP's), and (ii) for differentiation of cell or tissue types and for
CC investigating cell differentiation. The method allows the methylation
CC status of many C residues to be determined simultaneously. AB013410-
CC AB054121 represent genomic DNA sequences used to illustrate the method
CC for determining the degree of cytosine methylation described in the
CC disclosure of the invention

XX New isolated nucleic acid comprising neocentromere sequences from
XX PT eukaryotic chromosome - used to produce replicable, segregating
XX PT artificial chromosomes that can carry large amounts of DNA for gene
XX PT therapy.

XX Claim 10; Page 177-181; 540pp; English.

XX The present sequence represents a bacterial artificial chromosome (BAC)
XX CC contig, and exemplifies the invention. The specific location describes
XX CC nucleic acid sequences derived from a eukaryotic chromosome, including a
XX CC neocentromere or its functional derivative or hybrid, that are able, in a
XX CC compatible cell, of replicating, acting as extra-chromosomal element and
XX CC segregating during cell division. The sequences can be used to construct
XX CC artificial chromosomes for use in gene therapy comprising a replicable,
XX CC segregating nucleic acid that confers a specific phenotype on cells.
XX CC Human artificial chromosomes can propagate in human cells and carry large
XX CC amounts of DNA (e.g. therapeutic genes), and, being extra-chromosomal,
XX CC they are not mutagenic. The artificial chromosomes are also useful for
XX CC generation of transgenic plants and animals, in production of proteins
XX CC and to make diagnostic reagents, e.g. for expression of cytokines,
XX CC receptors and growth factors, or to increase the copy number of a gene in
XX CC a cell. The constructs may also be used for functional and structural
XX CC analysis of chromosomes

XX Claim 9; Fig 16A; 540pp; English.
XX
CC The present sequence represents the NC-contig derived from a mutated
CC human chromosome 10, 10q25.2 region. The sequence contains an unusual
CC chromosomal marker referred to as mardel(10). The mardel(10) marker is
CC mitotically stable and contains a functional neocentromere at a location
CC regarded as non-centromeric. This neocentromere maps to q25.2 on
CC chromosome 10. The specification describes nucleic acid sequences derived
CC from a eukaryotic chromosome, including a neocentromere or its functional
CC derivative or hybrid, that are able, in a compatible cell, of
CC replicating, acting as extra-chromosomal element and segregating during
CC cell division. The sequences can be used to construct artificial
CC chromosomes for use in gene therapy comprising a replicable, segregating
CC nucleic acid that confers a specific phenotype on cells. Human artificial
CC chromosomes can propagate in human cells and carry large amounts of DNA
CC (e.g. therapeutic genes), and, being extra-chromosomal, they are not
CC mutagenic. The artificial chromosomes are also useful for generation of
CC transgenic plants and animals, in production of proteins and to make
CC diagnostic reagents, e.g. for expression of cytokines, receptors and
CC growth factors, or to increase the copy number of a gene in a cell. The
CC constructs may also be used for functional and structural analysis of
CC chromosomes

XX
XX Determining the degree of cytosine methylation in genomic DNA, useful for
PT diagnosis and prognosis, comprises selective hybridization of amplicons
PT from chemically treated DNA.
XX
XX Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
XX This invention describes a novel method for determining the degree of
XX methylation of a particular cytosine in a motif 5'-CpG-3', present in a
XX genomic sample of DNA. The sample is treated chemically to convert
XX cytosine (C) but not methylated C, to uracil, then part of the genomic
XX DNA that contains the target C is amplified to form a labeled amplicon.
XX The amplicon is hybridised to two classes, each with at least one member,
XX of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
XX degree of hybridisation to both classes is determined from the label on
XX the amplicon. From the ratio of labels hybridised to the two classes of
XX oligomers, the degree of methylation is calculated. The method is used:
XX (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
XX and of a wide range of diseases, e.g. cancer, disorders of the central
XX nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
XX particularly by detecting mutations or single nucleotide polymorphisms
XX (SNP's); and (ii) for differentiation of cell or tissue types and for
XX investigating cell differentiation. The method allows the methylation
XX status of many C residues to be determined simultaneously. ABQ13410-
XX ABQ54121 represent genomic DNA sequences used to illustrate the method
XX for determining the degree of cytosine methylation described in the
XX disclosure of the invention

XX
XX
XX Determining the degree of cytosine methylation in genomic DNA, useful for
XX diagnosis and prognosis, comprises selective hybridization of amplicons
XX from chemically treated DNA.
XX
XX
XX Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
XX
XX This invention describes a novel method for determining the degree of
XX methylation of a particular cytosine in a motif 5'-CpG-3', present in a
XX genomic sample of DNA. The sample is treated chemically to convert
XX cytosine (C) but not methylated C, to uracil, then part of the genomic
XX DNA that contains the target C is amplified to form a labeled amplicon.
XX The amplicon is hybridised to two classes, each with at least one member,
XX of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
XX degree of hybridisation to both classes is determined from the label on
XX the amplicon. From the ratio of labels hybridised to the two classes of
XX oligomers, the degree of methylation is calculated. The method is used:
XX (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
XX and of a wide range of diseases, e.g. cancer, disorders of the central
XX nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
XX particularly by detecting mutations or single nucleotide polymorphisms
XX (SNP's); and (ii) for differentiation of cell or tissue types and for
XX investigating cell differentiation. The method allows the methylation
XX status of many C residues to be determined simultaneously. ABQ13410-
XX ABQ54121 represent genomic DNA sequences used to illustrate the method
XX for determining the degree of cytosine methylation described in the
XX disclosure of the invention

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 /note="Vector: PWD42nv; Purified genomic DNA from M. musculus C57BL/6J (male) was obtained from the Jackson Laboratory Mouse DNA Resource
 (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptor DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (g1473214|g1473214|g1473214|g1473214), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptor mouse DNA was annealed to adaptor vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

The library was characterised by oligonucleotide fingerprinting
(ONF) to reduce sequencing redundancy. According to the ONF
procedure, clones that display the same hybridisation matrix with a
battery of 200 6mer oligonucleotides are grouped into clusters. One
clone per ONF cluster is selected for sequencing. The size of each
cluster is an indicator of the frequency of a transcript in the
analysed library. The cluster size as well as the coordinates of
the other clones assigned to the same ONF cluster as the clone from
which the above EST is generated is available at the sea urchin
project web site at: http://www.molgen.mpg.de/ag_seaurchin/. cDNA
clones and filters are distributed via the Resource Center/Primary
Database of the German Human Genome Project (<http://www.rzpd.de>)

resistance gene). Shoots 10-30 cm long were harvested in October 2000, and the green phloem (dark) was removed and frozen quickly in dry ice. Total RNA was extracted using TRIzol reagent (Gibco). Poly(A) RNA was purified, a cDNA library was made, and 0.5 million primary lambda cDNA clones were in vivo excised to give a population of phagescript SK(-) phagemids. All steps to this point were performed in the ML Roose lab at the University of California, Riverside by X. Ye. Phagemids were plated, plasmid DNA purified, cDNA clones archived, and DNA sequences determined bi-directionally using an ABI3730 at the Arizona Genomics Institute, University of Arizona (Kim, Kudrna, Stum, Wisconsin, Wing). Chromatogram files were downloaded to UC Riverside (Close), then processed at UC Riverside (Manamaker) using the HarvEST pipeline (http://harvest.ucr.edu) to remove vector and cloning oligo sequences and various contaminants, and to trim to a high quality region. Sequences that retained a phred 17 region of at least 100 bases were deposited to Genbank."

Site 1: Ecor1; Site 2: Xho1; plant materials were prepared by Federici (Roose Lab) with advice from Parker. Seedlings 138 days after sowing were about 20-23 cm in height, bearing 8-12 leaves. On May 26, 2004, plants were washed free of soil with a stream of water, then placed upright with the roots submerged in two tanks of nutrient solution. The solution was sufficient in all major and minor nutrients and buffered with MES at about pH 6.95. The plants were maintained in this until June 14, 2004, when the solution was changed to one with only 20 micromolar iron, chelated with EDTA to induce iron deficiency. The pH was maintained at 6.99 by sodium carbonate/CO₂ buffering. This solution was replaced on July 6, 2004. Roots from three plants were sampled on June 16, June 21, July 1 and July 28, 2004. Roots were collected by removing the plant from the nutrient solution, blotting off excess moisture with a paper towel, then cutting off the top of the plants. Three plants were pooled in one aluminum foil packet, and frozen between two sheets of dry ice. The time between removal from solution and freezing on dry ice did not exceed one minute. The frozen tissue was stored in these foil packs at -80°C. This sampling strategy did not correspond to initiation of stress in the plant, but only to when the plants entered the low iron solution. The actual stress was not initiated until the internal iron reserve was depleted. By the July 1 sampling date, slight iron deficiency symptoms were apparent. By the final sampling date, clear iron deficiency symptoms were present. By the July 1 sampling date, the roots showed growth of *Thielaviopsis brevicola*, a fungus. Other than what came away when the roots were blotted with paper towels, no effort was made to remove the fungus because it is not just a surface contaminant, but grows within the roots as well. Mandel and Fenton (Close lab) purified RNA using TRIzol, poly(A) mRNA using an Oligotex mRNA Kit (Qiagen), produced a primary cDNA library using a lambda ZAP XR cDNA Synthesis Kit (Stratagene), then mass-excised 0.5 million pfu from the primary library to produce a phagemid population. The library was made from equal portions of RNA from each of the four collection dates. Phagemids were plated, plasmid DNA purified, cDNA clones archived, and DNA sequences determined bi-directionally using an ABI3730 at DNA Landmarks (Landry, Hubert, Laforest, Landry, Ligonde). Chromatogram files were downloaded by FFP by Close, then processed by Mananaker (Close lab) using the HarVEST pipeline (<http://harvest.ucr.edu>) to remove vector and cloning oligo sequences and various contaminants, and to trim to a high quality region. Sequences that retained a phred 17 region of at least 100 bases were assembled, then chimeras were removed following manual inspection of assemblies (Close, Roose, Mananaker). Sequences that survived all removal steps were submitted to GenBank."

 /note="Vector: Lambda Uni-ZAP XR, excised phagemid;
 Site_1: EcoRI; Site_2: XhoI; Plants were grown in the
 greenhouse at University of California, Riverside. The
 action was an open-pollinated (very probably selfed)
 seedling of Poncirus trifoliata cv Pomeroy that was
 selected as homozygous for the CTV resistance gene. The
 rootstock was sweet orange infected with citrus tristeza
 virus (CTV) isolate TS14 over 1 year before sampling (CTV
 infects sweet orange, but not genotypes carrying the CTV
 resistance gene. Shoots 10-30 cm long were harvested in
 October 2000, and the green phloem (bark) was removed and
 frozen quickly in dry ice. Total RNA was extracted using
 Trizol reagent (Gibco). Poly(A) RNA was purified, a cDNA
 library was made, and 0.5 million primary lambda cDNA
 clones were in vivo excised to give a population of
 Bluescript SK(-) phagemids. All steps to this point were
 performed in the M.L. Roose lab at the University of
 California, Riverside by X. Ye. Phagemids were plated,
 plasmid DNA purified, cDNA clones archived, and DNA
 sequences determined bi-directionally using an ABI3730 at
 the University of California Riverside Institute of
 Integrative Genome Biology Genomics Core Instrumentation
 Facility, (Choi, Kingan). Chromatogram files were
 downloaded by FTP by Close, then processed by Manamaker
 (Close lab) using the HarVEST pipeline
 (http://harvest.ucr.edu) to remove vector and cloning
 oligo sequences and various contaminants, and to trim to a
 high quality region. Sequences that retained a phred 17
 region of at least 100 bases were assembled, then chimeras
 were removed following manual inspection of assemblies
 (Close, Roose, Manamaker). Sequences that survived all
 removal steps were submitted to GenBank."

/note="Vector: lambda uni-ZAP XR, excised phagemid; Site_1: EcoRI; Site_2: XhoI; Plant materials were prepared by Federici (Roose lab) with advice from Parker. Seedlings

138 days after sowing were about 20-23 cm in height, bearing 8-12 leaves. On May 26, 2004, plants were washed free of soil with a stream of water, then placed upright with the roots submerged in two tanks of nutrient solution. The solution was sufficient in all major and minor nutrients and buffered with MES at about pH 6.95. The plants were maintained in this until June 14, 2004, when the solution was changed to one with only 20 micromolar iron, chelated with EDTA to induce iron deficiency. The pH was maintained at 6.99 by sodium carbonate/CO2 buffering. This solution was replaced on July 6, 2004. Roots from three plants were sampled on June 16, June 21, July 1 and July 28, 2004. Roots were collected by removing the plant from the nutrient solution, blotting off excess moisture with a paper towel, then cutting off the top of the plants. Three plants were pooled in one aluminum foil packet, and frozen between two sheets of dry ice. The time between removal from solution and freezing on dry ice did not exceed one minute. The frozen tissue was stored in these foil packs at -80°C. This sampling strategy did not correspond to initiation of stresses in the plant, but only to when the plants entered the low iron solution. The actual stress was not initiated until the internal iron reserve was depleted. By the July 1 sampling date, slight iron deficiency symptoms were apparent. By the final sampling date, clear iron deficiency symptoms were present. By the July 1 sampling date, the roots showed growth of *Thielaviopsis brevicola*, a fungus. Other than what came away when the roots were blotted with paper towels, no effort was made to remove the fungus because it is not just a surface contaminant, but grows within the roots as well. Mandal and Fenton (Close lab) purified RNA using TRIzol, poly(A) mRNA using an Oligotex mRNA Kit (Qiagen), produced a primary cDNA library using a lambda ZAP XR cDNA Synthesis Kit (Stratagene), then mass-excised 0.5 million pfu from the primary library to produce a phagemid population. The library was made from equal portions of RNA from each of the four collection dates. Phagemids were plated, plasmid DNA purified, cDNA clones archived, and DNA sequences determined bi-directionally using an ABI3730 at DNA landmarks (Landry, Hubert, Laforest, Landry, Ligonde). Chromatogram files were downloaded by FTP by Close, then processed by Wanmaker (Close lab) using the HAVEST pipeline (<http://harvest.ucr.edu>) to remove vector and cloning oligo sequences and various contaminants, and to trim to a high quality region. Sequences that retained a phred 17 region of at least 100 bases were assembled, then chimeras were removed following manual inspection of assemblies (Close, Roose, Wanmaker). Sequences that survived all removal steps were submitted to GenBank."

/clone_id="Vector: PBACindigo; Site_1: ECORI; Site_2: ECORI; Rice is the most important food crop in the world. Half of the world population, especially those inhabiting highly populated areas of the humid tropics and subtropics, rely on rice as their primary source of carbohydrate. Monocotyledonous rice is a diploid plant (2n=24) with a haploid genome equivalent of 431 Mbp (Arumuganathan and Earle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza sativa, Nipponbare variety using EcoRI as the cloning enzyme. The library contains 55,296 clones with an average insert size of 121 Kb providing approximately 15 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9%. Three high density filters, each containing 18,432 clones (doubly spotted), represent the whole library for colony screening and can be requested from the Clemson University BAC/EST Resource Center (www.genome.clemson.edu)."

/note="Vector: pBluescript II SK-; Site_1: EcoRI; Site_2: XhoI. This library, constructed by John Davies and Jeffrey McDermott, combines cDNAs from CC-1690 cells grown to mid-log phase in TAP (acetate-containing) medium in the light, TAP medium in the dark, HS (minimal) medium in ambient levels of CO2 and HS medium bubbled with 5% CO2. PolyA mRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned into lambda Zap II (Stratagene) in the EcoRI (5') and XhoI (3') sites. pBluescript II SK- plasmids were excised from the lambda Zap clones by superinfection with Exs81st (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al (1996) Genome Research 6: 791-806."

 /note="Vector: pBluescript SK(+) vector DNA, phagemid excised from lambda ZAP; Site 1: EcoRV; Site 2: EcoRV; Genomic DNA was prepared from asynchronous blood stage forms of the cloned ANKA isolate of P. berghei grown in laboratory Swiss white mice. The DNA was purified from contaminating host DNA by Hoechst Dye 33258-CsCl ultracentrifugation and precipitated. Purified DNA was digested with mung bean nuclease in the presence of 36-38% formamide at 50 C, as described (Vernick, K.D., Imbercki, R.B., and McCutchan, T.F., 1988. Nucleic Acids Research 16:6883-6896). The ends of the digestion fragments were polished using T4 DNA polymerase, and the fragments size selected in the range 500-2000 bp. These were ligated into the EcoRV-cleaved and dephosphorylated pBluescript SK(+) vector. Recombinant plasmids were used to transform E. coli XL10-Gold host cells."

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

            Primer B: No sequence submitted
            STS size: 628
            Protocol:
            23,021,928 chimpanzee whole genome shotgun reads were aligned to
            the Human Genome NCBI
            Build 34 (hg16, July 2003). Chimp WGS reads were from 9 donors,
            including Clint (Pan
            troglodytes versus), 3 other Pan troglodytes versus chimps
            (Donald,Karlien,Yvonne), 3 Pan
            troglodytes troglodytes chimps (Noemie,Masuku,Clara) and 2 chimps

```

of unknown origin
(Gen,Unknown Chimp). Common names: Pan troglodytes versus is the western chimp and Pan troglodytes troglodytes is the central chimp. To be included in chimpanzee SNP discovery, a read must be at least 500bp in length, at least 50% of its base calls must have Phred score >= 20, at least 30% of its base calls must satisfy SNOS(30,25)(single strand NGS, the base in question has Phred score >= 30, the surrounding 10 bases in the read have Phred score >= 25), and the read must have at least 200 bp SNOS(30,25) bases. Reads not uniquely placed in the genome and read pairs whose two ends were not consistently placed were discarded. After above filtering, NGS(30,25) standard was applied to all pairs of overlapping reads to call NGS bases and SNPs. Alignments (between two reads) with less than 100 NGS bases or with SNP rate > 0.01 were discarded. To exclude alignment between two copies of a single read, comparisons between two reads that share 95% of their genome alignments (<=95% bases of read A and >=95% bases of read B were placed at the same locus of human genome) were discarded.

 ----- Summary Statistics
 Center project name: H_NH0355H11
 Drafting Center: WIBR

 NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

 This sequence was finished as follows unless otherwise noted:
 all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

 MAPPING INFORMATION:
 Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

 SOURCE INFORMATION:
 The RPci-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Moon, P.Y., Zhao, B., Frengen, E., Tateo, M., Catanesi, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
 VECTOR: pBACE3.6

 NEIGHBORING SEQUENCE INFORMATION:
 The clone sequenced to the right is RP11-240A16, 2000 bp overlap. Actual start of this clone is at base position 1 of RP11-355H11; actual end is at base position 80018 of RP11-240A16.

There is an unresolved base at 67647.
 The sequence of AC024662 has been incorporated into AC093811.

Summary Statistics
Center project name: M_BB0378106

```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:
The RP24-37816 BAC library has been constructed by Pieter de Jong and coworkers (<http://www.chori.org>) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone. This clone is overlapped by AC122502.

----- Summary Statistics
Center project name: H_NH0240A16

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu/gsc>

SOURCE INFORMATION:
The RPI1-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E., Tatenno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (<http://bacpac.med.buffalo.edu>)
VECTOR: PBACe3.6

NEIGHBORING SEQUENCE INFORMATION:
Actual start of this clone is at base position 1 of RPI1-240A16; actual end is at base position 156721 of RPI1-240A16.

The sequence H NH0240A16 from base position 157677 to 158503 contains a tandem repeat. The assembly is consistent with digest information about the sequence fidelity cannot be guaranteed.

COMMENT
gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:
STS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

----- Genome Center -----
Center: Washington University Genome Sequencing Center
Center code: WUGSC
Web site: http://genome.wustl.edu
Contact: submissions@watson.wustl.edu
----- Summary Statistics -----
Center project name: C_P716B01

NOTICE: This sequence may not represent the entire insert of this
clone. It may be shorter because we only sequence overlapping
clone sections once, or longer because we provide a small overlap
between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu

SOURCE INFORMATION:
The RCI-13 BAC library has been constructed by Chung-Li Shu. DNA
was isolated from white blood cells obtained from a male chimpanzee
(Pan troglodytes, 'Clint', Yerkes #C0471; birthdate: 6-6-80). The
clone and detailed information can be obtained from Resgen
(http://www.resgen.com) or Pieter de Jong and co-workers at
http://www.bacpac.chori.org.

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

AL603662/c		
LOCUS	201275 bp DNA linear ROD 16-APR-2005	
DEFINITION	Mouse DNA sequence from clone RP23-396M19 on chromosome 11 Contains the 3' end of the Myh10 gene for non-muscle myosin heavy chain 10, the NdelI gene for nuclear distribution gene B-like homolog 1 (A. nidiulans), three genes for novel proteins (9930039A1IRik, 1810012H1IRik and D130071N09), the Rpl26 gene for ribosomal protein L26, gene Oppo1-pending (oppo 1), gene Ranl guanine nucleotide release factor (Rangnrf-pending) and three Cps islands, complete sequence.	
ACCESSION	AL603662	
VERSION	AL603662.11 GI:17736577	
KEYWORDS	HNG; 1810012H1IRik; 9930039A1IRik; D130071N09; Myh10; NdelI; oppo 1; Oppo1-pending; Rangnrf-pending; Rpl26.	
SOURCE	Mus musculus (house mouse)	
ORGANISM	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mus musculus

Pearce, A.
Direct Submission
Submitted (04-FEB-2005) Wellcome Trust Sanger Institute, Hinxton,
Cambridgehire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
Clone requests: clonerequest@sanger.ac.uk
On Dec 13, 2001 this sequence version replaced gi:17381379.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em.; EMBL; Sw.; SWISSPROT; Tr.; TrEMBL; Wp.; WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep -----
Genome Center
Center: Wellcome Trust Sanger Institute
Center code: SC
Web site: http://www.sanger.ac.uk
Contact: vegas@sanger.ac.uk

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest.
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.
RP23-396M19 is from the RP23 Mouse BAC Library
constructed by the group of Pieter de Jong.
For further details see http://www.chori.org/bacpac/home.htm
VECTOR: pBAC3.6.

Cow Genome Sequencing Consortium.

Direct Submission
Submitted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Jun 28, 2005 this sequence version replaced gi:58323918.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are oriented and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Center: Baylor College of Medicine
Center code: BCM
Web site: <http://www.hgsc.bcm.tmc.edu/>
Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: FCNZ
Center clone name: CH240-40C7
----- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 211516 bases at least Q40
Consensus quality: 213263 bases at least Q30
Consensus quality: 214829 bases at least Q20
Estimated insert size: 218022; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

----- NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently consists of 16 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

TITLE	Direct Submission		
JOURNAL	Submitted (31-AUG-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA		
COMMENT	On Aug 31, 2003 this sequence version replaced gi:25138858. Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.

-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 11 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
1
* 63601: contig of 63601 bp in length

Cow Genome Sequencing Consortium.
Direct Submission
Submitted (01-JUL-2005) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Jun 29, 2005 this sequence version replaced gi:63986587.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are oriented and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.
----- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: FFWB
Center clone name: CH240-911L2
----- Summary Statistics
Assembly program: Atlas 3.0,
Consensus quality: 224955 bases at least Q40
Consensus quality: 227750 bases at least Q30
Consensus quality: 230049 bases at least Q20
Estimated insert size: 230265; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
-----
* NOTE: Estimated insert size may differ from sequence length

```

(see http://www.hgsc.bcm.edu/docs/genbank_draft_data.html).
 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 30 contigs. The true order of the pieces
 * is not known and their order in this sequence record is
 * arbitrary. Gaps between the contigs are represented as
 * runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.

COMMENT

Center; 1-7-22 Suehiro-cho, Teurumi-ku, Yokohama, Kanagawa, 230-0045, Japan (E-mail: meeki@gsc.riken.jp, URL: <http://range.gsc.riken.jp/>, Tel: 81-45-503-9625, Fax: 81-45-503-9586)
An Arabidopsis full-length cDNA library was constructed essentially as reported previously (Seki et al. (1998) Plant J. 15:707-720; Seki et al. (2002) Science 296:141-145). This clone is in a modified pBluescript vector. Please visit our web site (<http://range.gsc.riken.jp/>) for further details.

e-mail for correspondence: arab@sequence.stanford.edu

RIKEN Genomic Sciences Center (GSC) members carried out the collection and clustering of RAFL cDNAs (RAFL CDNA: 'RIKEN Arabidopsis full-length cDNA'): Seki,M., Natsumata,M., Ishida,J., Satou,M., Kamiya,A., Sakurai,T., Carninci,P., Kawai,J., Hayashizaki,Y. and Shinozaki,K.

The Salk, Stanford, PGSC (SSP) Consortium members carried out the sequencing and annotation of the RAFL cDNAs: Nguyen,M., Southwick,A., Karlin-Neumann,G., Lam,B., Miranda,M., Palm,C.J., Bowser,L., Jones,T., Banh,J., Chen,H., Cheuk,R., Chung,M.K., Kim,C., Lin,J., Liu,S.X., Pham,P.K., Sakano,H., Shim,P., Yamada,K., Becker,J., Theologis,A. and Davis,R.W.

Nguyen,M. (SSP/Stanford) and Seki,M. (RIKEN GSC) contributed equally to this work. Shinozaki,K. (RIKEN GSC) and Davis,R.W. (SSP/Stanford) contributed equally to this work as PIs.

 Direct Submission
 Submitted (16-JAN-2000) Whitehead Institute/MIT Center for Genome
 Research, 320 Charles Street, Cambridge, MA 02141, USA
 On Apr 1, 2000 this sequence version replaced gi:6721267.
 All repeats were identified using RepeatMasker:
 Smit, A.F.A. & Green, P. (1996-1997)
 http://ftp.genome.washington.edu/RM/RepeatMasker.html

Center: Whitehead Institute/ MIT Center for Genome Research
 Center code: MIBR
 Web site: http://www-seq.wi.mit.edu
 Contact: sequence_submissions@genome.wi.mit.edu

Project Information
 Center project name: 15169
 Center clone name: 125_C_16

Summary Statistics
 Sequencing vector: MJ3; M77815; 100% of reads
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.960731
 Consensus quality: 145142 bases at least Q40
 Consensus quality: 151009 bases at least Q40
 Consensus quality: 153345 bases at least Q20
 Insert size: 160000; agarose-fp
 Insert size: 154865; sum-of-contigs

Quality coverage: 4.1 in Q20 bases; agarose-fp
 Quality coverage: 4.2 in Q20 bases; sum-of-contigs

* NOTE: This is a 'working draft' sequence. It currently
 * consists of 14 contigs. The true order of the pieces
 * is not known and their order in this sequence record is
 * arbitrary. Gaps between the contigs are represented as
 * runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.

1 1836: contig of 1836 bp in length
 * 1837 1936: gap of 100 bp
 * 1937 5796: contig of 3860 bp in length
 * 5797 5896: gap of 100 bp
 * 5897 9797: contig of 3901 bp in length
 * 9798 9897: gap of 100 bp
 * 9898 13919: contig of 4022 bp in length
 * 13920 14019: gap of 100 bp
 * 14020 17400: contig of 3381 bp in length
 * 17401 17500: gap of 100 bp
 * 17501 21253: contig of 3753 bp in length
 * 21254 21353: gap of 100 bp
 * 21354 31096: contig of 9743 bp in length
 * 31097 31196: gap of 100 bp
 * 31197 41465: contig of 10269 bp in length
 * 41466 41565: gap of 100 bp
 * 41566 50901: contig of 9336 bp in length
 * 50902 51001: gap of 100 bp
 * 51002 62041: contig of 11040 bp in length
 * 62042 62141: gap of 100 bp
 * 62142 75247: contig of 13106 bp in length
 * 75248 75347: gap of 100 bp
 * 75348 89874: contig of 14527 bp in length
 * 89875 89974: gap of 100 bp
 * 89975 116362: contig of 26388 bp in length
 * 116363 116463: gap of 100 bp
 * 116463 156165: contig of 39703 bp in length.

Email: kersti@genome.wi.mit.edu
Primer A: No sequence submitted
Primer B: No sequence submitted
STS size: 654

Protocol:
WGS-discovery (WGS):
Paired-end low-coverage whole genome shotgun reads were generated
from 9 breeds
(German Shepherd, Rottweiler, Bedlington Terrier, Beagle, Labrador
Retriever, English
Shepherd, Italian Greyhound, Alaskan Malamute and the Portuguese
Water Dog -100,000 each)
and five other canids (Chinese, Alaskan, Indian and Spanish Gray
Wolf as well as the
Californian Coyote).
The WGS reads were placed uniquely on the CanFam1.0 boxer assembly
and SNP detection was
carried out by SSAHA-SNP. 863872 reads were annotated as STSs and
485941 SNPs were
annotated with alleles from the boxer and the breed or canid from
which the particular
read came. The validation rate for these SNPs was estimated at
approximately 98%.
WGA-discovery (WGA) of Boxer/Poodle SNPs:
A second set of SNPs was generated using a similar methodology
except that the contigs
from the 1.5x poodle assembly (Kirkness 2003) were used instead of
WGS reads. Since this
sequence lacked base quality scores, arbitrary quality scores of
phred 40 were assigned
before the poodle sequence was placed uniquely on the CanFam1.0
boxer assembly and SNP
detection was carried out by SSAHA-SNP. 1637780 SNPs were annotated
with alleles from the
boxer and the poodle. The validation rate for these SNPs was
estimated at approximately TBD%.
Internal-WGA-discovery (I-WGA):
A third set of SNPs were discovered by comparing reads in the WGA
assembly. SNPs were
defined as mismatch positions that had a base quality of >= 30 on
both reads in a region.
that aligned without gaps, and with at most one additional mismatch
in the ten flanking
bases. For each allele, at least one additional read had to confirm
it. 731476 SNPs were
annotated with alleles between the two boxer alleles. The
validation rate for these SNPs
was estimated at approximately TBD%.

-----
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,

COMMENT
* NOTE: This is a 'working draft' sequence. It currently
* consists of 10 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

----- Summary Statistics
Center project name: H_GSI117B04
-----
NOTICE: This sequence may not represent the entire insert of this
clone. It may be shorter because we only sequence overlapping
clone sections once, or longer because we provide a small overlap
between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:
The sequence of this clone was established as part of a mapping and
sequencing collaboration between the NHGRI Chromosome 7 Mapping
Project (Eric D. Green, Director), John D. McPherson in the
Department of Genetics (Washington University), and the Washington
University Genome Sequencing Center. For additional information
about the map position of this sequence, see
http://www.nhgri.nih.gov/DIR/CTB/CHR7, send
mailto:egreen@nhgri.nih.gov, or see http://genome.wustl.edu/gsc

SOURCE INFORMATION:
This clone is from the first BAC library from Genome Systems, Inc.
(http://www.genomesystems.com).
Cell line: lymphoblastoid
Haplotypes: two
VECTOR: pBelobAC
Selection: chloramphenicol

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is CTA-271G13, 200 bp overlap; the
clone sequenced to the right is AC023375. Actual start of this
clone is at base position 102112 of CTA-271G13; actual end is at
base position 104668 of GSI-117B4.

The sequence from 80185 to 80225 was derived from PCR product of

 INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email
gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the
 entire insert of this clone. Overlapping regions of clones are only
 sequenced and submitted once, so the sequence for the remainder of
 the insert may be found in the record for the adjacent clones.
 Overlapping clones are noted at the beginning and end of the
 Features listing.

ANNOTATION OF FEATURES:
 STS are identified using ePCR (genome Res. 7:541-550) searches
 of a local database that includes entries from dbSTS, GDB, and
 local mapping efforts.
 Repeats are identified using RepeatMasker (A. Smit and P. Green,
 unpublished) for Human and Mouse sequences.
 Genes and Region of sequence similarity are identified by BLAST
 (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
 EST and cDNA sequences. Genes demonstrate at least two exons
 flanked by consensus splice sites that maintained sequence
 continuity across the splice junctions. Sequences that are not
 identical matches are annotated as similar.

SEQUENCING READ COVERAGE: sequencing is completed to a minimum
 standard of double strand coverage with a minimum of 2 clones and 2
 reads with no ambiguities or 2 chemistries with a minimum of 2
 clones and 3 reads with no ambiguities. If the sequence quality for
 a region does not meet this standard, it will be indicated in the
 annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality
 standards - estimated error rate less than 1 per 10,000 bases.
 Reports of lowest quality individual bases and measures of base
 quality are listed below. Description of the metrics can be found
 at URL:
<http://www.hgsc.bcm.tmc.edu:8086/quality.info/genbank.annotation.htm>.

 Contact: uwgchgs@u.washington.edu
 Drafting Center: BCM
 ----- Project Information
 Center project name: chr-3
 Center clone name: RP11-45K8 (bc0612)

----- Summary Statistics
 Sequencing vector: plasmid; 100% of reads
 Chemistry: Dye-terminator ET; 92% of reads
 Chemistry: Dye-terminator Big Dye; 8% of reads
 Assembly program: Phrap; version 0.990319
 Consensus quality: 142405 bases at least Q40
 Consensus quality: 142509 bases at least Q30
 Consensus quality: 142525 bases at least Q20
 Insert size: 142525; sum-of-contigs
 Quality coverage: 8.5x in Q20 bases; sum-of-contigs

Overlapping Sequences:
 3: Mapping in progress
 5: AP000497

----- Sequence Quality Assessment:
 This entry has been annotated with sequence quality
 estimates computed by the Phrap assembly program.
 All manually edited bases have been reduced to quality zero.
 Quality levels above 40 are expected to have less than
 1 error in 10,000 bp.
 Base-by-base quality values are not generally visible from the
 GenBank flat file format but are available as part
 of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise noted:

all regions were either double-stranded or sequenced with an
 alternate chemistry or covered by high quality data (i.e., Phred
 quality >= 30); an attempt was made to resolve all sequencing
 problems, such as compressions and repeats; all regions were
 covered by at least one plasmid subclone or more than one M13
 subclone; and the assembly was confirmed by restriction digest.

Sequence Validation:

This sequence has been validated by Multiple Complete Digest
 fingerprinting. Comparison of the experimentally derived digest
 fragments with sequence-predicted fragments is given below.
 The electronically-digested sequence consists of both insert and
 vector, in order to accurately represent the entire circular BAC.
 Small fragments below a variable cutoff (approximately 400-800 bp)
 are not resolved in the fingerprint and hence do not appear
 in the table. There are no significant remaining discrepancies
 between the experimental and predicted values. Uniquely ordered
 fragments are separated by dashed lines.

 JOURNAL Submitted (21-SEP-1999) Mika Hirakawa, Japan Science and Technology Corporation (JST), Advanced Databases Department, 5-3, Yonbancho, Chiyoda-ku, Tokyo 102-0081, Japan (E-mail:mka@tokyo.jst.go.jp, URL:http://www-alls.tokyo.jst.go.jp/, Tel:81-3-5214-8491, Fax:81-3-5214-8470)

COMMENT

This sequence is conducted by Japanese Foundation for Cancer Research as a JST sequencing Team.
 Principal Investigator: Yusuke Nakamura Ph.D
 Phone:+81-3-5449-5372, Fax:+81-3-5449-5433,
 Yusuke@jgc.ims.u-tokyo.ac.jp
 The sequence is submitted by Human Genome Sequencing in ALIS project of JST
 Japan Science and Technology Corporation (JST)
 5-3, Yonbancho, Chiyoda-ku, Tokyo, 102-0081 Japan
 For further information about this sequences, please visit our
 sequence archive Web site (http://www-alls.tokyo.jst.go.jp/HGS/cep.html) or send email to webmaster@www-alls.tokyo.jst.go.jp
 This entry is upstream sequence of AP000498.1 with a gap between them.

JOURNAL

COMMENT

Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On May 13, 2003 this sequence version replaced gi:30466985.
INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as low coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: <http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

XX The invention describes a recombinant DNA construct comprising a

XX polynucleotide consisting of a sequence encoding an amino acid sequence

XX available in electronic form from the US patent office at

XX ftp://seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide

XX of the invention are also useful in physical arrays of molecules and as

XX plant breeding markers. The recombinant DNA construct is useful for

XX improving plant tolerance to cold, heat, drought, herbicides, extreme

XX osmotic conditions, pathogens or pests, for manipulating growth rate in

XX plant cells by modification of the cell cycle pathway, for conferring

XX lignin or plant growth regulators, for producing galactomannan,

XX recombination in plants, for improving yield by modification of

XX photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake

XX or by providing improved plant growth and development under at least one

XX stress condition or for modifying seed oil or protein yield and/or

XX content. This sequence represents a plant full length insert

XX polynucleotide that can be used in the recombinant DNA construct of the

XX invention.

 XX
 XX Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA
 CC molecules associated with the cell cycle and specific PCR primers of the
 CC invention. The sequences are useful for detecting the methylation state
 CC of all CpG dinucleotides in a sequence and therefore for analysing
 CC associated diseases. By analysing cytosine methylations in the pretreated
 CC DNA, genetic and/or epigenetic parameters for the diagnosis and therapy
 CC of existing diseases or the predisposition to specific diseases can be
 CC ascertained. The parameters may be compared to another set of genetic
 CC and/or epigenetic parameters, the differences serving as basis for
 CC diagnosis and/or prognosis events which are disadvantageous to patients.
 CC The sequences of the invention are useful for the diagnosis and therapy
 CC of HIV infection, neurodegenerative disorders, graft-versus-host disease,
 CC aging, glomerular disease, Levy body disease, arthritis,
 CC arteriosclerosis, solid tumours and cancers

 XX
 XX Fragments of chemically modified genes associated with tumor suppressor
 PT genes and oncogenes, useful in designing primers and probes for analyzing
 PT diseases associated with cytosine methylation state e.g. cancer.
 XX
 XX Claim 1; SEQ ID NO 284; 27bp; English.
 XX
 XX The invention relates to a nucleic acid comprising a sequence of 18
 CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
 CC bisulphite, of genes associated with tumour suppression and oncogenes
 CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
 CC 500 are missing from the sequence listing) sequences (5s) and sequences
 CC complementary to (5s). The nucleic acid may be a peptide nucleic acid-
 CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
 CC probes for detecting the cytosine methylation state and/or single
 CC nucleotide polymorphisms and also to be used in an array for analysing
 CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
 CC probes can also be used in a method for ascertaining genetic and/or
 CC epigenetic parameters for the diagnosis and/or therapy of existing
 CC diseases or the predisposition to specific diseases, by analysing
 CC cytosine methylations. The parameters may be compared to another set of
 CC genetic and/or epigenetic parameters, the differences serving as basis
 CC for diagnosis and/or prognosis events which are disadvantageous to
 CC patients. The present sequence is one of the 533 genomic sequences
 CC derived from tumour suppressor genes and oncogenes. Sequences with even
 CC numbered Seq ID numbers are the complementary sequence of the
 CC corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
 CC 535, except for those whose partner sequence is missing). Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequences

XX
XX New nucleic acids or oligomers, useful for diagnosing or treating
XX diseases associated with DNA transcription, e.g. immunological disorders,
XX Werner syndrome, psoriasis, myocardial infarction, solid tumors or
XX cancer.
XX
XX Claim 1; SEQ ID NO 188; 32pp; English.
XX
XX The invention relates to a nucleic acid, which comprises a segment of the
XX chemically pretreated DNA of genes associated with DNA transcription from
XX one of 346 sequences, and an oligomer, in particular an oligonucleotide
XX or peptide nucleic acid (PNA)-oligomer that hybridizes to or is identical
XX to the chemically pretreated DNA of genes associated with DNA
XX transcription. The set of oligomer probes are useful for detecting the
XX cytosine methylation state and/or single nucleotide polymorphisms (SNPs)
XX in a chemically pretreated genomic DNA. The nucleic acids are useful for
XX diagnosing or treating diseases associated with DNA transcription
XX (particularly with the methylation status), e.g. adenoma desminase
XX deficiency, viral infection, retroviral infection, Sezary syndrome,
XX hematological disorders, immunological disorders, Werner syndrome,
XX tuberculosis, developmental disorders, psoriasis, Rieger's syndrome,
XX neurological disorders, neurodegenerative disorders, Wardenburg
XX syndrome, Niemann-Pick disease, myelodysplastic syndrome, myocardial
XX infarction, hypertension, angiogenesis, erythropoiesis, congenital heart
XX disease, HDR syndrome, arthritis, polyglutamine disorders, solid tumors
XX or cancer. Sequences ABK28127-ABK28472 represent DNA transcription
XX associated genomic DNA molecules of the invention. Note: The sequence
XX data for this patent did not form part of the printed specification but
XX was obtained in electronic format directly from the European Patent
XX Office

XX Early detection of soft tissue sarcoma comprises determining expression
PT of a gene in a first soft tissue sample and a normal soft tissue sample

PT and comparing the gene expression, also useful in treating soft tissue
 PT sarcoma.
 XX
 PS Example 2; SEQ ID NO 3834; 210pp; English.
 XX
 CC The invention relates to a novel method for detecting soft tissue sarcoma
 CC which comprises obtaining a first soft tissue sample from an individual
 CC and a normal soft tissue sample from the same or different individual,
 CC determining the expression of a gene in both samples and comparing the
 CC expression of the gene in both soft tissue samples, where a higher level
 CC of protein expression in the first soft tissue sample indicates the
 CC presence of soft tissue sarcoma. The method of the invention has
 CC cytostatic applications and may be useful for detecting soft tissue
 CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
 CC acid sequences may be useful in diagnostic and screening applications.
 CC The current sequence is that of a human soft tissue sarcoma-upregulated
 CC DNA of the invention. The current sequence is not shown within the
 CC specification per se but was submitted in CD format by the inventor.

 XX
 PS Claim 1; SEQ ID NO 129; 32pp; English.
 XX
 CC The invention relates to a nucleic acid, which comprises a segment of the
 CC chemically pretreated DNA of genes associated with DNA transcription from
 CC one of 346 sequences, and an oligomer, in particular an oligonucleotide
 CC or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical
 CC to the chemically pretreated DNA of genes associated with DNA
 CC transcription. The set of oligomer probes are useful for detecting the
 CC cytosine methylation state and/or single nucleotide polymorphisms (SNPs)
 CC in a chemically pretreated genomic DNA. The nucleic acids are useful for
 CC diagnosing or treating diseases associated with DNA transcription
 CC (particularly with the methylation status), e.g. adenosine deaminase
 CC deficiency, viral infection, retroviral infection, Sezary syndrome,
 CC haematological disorders, immunological disorders, Werner syndrome,
 CC tuberculosis, developmental disorders, psoriasis, Rieger's syndrome,
 CC neurological disorders, neurodegenerative disorders, Wardenburg
 CC syndrome, Niemann-Pick disease, myelodysplastic syndrome, myocardial
 CC infarction, hypertension, angiogenesis, erythropoiesis, congenital heart
 CC disease, HDR syndrome, arthritis, polyglutamine disorders, solid tumours
 CC or cancer. Sequences ABK28127-ABK28472 represent DNA transcription
 CC associated genomic DNA molecules of the invention. Note: The sequence
 CC data for this patent did not form part of the printed specification but
 CC was obtained in electronic format directly from the European Patent

XX Nucleic acid, useful for diagnosis and therapy of diseases associated
 PT with cell signaling e.g. cancer, comprises chemically modified genomic
 PT sequences of genes associated with cell signaling.

XX Claim 1; SEQ ID NO 406; 24pp + Sequence Listing; English.

XX The invention relates to a nucleic acid comprising a sequence of at least
 CC 18 bases of a segment of chemically pretreated DNA of genes associated
 CC with cell signaling. The activity of the modified sequences of the
 CC invention may be described as cytosolic. The object of the invention is
 CC to provide the chemically modified DNA of genes associated with cell
 CC signaling, as well as oligonucleotides and/or PNA-oligomers for
 CC detecting cytosine methylations, as well as a method which is

CC particularly suitable for the diagnosis and/or therapy of genetic and
 CC epigenetic parameters of genes associated with cell signaling. The
 CC chemically modified DNA provided by the invention is useful for diagnosis
 CC and therapy of diseases such as solid tumours and cancer. The sequences
 CC given in records ABL70111-ABL70626 represent chemically pre-treated
 CC genomic DNA's of genes associated with cell signaling. Note: The
 CC sequence data for this patent is not represented in the printed
 CC specification, but is based on sequence information supplied by the
 CC European Patent Office

PT New nucleic acid sequences from chemically modified genes associated with
XX gene regulation, useful for analyzing cytosine methylations for diagnosis
XX and therapy of diseases e.g. severe combined immunodeficiency disease.
PS Claim 1; SEQ ID NO 48; 26pp; English.
XX
CC The invention relates to 224 nucleic acid sequences comprising at least
CC 18 bases of a chemically pretreated gene associated with gene regulation
CC selected from 43 known genes (or complementary sequences). The chemical
CC pretreatment converts cytosine bases unmethylated at the 5-position to
CC uracil or another base with hybridisation behaviour dissimilar to
CC cytosine, to enable analysis of cytosine methylations. The DNA sequences,
CC oligomers (or sets/arrays) and method are useful in the diagnosis of
CC diseases (or predisposition to diseases) associated with gene regulation
CC and in therapy of such diseases, by enabling analysis of the cytosine
CC methylation patterns of such genes, kits are provided. They are
CC especially useful in diagnosis and therapy of e.g. severe combined
CC immunodeficiency disease, cardiac disorders, haemophilia, solid tumours
CC and cancer, Werner syndrome, asthma, HDR syndrome, Saethre-Chotzen
CC syndrome, renal disease, preeclampsia, graft versus-host disease. The
CC present sequence is a sequence included in the sequence data for this
CC specification and is associated with the human gene regulation-associated
CC genes. Note: The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
XX New recombinant nucleic acid encoding carcinoma associated protein,
PT useful for preparing compositions for treating carcinomas.
XX
XX Claim 1; SEQ ID NO 1148; 245bp; English.
XX
XX The invention relates to recombinant carcinoma associated (CA) nucleic
CC acid sequences from mouse and human (ADA01482-ADA03094), and to
CC recombinant carcinoma associated proteins (CAP) encoded by them. The
CC invention also encompasses expression vectors and host cells comprising a
CC CA nucleic acid, a polypeptide (especially an antibody) that specifically
CC binds to the protein, and a biochip comprising CA nucleic acid or
CC fragments thereof. The sequences of the invention were identified using
CC oncogenic retroviruses, which insert into the genome of the host organism
CC at random. Many of these do not carry transduced host oncogenes or
CC pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC direct consequence of the effects of proviral integration into host
CC protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC carcinoma (especially breast cancer, prostate cancer, lymphoma or
CC leukaemia) or a propensity to carcinoma by determination of the sequence
CC of a CA gene, or by determination of CA gene expression in particular
CC tissues. CA nucleic acids, proteins and antibodies are also useful as
CC therapeutic agents and in screening and evaluating drug candidates. The
CC present sequence represents a specifically claimed human CA nucleic acid
CC sequence of the invention. Note: The complete sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pcr_sequences.

 PT Nucleic acid array useful for detecting cancer associated nucleic acid,
 PT comprises two or more nucleic acid probes.
 XX
 PS Disclosure: SEQ ID NO 738; 198pp; English.
 XX

The invention relates to a nucleic acid array for detecting a cancer associated (CA) nucleic acid, comprising two or more nucleic acid probes. The invention also relates to a peptide array comprising two or more isolated polypeptides encoded by a CA nucleic acid sequence, a compound that binds to a polypeptide, an isolated antibody or its fragment which binds to a polypeptide, which is prepared by immunizing a host animal with a composition comprising the polypeptide or its antigen binding fragment and collection cells from the host expressing antibodies against the antigen or its antigen binding fragment, a composition comprising the antibody and a carrier, a method of screening for anticancer activity, a method of detecting a CA nucleic acid, a method of diagnosing cancer, a method of treating cancer and a method of inhibiting expression of a CA nucleic acid in a cell. The CA nucleic acids are useful for detecting CA nucleic acids. The antibody is useful for detecting the presence or absence of cancer cells in an individual which involves contacting cells from the individual with the antibody and detecting a complex of a CA protein from the cancer cells and the antibody, where the detection of the complex correlates with the presence of cancer cells in the individual. The composition is useful for inhibiting growth of cancer cells in an individual or for delivering a therapeutic agent to cancer cells in an individual. The invention is also useful for diagnosing cancer, for treating cancer and for inhibiting expression of a CA gene in a cell. This sequence represents murine cancer-associated genomic DNA of the invention.

 PT New isolated cancer-associated polynucleotides and polypeptides useful
 PT for diagnosing, preventing or treating cancer, especially lymphoma and
 PT leukemia, or in screening for agents that modulate cancer.
 XX
 PS claim 16; seqid 239; 310pp; English.
 XX

The invention relates to an isolated nucleic acid comprising at least 10 contiguous nucleotides of any of the 233 polynucleotide sequences given in the specification, or its complement. The nucleic acids encode cancer-associated proteins. Also included are an expression vector comprising the isolated nucleic acid cited above, a host cell comprising the above recombinant nucleic acid or expression vector, a microarray for detecting a cancer-associated (CA) nucleic acid comprising at least one probe comprising at least 10 contiguous nucleotides of any of the above-mentioned nucleotide sequences, an isolated polypeptide (encoded within an open reading frame of a CA sequence selected from any of the 95 polynucleotide sequences as mentioned in the specification, or its complement), an isolated antibody, (or its antigen binding fragment) that binds to the above polypeptide, a hybridoma that produces the above monoclonal antibody, a pharmaceutical composition comprising the above antibody and a pharmaceutical excipient, a kit for detecting cancer cells (comprising the antibody cited above, methods for diagnosing cancer or for detecting the presence or absence of cancer cells in an individual, a method for inhibiting growth of cancer cells in an individual, a method for delivering a therapeutic agent to cancer cells in an individual, an electronic library comprising the above polynucleotide or polypeptide (or their fragments), methods of screening

CC for anticancer activity or for a bioactive agent capable of modulating
CC the activity of a CA protein (CAP), methods for detecting cancer
CC associated with expression of a polypeptide in a test cell sample, a
CC method for treating cancers and a method for inhibiting the expression of
CC CA gene in a cell. The composition and methods are useful for detecting,
CC diagnosing, preventing and treating cancers, especially lymphoma and
CC leukemia. These may also be used in screening for agents that modulate
CC cancer. The present sequence is a human CAP genomic sequence. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

XX genes and oncogenes, useful in designing primers and probes for analyzing
XX diseases associated with cytosine methylation state e.g. cancer.
XX
XX Claim 1; SEQ ID NO 514; 27bp; English.

CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The

CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Sequences with even
CC numbered Seq ID numbers are the complementary sequence of the
CC corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
CC 535, except for those whose partner sequence is missing). Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

XX PT PTAN proteins, and sequences encoding them, used for diagnosing and
 PT treating cancers, especially breast and prostate cancers.

XX PS Example 1; Page 31; 71pp; English.

XX CC This sequence represents a primer used in the isolation of cDNA fragments
 CC of the PTAN (testis specific protein expressed in prostate cancer) gene.
 CC PTAN is expressed in 3 isoforms PTAN-1, 2, and 3. The PTAN gene is
 CC located on chromosome 1q22. PTAN is overexpressed in prostate cancer, and
 CC has a testis specific expression pattern in adult tissues. PTAN shows no
 CC homology to any known gene. PTAN can be used in methods for the diagnosis
 CC of cancer, especially prostate or breast cancer, where the normal tissue
 CC samples are prostate tissue, or breast tissue, bone tissue, lymphatic
 CC tissue, serum, blood, or urine. A vector containing the PTAN nucleotide
 CC sequence, a vaccine composition targeting PTAN, PTAN, ribozymes specific
 CC for PTAN mRNA and antisense sequences, can be used to treat cancer,
 CC especially breast and prostate cancers. Cancer development can be
 CC inhibited by a vaccine composition targeting PTAN

 PS Example 1; Page 31; 62pp; English.
 XX
 CC The present sequence is that of cDNA synthesis primer DPNCDN, which was
 CC used in a suppression subtractive hybridization protocol designed to
 CC identify novel prostate and prostate cancer specific genes. cDNAs from
 CC androgen dependent LAPC-4 xenograft were compared with cDNAs derived from
 CC androgen independent LAPC-4 xenograft. A 437 bp clone was obtained. Full-
 CC length cDNA (see AA294275) was subsequently cloned from a testis cDNA
 CC library. This encoded PHELIx (see AA79269), a novel transcription factor
 CC that is normally expressed only in testis tissue, but is up-regulated in
 CC prostate and other types of cancer. The invention provides diagnostic and
 CC therapeutic methods useful in the management of various cancers whic
 CC express PHELIx, including prostate cancer, bladder cancer, ovarian cancer
 CC and testicular cancer

 PT
 PT New isolated BPC-1 polypeptides, useful for developing products for the
 diagnosis, staging, prognosis and treatment of cancers, particularly

```

PT prostate or bladder cancer.
XX
XX Example 1; Page 35; 79pp; English.
XX
CC BPC-1 polypeptides and polynucleotides can be used for the detection of
CC BPC-1 polypeptides and polynucleotides in biological samples, this is
CC particularly useful for detecting cancers expressing BPC-1, e.g. prostate
CC cancer or bladder cancer. Antibodies directed against BPC-1 or antisense
CC polynucleotides can be used for treating such cancers. The BPC-1
CC polypeptides can also be used in vaccines for treating or inhibiting the
CC development of a cancer expressing BPC-1. The polypeptides and
CC polynucleotides can also be used for detection, prognosis, drug screening
CC and predicting susceptibility to developing cancer. The BPC-1 polypeptide
CC comprises a CUB domain which is expressed in prostate and bladder
CC carcinoma cells and which shows sequence similarity with CUB domains from
CC other known proteins. In normal human tissues BPC-1 is only expressed in
CC certain tissues of the brain, however, it is expressed at high levels in
CC prostate cancer cells and bladder cancer cells. A number of synthetic
CC oligonucleotides were used to generate BPC-1 cDNA from total cell RNA of
CC tumour cells lines. These primers were a cDNA synthesis primer
CC (AAZ93041), two adaptor sequences (AAZ93042-Z93045), a PCR primer
CC (AAZ93046) and two nested primers (AAZ93047, AAZ93048). This sequence is
CC the cDNA synthesis primer

PT Diagnosing prostate cancer by determining the level of testis-specific
PT protein Y-encoded (TSPY) mRNA or protein and comparing these TSPY mRNA or
PT protein levels to those of a normal tissue sample.
XX
XX Example 1; Page 20; 32pp; English.
XX
CC The specification describes a new method of diagnosis of prostate cancer.
CC The method comprises determining the level of testis-specific protein Y-
CC encoded (TSPY) mRNA or protein, and comparing these TSPY mRNA or protein
CC levels to those of a normal tissue sample. The presence of elevated TSPY
CC mRNA or protein is indicative of prostate cancer. Detection of TSPY mRNA
CC expression or protein levels is useful in the diagnosis of prostate
CC cancer. Antisense polynucleotides complementary to the coding sequence of
CC human TSPY are useful for treating prostate cancer by inhibiting TSPY
CC transcription (when contacted with the TSPY gene) or translation (when
CC contacted with the TSPY mRNA). Ribozymes are also useful for treating
CC prostate cancer by cleaving the TSPY mRNA and therefore inhibiting its

```

CC translation. The vaccine is useful for inhibiting the development of
CC prostate cancer in a patient. The present sequence represents a primer
CC used for CDNA synthesis, used in the course of the invention

Novel putative transcription factor gene 36P1A6 for treatment, diagnosis

and prevention of prostate, bladder, cervical, ovarian, pancreatic, and

colonic cancer.

Example 1; Page 29; 53pp; English.

The human 36P1A6 gene encodes a putative transcription factor based on

homology to the murine EHF gene which encodes a transcription factor

which is a member of the ETS family. 36P1A6 is expressed in androgen-

dependent and androgen-independent LAPC prostate cancer xenografts and in

normal prostate at approximately equal levels. The highest expression is

in the prostate and colon. 36P1A6 may be involved in activating tumor-

promoting genes or repressing genes that block tumorigenesis. The 36P1A6

polynucleotides and polypeptides are used for the treatment and diagnosis

of cancer, e.g. prostate, bladder, cervical, ovarian, pancreatic and

colonic cancer (all claimed). Anti-36P1A6 antibodies may be used for

purifying 36P1A6 and for isolating 36P1A6 homologues. Antisense

oligonucleotides and ribozymes can be used to inhibit the transcription

and translation of the 36P1A6 gene (claimed). The 36P1A6 polynucleotides

and polypeptides and immunogenic fragments may also be used in cancer

vaccines (claimed)

Detecting cancers, particularly of prostate and colon, from

overexpression of SGP28 protein, also methods for treating these cancers

e.g. by vaccination with the protein.

Example 1; Page 58; 102pp; English.

The present invention relates to methods and compositions for the

diagnosis and therapy of prostate cancer which utilizes human SGP28

(specific granule protein 28) gene and proteins. The method involves

detecting cancers, particularly of prostate and colon, from

overexpression of SGP28 protein. The expression of SGP28, which is an

extracellular protein is restricted to the prostate and ovary, and is

markedly up-regulated in prostate tumours. SGP28 sequence is used for

diagnosis (including in vivo imaging), staging, monitoring and prognosis

of prostate and colon cancer, and for assisting selection of therapy.

Also SGP28-expressing cancers can be treated by administering a

composition or vaccine that contains a vector expressing an antibody

specific for SGP28 protein, nucleic acid encoding SGP28 protein or its

fragments, polypeptides encoded by SGP28 gene and SGP28-specific antibody

optionally conjugated to toxin or therapeutic agent. SGP28 gene product

is also used as source of therapeutic antisense or ribozyme agents, as

primer/probes for diagnosis or prognosis, to identify compounds that

inhibit calcium entry into prostatic cells, for recombinant production of

SGP28 peptides and for isolating related sequences. SGP28 protein and its

fragments are used to raise specific antibodies (Ab) and to identify

specific binding agents (potentially useful as therapeutic and diagnostic

agents) and also potential anticancer agents. The present sequence is a

DPNCDN primer used to synthesize human SGP28 cDNA

PT comparing protein level in test sample to normal sample, where elevated
PT level of protein in test sample indicates presence of cancer.
XX
XX Example 1; Page 69, 113pp; English.
XX
XX The present invention relates to a gene and its encoded secreted tumour
CC antigen, termed 36p65. These sequences are used for the diagnosis and
CC treatment of various cancers which express 36p65, such as cancers of the
CC kidney, bladder, ovary, breast, pancreas, colon and lungs. In normal
CC individuals 36p65 protein, is predominantly expressed in pancreas, with
CC lower levels of expression in prostate and small intestine. Vaccines
CC comprising immunogenic protein of 36p65 is useful for inhibiting the
CC development of prostate or colon cancer. Pharmaceutical composition
CC comprising 36p65 protein is useful for diagnosis and/or prognosis of
CC prostate cancer and other cancers, for modulating or inhibiting the
CC expression of 36p65 genes and/or translation of the 36p65 transcripts,
CC and as therapeutic agents. The present sequence is human 36p65 cDNA
CC synthesising primer, DPNCDN. Note: This sequence SEQ.ID.NO.3 is stated as
CC being similar to the sequence shown in sequence listing. However this
CC sequence contains 29 additional T bases at 3' end, which is missing in
CC the sequence shown in sequence listing.

XX
XX The invention relates to a novel human C-type lectin transmembrane
CC antigen, PC-L ECTIN (AAB73309) and cDNA encoding it (AAF76004). The
CC expression of the human PC-L ECTIN gene is normally restricted to the
CC testis, but is highly overexpressed in prostate cancer. PC-L ECTIN
CC expression is higher in androgen-dependent prostate tumours compared with
CC androgen-independent prostate tumours, and expression is therefore likely
CC to be dependent on the presence of androgen. Human PC-L ECTIN therefore
CC represents a diagnostic and therapeutic target for prostate cancer.
CC particularly androgen-dependent prostate cancer. Human PC-L ECTIN exhibits
CC homology to hamster layilin (44.9% identity over a 265 residue overlap),
CC but is not thought to be the human orthologue of layilin, as diverges
CC significantly in a key functional domain proposed for the layilin
CC protein. Human PC-L ECTIN or an immunogenic portion thereof, a vector
CC encoding PC-L ECTIN, a PC-L ECTIN antisense nucleotide, a PC-L ECTIN
CC nucleotide-targeted ribozyme, or an anti- PC-L ECTIN antibody may be used
CC to prepare a composition for treating a patient with a cancer,
CC particularly prostate cancer, but also breast, bladder, lung, bone,
CC colon, pancreatic, testicular, cervical or ovarian cancers that express
CC PC-L ECTIN. PC-L ECTIN proteins are also useful for diagnosing the presence
CC of cancer. PC-L ECTIN antibodies and nucleotides are useful in the
CC treatment (e.g., antisense therapy), diagnosis and/or prognosis of
CC prostate cancer and other PC-L ECTIN-expressing cancers. PC-L ECTIN
CC antibodies may also be used as drug targeting agents. The PC-L ECTIN
CC nucleotides and proteins may additionally be used in drug discovery to
CC identify molecules that modulate PC-L ECTIN function or expression. The
CC present sequence represents a reverse transcription (RT) primer used in
CC the isolation of human PC-L ECTIN cDNA

XX Monitoring 158P1H4 gene products in biological sample from patient who
PT has or is suspected of having cancer, useful for treating cancer,
PT comprises identifying presence of aberrant 158P1H4 gene products in
PT biological sample.
XX
XX Example 1; Page 69; 209pp; English.
XX
XX The present invention describes a method for monitoring 158P1H4 gene
CC products in a biological sample from a patient who has or is suspected of
CC having cancer. The method comprises determining the status of 158P1H4
CC gene products in a tissue sample from an individual, comparing the status
CC to the status of 158P1H4 gene products in a normal sample, and
CC identifying the presence of aberrant 158P1H4 gene products in the sample.
CC 158P1H4 sequences have cytostatic activity and can be used in vaccine
CC production. 158P1H4 polynucleotides may be used in monitoring genetic
CC abnormalities. The 158P1H4 proteins may be used in assessing the status
CC of 158P1H4 gene products in normal versus cancerous tissues and so
CC elucidating the malignant phenotype, in generating and characterizing
CC domain-specific antibodies, for identifying agents or cellular factors
CC that bind to 158P1H4 or its particular domain, and for generating cancer
CC vaccines. Antibodies against 158P1H4 are useful in diagnostic and
CC prognostic assays, in treating patients with cancer, in generating
CC cytotoxic T lymphocyte (CTL) or helper T lymphocyte (HTL) responses, and
CC as immunological reagents for detecting 158P1H4-expressing cells. The
CC antibodies are particularly useful in bladder cancer diagnostic and
CC prognostic assays, and imaging methodologies. The 158P1H4 gene has been
CC located to chromosome 8q22-q23, and the 158P1F4 gene also described in
CC ABL50429 and ABB94468 to ABB95188 represent sequences used in the
CC exemplification of the present invention

PT New gene designated 34PD7, encoding a tissue-specific protein highly
 PT expressed in prostate cancer, for use as diagnostic and/or therapeutic
 PT target for cancers, and for eliciting an immune response.
 XX

PS Example 1; Page 53; 112pp; English.

CC The invention relates to a polynucleotide, designated 34PD7, encoding a
 CC 34PD7-related protein, comprising a sequence of 2198 nucleotides fully
 CC defined in the specification. The presence of elevated 34PD7 mRNA or
 CC protein expression indicates the presence of cancer occurring in
 CC prostate, bladder, kidney, bone, cervical, uterine, ovarian,
 CC breast, pancreatic, stomach, colon, rectal leukocytes, liver, and lung
 CC tissue, and in melanocytes. An antibody against the 34PD7-related
 CC protein, an antisense polynucleotide complementary to 34PD7
 CC polynucleotide, or a ribozyme capable of cleaving the 34PD7
 CC polynucleotide is useful for inhibiting the development of a cancer
 CC expressing 34PD7 in a patient. The present sequence was used in an
 CC example demonstrating suppression subtractive hybridisation (SSH) -
 CC generated isolation of a cDNA fragment of the 34PD7 gene

PT New isolated 98P7C3-related homeodomain protein highly expressed in
 PT various cancers, useful in cancer vaccines and for generating immune
 PT response directed to 98P7C3 in mammal.
 XX

PS Example 1; Page 53; 155pp; English.

CC The invention relates to an isolated 98P7C3-related protein which is a
 CC homeodomain protein highly expressed in various cancers. Also include are
 CC polynucleotides encoding the protein or proteins 90% identical to 98P7C3,
 CC a pharmaceutical composition comprising the polynucleotides (including an
 CC expression vector comprising the 98P7C3 encoding polynucleotides) or a
 CC host cell transformed with the vector, an anti-98P7C3 antibody, a non-
 CC human transgenic animal expressing a 98P7C3 protein, methods of detecting
 CC the 98P7C3 protein or polynucleotides in a biological sample, monitoring
 CC the presence of cancer in an individual by detecting an elevated level of
 CC the 98P7C3 protein or polynucleotides and a pharmaceutical composition
 CC comprising a modulator of 98P7C3, 98P7C3 protein, or T cell/B cell
 CC epitopes derived from it, are useful in inducing an immune response (in
 CC mammal) to a 98P7C3 protein. Upon contact with a cytotoxic T cell (CTL)
 CC the immunogens induce the CTL (with its helper T cell) to kill an
 CC autologous cell expressing 98P7C3. The immunogen may be a nucleic acid
 CC encoding the protein or epitope. The antibody is useful for delivering a
 CC cytotoxic agent to a cell that expresses 98P7C3, by conjugating the
 CC cytotoxic agent to the antibody or its fragment that specifically binds
 CC to a 98P7C3 epitope, and exposing the cell to the antibody-agent
 CC conjugate. The modulator is useful for treating a patient with a cancer
 CC that expresses 98P7C3 (e.g. prostate cancer, bladder cancer, kidney
 CC cancer, lung cancer, breast cancer, uterine cancer, cervical cancer,
 CC stomach cancer, rectal cancer and colon cancer), by administering to the
 CC patient a vector that comprises the modulator, such that the vector
 CC delivers a single chain monoclonal antibody coding sequence to the cancer
 CC cells and the encoded single chain antibody is expressed intracellularly
 CC in it. The gene for 98P7C3 is located on human chromosome 4q11-q12. The
 CC present sequence is oligonucleotide adapter or PCR primer used to isolate
 CC a cDNA sequence for 98P7C3 by the method of suppression subtractive
 CC hybridisation, SSH

Monitoring 83P2H3 gene products for monitoring the presence of cancer in a subject, comprises determining the status of 83P2H3 gene products in a tissue sample from the subject and comparing it to a normal sample.

Example 1; Page 75; 270pp; English.

The invention relates to monitoring 83P2H3 (a calcium transport protein whose gene is located on chromosome 7q34) gene products in a biological sample from a patient who has or is suspected of having cancer (especially prostate cancer), comprises: (a) determining the status of 83P2H3 gene products expressed by cells in a tissue sample from an individual and (b) comparing the status to the status of 83P2H3 gene products in a normal sample. Also included are modulators of 83P2H3 function or status, generating antibodies/immune response against 83P2H3 (or related protein CatrF2B11 whose gene is located on chromosome 12q24.1) using identified HLA (human leukocyte antigen) binding peptides derived from the protein, delivering a cytotoxic agent to a cell expressing 83P2H3 by conjugating the agent to an anti-83P2H3 antibody, a recombinant protein comprising an antigen-binding region of the antibody, a non-human transgenic animal that produces the recombinant protein, a hybridoma that produces the recombinant protein, a single-chain monoclonal antibody that comprises the variable domains of the heavy and light chains of the anti-83P2H3 antibody, a vector comprising a polynucleotide that encodes the monoclonal antibody and inducing an immune response to a 83P2H3 protein, by providing a 83P2H3-related protein that comprises a T cell or B cell epitope, and contacting the epitope with an immune system T cell or B cell, respectively. The method is useful for monitoring 83P2H3 gene products in a biological sample for monitoring the presence of cancer in an individual. The modulator is useful for inhibiting the growth of cancer cells that express 83P2H3, for treating cancer and the vector is useful for treating a patient with a cancer that expresses 83P2H3. The immunological methods are useful for generating an immune response against 83P2H3, and for detecting the presence of 83P2H3-related protein or polynucleotide in a biological sample from a patient who has or who is suspected of having cancer. The antibody is useful in prostate cancer diagnosis, prognosis, imaging

CC methodologies and treatment, to detect and quantify 83P2H3 and mutant
 CC 83P2H3-related proteins, for purifying a 83P2H3-related protein, for
 CC isolating 83P2H3 homologues/related molecules, and for generating anti-
 CC idiotypic antibodies that mimic the 83P2H3 protein. The present sequence
 CC is a PCR primer used in the isolation of cDNA encoding 83P2H3 or its
 CC related protein CatrF2B11

Composition comprising a substance that modulates the status of a zinc transporter protein (108P5H8), useful in diagnosing and treating patients with cancer that expresses 108P5H8, such as breast, colon, ovarian or lung cancer.

Example 1; Page 94; 309pp; English.

The invention relates to a new composition comprising a substance that modulates the status of a zinc transporter protein, designated as 108P5H8, or a molecule that is modulated by 108P5H8. The composition is useful in diagnosing, preventing, prognosticating or treating patients with cancer that expresses 108P5H8, such as breast, colon, ovarian or lung cancer. The 108P5H8 gene or its fragment can be used to elicit a humoral or cellular immune response. The antibodies are useful in active or passive immunisation. The 108P5H8 polynucleotides are useful as probes and primers for the amplification or detection of 108P5H8 genes, as coding sequences for directing the expression of 108P5H8 polypeptides, or as tools for modulating or inhibiting the expression of 108P5H8 genes. The polynucleotides of the invention can be used to treat disorders by gene therapy. This polynucleotide sequence represents a zinc transporter protein 108P5H8 related PCR primer of the invention

XX PT New pharmaceutical composition for diagnosing, prognosing, preventing or
XX PT treating cancer; comprises a substance that modulates a nucleic acid
XX PT sequence, e.g. 105P1B7, 152P1A2B or 156P3A6, or a molecule modulated by
XX PT the nucleic acid.
XX PS
XX PS Example 1; Page 33; 72pp; English.
XX CC
XX CC The present invention relates to a pharmaceutical composition comprising
XX CC a substance that modulates the status of a cancer associated nucleic acid
XX CC sequence such as given in the specification (see ABZ20564-ABZ20575) or a
XX CC molecule that is modulated by the above nucleic acid sequence, where the
XX CC status of a cell that expresses the nucleic acid sequence is modulated.
XX CC The composition is useful in diagnosing, prognosing, preventing and/or
XX CC treating cancer. The nucleic acid sequence may be used in monitoring
XX CC genetic abnormalities, in generating and characterising domain-specific
XX CC antibodies, for identifying agents or cellular factors that bind to a
XX CC protein, and in therapeutic and diagnostic contexts, such as diagnostic
XX CC assay, cancer vaccine, and methods of preparing vaccines. The present
XX CC sequence is a primer used to identify the cancer associated coding
XX CC sequences suitable to be modulated in the method of the invention

XX PT New polynucleotide designated 205PIB5, for diagnosing and treating
XX PT prostate cancer, and as probes or primers for the amplification and/or
XX PT detection of 205PIB5 genes.
XX Example 1; SEQ ID NO 714; 162bp; English.
XX PS
XX CC This invention relates to a novel gene designated 205PIB5, and the
XX CC encoded protein, which is aberrantly expressed in prostate cancer.
XX CC Specifically, it refers to the two variants of 205PIB5 mapped to
XX CC chromosome 8p21-8p12, namely 205PIB5v1 and 205PIB5v2 and fragments
XX CC thereof that serve as useful diagnostic, prophylactic, prognostic and/or
XX CC therapeutic targets for prostate and other types of cancers. The present
XX CC invention describes methods for the isolation of 205PIB5, for generating
XX CC an immune response and for generating transgenic or knock out animals for
XX CC the development and screening of therapeutically useful reagents.
XX CC Furthermore, it refers to identifying proteins, small molecules or other
XX CC agents that interact with 205PIB5, and can be used to identify pathways
XX CC activated by 205PIB5. Accordingly, these are cytostatic and immunogenic
XX CC compositions that are useful for the development of cancer vaccines. This
XX CC oligonucleotide sequence is the cDNA synthesis primer designated DPNCND
XX CC used in an exemplification of the invention.

XX PT Composition comprising a substance that modulates the status of 121PIF1,
XX PT useful in diagnosing, preventing, prognosticating or treating patients
XX PT with cancer that expresses 121PIF1, such as breast, colon, ovarian or
XX PT lung cancer.
XX Example 1; Page 71; 285bp; English.
XX PS
XX CC The present invention describes a composition (I) comprising a substance
XX CC that modulates the status of 121PIF1 (gene and encoded protein), or a
XX CC molecule that is modulated by 121PIF1, where the status of a cell that
XX CC expresses 121PIF1 is modulated. The human 121PIF1 gene maps to chromosome
XX CC 4q. (I) has cytostatic activity, and can be used in gene therapy, and in
XX CC vaccines. The composition (I) can be used for diagnosing, preventing,
XX CC prognosticating or treating patients with cancer that expresses 121PIF1,
XX CC such as breast, colon, ovarian or lung cancer. The 121PIF1 gene or its
XX CC fragment can be used to elicit a humoral or cellular immune response.
XX CC 121PIF1 antibodies can be used in active or passive immunisation. 121PIF1
XX CC polynucleotides are useful as probes and primers for the amplification or
XX CC detection of 121PIF1 genes, as coding sequences for directing the
XX CC expression of 121PIF1 polypeptides, or as tools for modulating or
XX CC inhibiting the expression of 121PIF1 genes. The present sequence is used
XX CC in the exemplification of the present invention.

PT New composition comprising a substance that modulates the status of
PT 121P2A3 polypeptides, useful for eliciting humoral or cellular immune
PT responses or in assessing the status of 121P2A3 gene products in normal
PT versus cancerous tissues.
XX
PS Example 1; Page 70; 362pp; English.
XX
CC The invention relates to a novel composition comprising a substance that
CC modulates the status of a protein, 121P2A3. The composition of the
CC invention has cytostatic and immunostimulant activity, and is useful as a
CC vaccine. The 121P2A3 proteins and polynucleotides are useful for
CC eliciting humoral or cellular immune response. The polynucleotides are
CC useful for characterizing cytogenetic abnormalities of this chromosomal
CC locus, as tools that can be used to delineate cytogenetic abnormalities
CC in the chromosomal region that encodes 121P2A3 that may contribute to
CC malignant phenotype, and in assessing the status of 121P2A3 gene products
CC in normal versus cancerous tissues. The proteins are useful for
CC generating and characterizing domain-specific antibodies, for identifying
CC agents or cellular factors that bind to 121P2A3 or a particular structure
CC domain, and in various therapeutic and diagnostic contexts, including
CC cancer vaccines. The antibodies or T cells reactive with the product are
CC useful in passive or active immunisation, and in imaging methodologies
CC for the management of cancer. The present sequence represents the primer
CC DPNCDN, used in the invention to synthesise cDNA from RNA extracted from
CC xenograft tissue

XX
XX A composition useful for detecting, preventing or treating cancer (e.g.
PT prostate cancer) comprises a substance that modulates the status of
PT 238P1B2, or a molecule that is modulated by 238P1B2.
XX
PS Example 1; Page 68; 315pp; English.
XX

CC The invention relates to a novel composition comprising a substance that
CC modulates the status of 238P1B2, or a molecule that is modulated by
CC 238P1B2. The invention further relates to: a non-human transgenic animal
CC that produces an antibody; a hybridoma that produces an antibody;
CC delivering a cytotoxic agent or a diagnostic agent to a cell that
CC expresses 238P1B2; a polynucleotide that encodes a peptide; a
CC pharmaceutical composition that comprises the composition cited above, in
CC a human unit dosage form, where the substance comprises: a ribozyme that
CC cleaves a polynucleotide having 238P1B2 coding sequence or a nucleic acid
CC molecule that encodes the ribozyme, and a carrier; or human T-cells that
CC specifically recognise a 238P1B2 peptide sequence in the context of a
CC particular HLA molecule; inhibiting growth of cancer cells that express
CC 238P1B2; generating a mammalian immune response directed to 238P1B2; an
CC assay for detecting the presence of a 238P1B2-related protein or
CC polynucleotide in a biological sample; and monitoring the presence of
CC cancer in an individual. The novel composition has cytostatic activity.
CC The 238P1B2 polynucleotide can be used in gene therapy to treat
CC disorders. The 238P1B2 polypeptide can be used in the creation of a
CC vaccine. The composition and methods are useful in detecting, preventing,
CC prognosing or treating cancer (e.g. prostate cancer). The genes, proteins
CC or antibodies can be used to elicit a humoral or cellular immune
CC response. The polynucleotide may be used as a probe or a primer, or in
CC chromosomal mapping. This polynucleotide represents a primer used in the
CC exemplification of the invention.

XX New composition comprising 191P4D12(b) proteins and polynucleotides,
PT useful in diagnosing, preventing and treating cancer, e.g. prostate,
PT bladder, kidney, colon, lung, pancreas or ovary and in eliciting a
PT humoral or cellular immune response.
XX

XX Example 1; SEQ ID NO 48; 443bp; English.

PS The present invention relates to novel compositions comprising peptides
 CC (ADK83300-ADK90584) from 191P4D12(b) and related proteins. It was found
 CC that 191P4D12(b), which maps to chromosome 1q22-q23.2, is aberrantly
 CC expressed in a number of cancers and so the compositions of the invention
 CC are useful in diagnosing, preventing and treating cancer, e.g. cancer of
 CC the prostate, bladder, kidney, colon, lung, pancreas, ovary, breast,
 CC uterus or cervix and in eliciting a humoral or cellular immune response.
 CC To isolate genes that are overexpressed in prostate cancer, the
 CC Suppression Subtractive Hybridisation (SSH) method was used, using cDNA
 CC derived from prostate cancer tissues. The present sequence was used in an
 CC example from the invention for SSH-generated isolation of cDNA fragments
 CC of the 191P4D12(b) gene.

XR; Site 1: Eco-RI; Site 2: Xho-I; Shoot tips (including
apex, primary stem and developing leaves up to and
including LPI 1) and whole stems (wood and bark)
undergoing secondary growth taken from between LPI 8 and
LPI 15. Pooled sample of tissues harvested every two hours
during one 12 hour light/12 hour dark cycle, beginning 1
hour before the beginning of the light cycle, and ending 3
hours after the end of the light cycle. cDNA was prepared
from 5 Ng of poly A+ selected RNA and was directionally
ligated into the pluescript II SK (+) XR vector
(stratagene), transformed by electroporation into DH10B
cells (in vitro) for propagation"

obtained from a cell line derived from grade I
chondrosarcoma tissue. The library was constructed and
normalized according to Bonaldi, Lennon and Soares, Genome
Research, 6:791-806, 1996. First strand cDNA synthesis was
primed with an oligo-dT primer containing a Not I site.
Double stranded cDNA was ligated to an EcoR I adaptor,
digested with Not I, and cloned directionally into
pT73-Pac vector. The oligonucleotide used to prime the
synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
(dT)18 tail. The sequence tag for this library is
AGAAATCCGCGC. The cell line was provided by Dr. James Martin
from the University of Iowa.

normalized according to Bonaldi, Lennon and Soares, Genome
Research, 6:791-806, 1996. First strand cDNA synthesis was
primed with an oligo-dT primer containing a Not I site.
Double stranded cDNA was ligated to an EcoR I adaptor,
digested with Not I, and cloned directionally into
pT73-Pac vector. The oligonucleotide used to prime the
synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
(dT)18 tail. The sequence tag for this library is
AGAAATCCGCGC. The cell line was provided by Dr. James Martin
from the University of Iowa.

This is the 5' sequence of the clone insert. Clone from S. Wiemann,
Molecular Genome Analysis, German Cancer Research Center (DKFZ);
Email s.wiemann@dkfz-heidelberg.de; sequenced by Medigenomix
(Martinsried/Germany) within the cDNA sequencing consortium of the
German Genome Project. This clone (DKFZp469H2329) is available at
the RZPD Deutsches Ressourcenzentrum fuer Genomforschung GmbH in
Berlin, Germany. Please contact RZPD for ordering:
http://www.rzpd.de/cgi-bin/products/cl.cgi?cloneid=DKFZp469H2329
Further information about the clone and the sequencing project is
available at http://mips.gsf.de/projects/cdna/.

F2, F3, and F4 lines of Aquilegia formosa x A. pubescens
were grown from seed in greenhouses at UC Santa Barbara.
From these plants three sets of tissue were collected: 1)
Small flower buds (<10 mm) and very young inflorescences
(71 & 29% by weight respectively), 2) Medium (7-20 mm) and
large (at or near anthesis) flower buds (65 & 35% by
weight respectively) and 3) Shoot apical meristems. A
fourth set of tissue was collected from plants of A.
formosa. These plants were grown from seed in sand and at
approximately 1 month root tissue and leaf tissue of
various developmental stages were collected (84 & 16% by
weight respectively). Total RNA was extracted from each
set of tissue and pooled in the following proportions:
1.5X from sets 1 & 2, 1X from sets 3 & 4. From the pooled
total RNA, mRNA was extracted and enriched for full-length
messages and then normalized with proprietary methods by
Invitrogen."

/note="Vector: FMD42nv; Purified genomic DNA from M.
musculus C57BL/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resource
(http://www.jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of pMD42 (g14732114|gb|AF129072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XL10-Gold (Stratagene) cells
and selected for ampicillin resistance."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

----- Genome Center
Center: Baylor College of Medicine
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help.tmc.edu

----- Project Information
Center project name: FKBA
Center clone name: CH240-175C7
----- Summary Statistics
Sequencing vector: plasmid;
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 55091 bases at least Q40
Consensus quality: 58158 bases at least Q30
Consensus quality: 60554 bases at least Q20
Estimated insert size: 67341; sum-of-coverage estimation
Estimated insert size: 62018; agarose-fp estimation
Quality coverage: 1x in Q20 bases; agarose-fp estimation
Quality coverage: 1x in Q20 bases; sum-of-coverage estimation

----- NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 16 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*

             Submitted (09-NOV-2002) Human Genome Sequencing Center, Department
             of Molecular and Human Genetics, Baylor College of Medicine, One
             Baylor Plaza, Houston, TX 77030, USA
COMMENT      On Nov 9, 2002 this sequence version replaced gi:23195541.
             The sequence in this assembly is a combination of BAC based reads
             and whole genome shotgun sequencing reads assembled using Atlas
             (http://www.hgsc.bcm.tmc.edu/projects/rac/). Each contig described
             in the feature table below represents a scaffold in the Atlas
             assembly ('a'='contig-scaffold'). Within each contig-scaffold,
             individual sequence contigs are ordered and oriented, and separated
             by sized gaps filled with Ns to the estimated size. The sequence
             may extend beyond the ends of the clone and there may be sequence
             contigs within a contig-scaffold that consist entirely of whole
             genome shotgun sequence reads. Both end sequences and whole genome
             shotgun sequence only contigs will be indicated in the feature
             table.

-----
NOTICE: This sequence may not represent the entire insert of this
clone. It may be shorter because we only sequence overlapping
clone sections once, or longer because we provide a small overlap
between neighboring data submissions.
This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate

```

chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see <http://www.nhgri.nih.gov/DIR/GRB/CHR7>, send <mailto:egreen@nhgri.nih.gov>, or see <http://genome.wustl.edu/gsc>

SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Moon, P.Y., Zhao, B., Frengen, E., Tatenou, M., Catanese, V.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (<http://bacpac.med.buffalo.edu>)

VECTOR: pBAC3.6

NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is RP5-876K2, 200 bp overlap. Actual start of this clone is at base position 94341 of RP5-876K2; actual end is at base position 140150 of RP11-312C1.

Fax: 6172580903
Email: mczody@broad.mit.edu
Primer A: No sequence submitted
Primer B: No sequence submitted
STS size: 628

Protocol:
23,021,928 chimpanzee whole genome shotgun reads were aligned to the Human genome NCBI Build 34 (hg16, July 2003). Chimp WGS reads were from 9 donors, including Clint (Pan troglodytes verus), 3 other Pan troglodytes versus chimps (Donald, Karlien, Yvonne), 3 Pan troglodytes troglodytes chimps (Noemie, Masuku, Clara) and 2 chimps of unknown origin (Gon, Unknown Chimp). Common names: Pan troglodytes versus is the western chimp and Pan troglodytes troglodytes is the central chimp. To be included in chimpanzee SNP discovery, a read must be at least 500bp in length, at least 50% of its base calls must have phred score >= 20, at least 30% of its base calls must satisfy SNQS(30,25) (single strand NQS, the base in question has phred score >= 30, the surrounding 10 bases in the read have phred score >= 25), and the read must have at least 200 bp SNQS(30,25) bases. Reads not uniquely placed in the genome and read pairs whose two ends were not consistently placed were discarded. After above filtering, NQS(30,25) standard was applied to all pairs of overlapping reads to call NQS bases and SNPs. Alignments (between two reads) with less

than 100 NQS bases or with SNP rate > 0.01 were discarded. To exclude alignment between two copies of a single read, comparisons between two reads that share 95% of their genome alignments (>=95% bases of read A and >=95% bases of read B were placed at the same locus of human genome) were discarded.

** NOTE: This is a 'working draft' sequence. It currently
** consists of 26 contigs. The true order of the pieces
** is not known and their order in this sequence record is
** arbitrary. Gaps between the contigs are represented as

```

```
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*
1      1830: contig of 1830 bp in length
*      1831      1930: gap of unknown length
*      1931      2990: contig of 1060 bp in length
*      2991      3090: gap of unknown length
*      3091      4056: contig of 966 bp in length
*      4057      4156: gap of unknown length
*      4157      5150: contig of 994 bp in length
*      5151      5250: gap of unknown length
*      5251      6043: contig of 793 bp in length
*      6044      6143: gap of unknown length
*      6144      7023: contig of 880 bp in length
*      7024      7123: gap of unknown length
*      7124      8236: contig of 1113 bp in length
*      8237      8336: gap of unknown length
*      8337      9615: contig of 1279 bp in length
*      9616      9715: gap of unknown length
*      9716      10938: contig of 1223 bp in length
*      10939      11038: gap of unknown length
*      11039      12497: contig of 1459 bp in length
*      12498      12597: gap of unknown length
*      12598      13931: contig of 1334 bp in length
*      13932      14031: gap of unknown length
*      14032      16464: contig of 2433 bp in length
*      16465      16564: gap of unknown length
*      16565      18712: contig of 2148 bp in length
*      18713      18812: gap of unknown length
*      18813      20468: contig of 1656 bp in length
*      20469      20568: gap of unknown length
*      20569      23047: contig of 2479 bp in length
*      23048      23147: gap of unknown length
*      23148      26681: contig of 3534 bp in length
*      26682      26781: gap of unknown length
*      26782      31099: contig of 4318 bp in length
*      31100      31199: gap of unknown length
*      31200      36348: contig of 5149 bp in length
*      36349      36448: gap of unknown length
*      36449      41923: contig of 5475 bp in length
*      41924      42023: gap of unknown length
*      42024      48370: contig of 6347 bp in length
*      48371      48470: gap of unknown length
*      48471      53746: contig of 5276 bp in length
*      53747      53846: gap of unknown length
*      53847      58556: contig of 4710 bp in length
*      58557      58656: gap of unknown length
*      58657      67011: contig of 8355 bp in length
*      67012      67111: gap of unknown length
*      67112      79048: contig of 11937 bp in length
*      79049      79148: gap of unknown length
*      79149      90009: contig of 10861 bp in length
*      90010      90109: gap of unknown length
*      90110      96008: contig of 5899 bp in length.

 COMMENT ----- Genome Center
 Center: Washington University Genome Sequencing Center
 Center code: WUGSC
 Web site: http://genome.wustl.edu/gsc
 Contact: saplens@watson.wustl.edu
 ----- Summary Statistics
 Center project name: H_NH035SH11
 Drafting Center: WIBR

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
 all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
 Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu/gsc>

SOURCE INFORMATION:
 The RP11-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, B., Tateno, M., Cataneese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>
 VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:
 The clone sequenced to the right is RP11-240A16, 2000 bp overlap. Actual start of this clone is at base position 1 of RP11-35SH11; actual end is at base position 80018 of RP11-240A16.

There is an unresolved base at 67647.

The sequence of AC024662 has been incorporated into AC093811.

COMMENT      On Jul 12, 2004 this sequence version replaced gi:47522601.
            Genes were predicted from the integrated results of the following:
            GENSCAN (http://CCR-081.mit.edu/GENSCAN.html), FGENESH
            (http://www.softberry.com/), GeneMark (
            http://opal.biology.gatech.edu/GeneMark/), GLIMMER
            (http://www.cigr.org/cdb/glimmer/glimr_form.html), RICEHMM
            (http://rtp.dna.affrc.go.jp/RiceHMM/), SplicePredictor
            (http://bioinformatics.iastate.edu/cgi-bin/gp.cgi), slm4
            (http://globin.cse.psu.edu/html/docs/slm4.html), gap2

```

(<http://www.tigr.org/software/glimmer/>), BLASTN and BLASTX. The genomic sequence was searched against NCBI NonRedundant Protein database, nr (<ftp://ncbi.nlm.nih.gov/blast/db>) and the cDNA sequence database at RGP or DBJ. Protein homologues of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP. ESTs represent the identified cDNA sequences using BLASTN with the corresponding DBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified cDNA sequences using BLASTN with the corresponding DBJ accession no. A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.

The orientation of the sequence is from M13rev to -21M13 of the BAC clone. This sequence of OJ1538_H05 clone has an overlap with OSJNB0075E08 clone (DBJ: AP005653) at 5' end and an overlap with OSJNB0055113 (DBJ: AP005648) at 3' end. The sequence was generated by combining Monsanto and RGP-Japan sequencing data. Detailed information on overlap and assembly quality together with annotation of this entry is available at <http://rgp.dna.affrc.go.jp/GenomesSeq.html>.

Center code: WUGSC
Web site: http://genome.wustl.edu
Contact: submissions@watson.wustl.edu
----- Summary Statistics
Center project name: M_BB0378106
-----

NOTICE: This sequence may not represent the entire insert of this
clone. It may be shorter because we only sequence overlapping
clone sections once, or longer because we provide a small overlap
between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu

SOURCE INFORMATION:
The RP24-37816 BAC library has been constructed by Pieter de Jong and
coworkers (http://www.chori.org) from male C57BL/6J mouse spleen
and/or brain genomic DNA. The clone and detailed information can be
obtained from Pieter de Jong and coworkers at http://www.chori.org

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone. This clone is
overlapped by AC122502.

COMMENT
      The Chimpanzee Chromosome 22 Sequencing Consortium consists of:
      *Chinese National Human Genome Center at Shanghai, Shanghai, China;
      *GBF, Dept. of Genome Analysis, Braunschweig, Germany; *Institute
      of Molecular Biotechnology, Jena, Germany; *KRIBB Genome Research
      Center, Daejeon, Korea;
      *Max-Planck-Institute for Molecular Genetics, Berlin, Germany;
      *National Institute of Genetics, Mishima, Japan;
      *National Yang Ming University Genome Research Center, Taipei,
      Taiwan;
      *RIKEN Genomic Sciences Center, Yokohama, Japan.

      ----- Project Information
      Center project name: The Chimpanzee Chromosome 22 Sequencing Project
      Center clone name: RP43-021P14
      ----- Summary Statistics
      Sequencing vector: pUC18, 100% of reads
      Chemistry: Dye-terminator Big Dye and ET, 100% of reads Assembly
      Program: Phrap; version 0.990329
      Consensus quality: 183135 bases at least Q40
      Consensus quality: 184057 bases at least Q20
      Consensus quality: 184465 bases at least Q20
      Quality coverage: 11.5x
      -----
      This sequence was finished as follows unless otherwise noted: all
      regions were double stranded, sequenced with an alternate

```

```

chemistry, or covered by high quality data (i.e., phred quality >=
30);
an attempt was made to resolve all sequencing problems, such as
compressions and repeats; all regions were covered by at one
plasmid
subclone or more than one M13 subclone;
and the assembly was confirmed by restriction digest.
-----
Source Information:
The RP43 chimpanzee BAC library was prepared from DNA isolated from
cultured cells established from the blood of a single male
chimpanzee.
Clones may be obtained from Asao Fujiyama and co-workers
(http://www.gsc.riken.go.jp).
VECTOR: pBACe3.6
Sequence Quality Assessment:
This entry has been annotated with sequence
estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than 1 error in
10,000 bp.
-----
Neighboring clones: PTB-022L04 (left) and RP43-042E01 (right).

Contact: sapiens@wustl.wustl.edu
----- Summary Statistics
Center project name: H_NH0240A16

NOTICE: This sequence may not represent the entire insert of this
clone. It may be shorter because we only sequence overlapping
clone sections once, or longer because we provide a small overlap
between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
McPherson, Department of Genetics, Washington University, St. Louis
MO. For additional information about the map position of this
sequence, see <http://genome.wustl.edu/gsc>

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male
donor, as described by Osoegawa, K., Moon, P.Y., Zhao, B., Frengen, B.,
Tateiro, M., Cataneese, J.J. and de Jong, P.J. (1998) An improved
approach for construction of bacterial artificial chromosome
libraries. Genomics 51:1-8. The clone may be obtained either from
Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong
and coworkers at the Roswell Park Cancer Institute
(<http://bacpac.med.buffalo.edu>)
VECTOR: pBACe3.6
NEIGHBORING SEQUENCE INFORMATION:
Actual start of this clone is at base position 1 of RP11-240A16;
actual end is at base position 196721 of RP11-240A16.

The sequence H_NH0240A16 from base position 157677 to 158503
contains a tandem repeat. The assembly is consistent with digest
information but the sequence fidelity cannot be guaranteed.

 Rat Genome Sequencing Consortium.
 Direct Submission
 Submitted (15-NOV-2002) Human Genome Sequencing Center, Department
 of Molecular and Human Genetics, Baylor College of Medicine, One
 Baylor Plaza, Houston, TX 77030, USA
 On Nov 15, 2002 this sequence version replaced gi:23194733.
 The sequence in this assembly is a combination of BAC based reads
 and whole genome shotgun sequencing reads assembled using Atlas
 (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
 in the feature table below represents a scaffold in the Atlas
 assembly (a 'contig-scaffold'). Within each contig-scaffold,
 individual sequence contigs are ordered and oriented, and separated
 by sized gaps filled with Ns to the estimated size. The sequence
 may extend beyond the ends of the clone and there may be sequence
 contigs within a contig-scaffold that consist entirely of whole
 genome shotgun sequence reads. Both end sequences and whole genome
 shotgun sequence only contigs will be indicated in the feature
 table.

 ----- Project Information
 Center project name: GWSN
 Center clone name: CH230-92A9
 ----- Summary Statistics
 Assembly program: Phrap; version 0.990329
 Consensus quality: 210154 bases at least Q40
 Consensus quality: 211654 bases at least Q30
 Consensus quality: 213068 bases at least Q20
 Estimated insert size: 217760; sum-of-contigs estimation
 Quality coverage: 7x in Q20 bases; sum-of-contigs estimation

 * NOTE: Estimated insert size may differ from sequence length
 * (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 1 contigs. Gaps between the contigs
 * are represented as runs of N. The order of the pieces
 * is believed to be correct as given, however the sizes
 * of the gaps between them are based on estimates that have
 * provided by the submitter.
 * This sequence will be replaced
 * by the finished sequence as soon as it is available and
 * the accession number will be preserved.
 * 220407; contig of 220407 bp in length.

Center project name: M_BA0246A19

NOTICE: This sequence may not represent the entire insert of this
clone. It may be shorter because we only sequence overlapping
clone sections once, or longer because we provide a small overlap
between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu

SOURCE INFORMATION:
The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa
and Minko Tateno in the laboratory of Pieter de Jong
(http://www.chori.org) from female C57BL/6J mouse kidney and/or
brain genomic DNA. The clone and detailed information can be
obtained from Research Genetics, Inc. (http://www.resgen.com) or
Pieter de Jong and coworkers at http://www.chori.org

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

Rat Genome Sequencing Consortium.
Direct Submission
Submitted (03-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Sep 14, 2002 this sequence version replaced gi:2277017.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Rat Genome Sequencing Consortium.
Direct Submission
Submitted (13-MAY-2003) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA

COMMENT

On May 13, 2003 this sequence version replaced gi:23610443.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

coverage: 12.35x in Q20 bases; agarose-fp

* NOTE: This is a 'working draft' sequence. It currently
* consists of 47 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will

```
* be preserved.
* 1 94669: contig of 94669 bp in length

JOURNAL
COMMENT      Submitted (30-SEP-2000) Whitehead Institute/MIT Center for Genome
              Research, 320 Charles Street, Cambridge, MA 02141, USA
              All repeats were identified using RepeatMasker:
              Smit,A.F.A. & Green, P. (1996-1997)
              http://ftp.genome.washington.edu/RM/RepeatMasker.html

Contact: sequence submissions@genome.wi.mit.edu
-----Project Information
Center project name: L11230

```

Center clone name: 481_C8

* NOTE: This record contains 84 individual
 * sequencing reads that have not been assembled into
 * contigs. Runs of N are used to separate the reads
 * and the order in which they appear is completely
 * arbitrary. Low-pass sequence sampling is useful for
 * identifying clones that may be gene-rich and allows
 * overlap relationships among clones to be deduced.
 * However, it should not be assumed that this clone
 * will be sequenced to completion. In the event that
 * the record is updated, the accession number will
 * be preserved.

```

Center clone name: 481_C_8
-----
* NOTE: This record contains 84 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for

```

```
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

----- Summary Statistics

Center project name: H_NH0810P08
Drafting Center: WIBR

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu/gsc>

SOURCE INFORMATION:
The RPCT-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Moon, P.Y., Zhao, B., Frengen, E., Tateo, M., Cataneese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pletier de Jong and coworkers at <http://www.chori.org>
VECTOR: pBAC3.6

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-123G5; the clone sequenced to the right is RP11-125018, 2000 bp overlap. Actual start of this clone is at base position 1 of RP11-810P8; actual end is at base position 33102 of RP11-125018.

FEATURES
The sequence of AC022697 has been incorporated into AC096773.

```

NOTICE:

This sequence was finished as follows unless otherwise noted:

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P. Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J. J., and de Jong, P. J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. *Genomics* 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>

VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:

Actual start of this clone is at base position 1 of RP11-18N21; actual end is at base position 161391 of RP11-18N21.

Summary Statistics

Sequencing vector: M13; M77815; 100% of reads

Chemistry: Dye-terminator Big Dye; 100% of reads

Assembly program: Phrap; version 0.960731

Consensus quality: 157821 bases at least Q40

Consensus quality: 161489 bases at least Q30

Consensus quality: 162773 bases at least Q20

Insert size: 170000; agarose-gel

Insert size: 163588; sum-of-contigs

Quality coverage: 4.4 in Q20 bases; agarose-gel

Quality coverage: 4.6 in Q20 bases; sum-of-contigs

NOTE: This is a 'working draft' sequence. It currently consists of 15 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

 Project Information
 Center project name: L9971
 Center clone name: 78_L3

* NOTE: This record contains 79 individual
 * sequencing reads that have not been assembled into
 * contigs. Runs of N are used to separate the reads
 * and the order in which they appear is completely
 * arbitrary. Low-pass sequence sampling is useful for
 * identifying clones that may be gene-rich and allows
 * overlap relationships among clones to be deduced.
 * However, it should not be assumed that this clone
 * will be sequenced to completion. In the event that
 * the record is updated, the accession number will
 * be preserved.

Center clone name: 5g_K_8

* NOTE: This record contains 80 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

RESULT 50
AC106873/c 99596 bp DNA linear PRI 31-JAN-2004
LOCUS Homo sapiens BAC clone RP11-374W7 from 7, complete sequence.
DEFINITION AC106873
ACCESSION AC106873
VERSION AC106873.3 GI:18698877
KEYWORDS HTG.
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini;
Homidae; Homo.
1 (bases 1 to 99596)

Contact: sapiens@genome.wustl.edu
----- Summary Statistics
Center project name: H_NH0374M07

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see <http://www.nhgri.nih.gov/DIR/GRB/CHR7>, send <mailto:egreen@nhgri.nih.gov>, or see <http://genome.wustl.edu>

SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Moon, P.Y., Zhao, B., Frengen, B., Tatenoe, M., Catanesse, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. *Genomics* 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>

VECTOR: pBACe3.6

PT Nucleic acid, useful for diagnosis and therapy of diseases associated
PT with cell signaling e.g. cancer, comprises chemically modified genomic
PT sequences of genes associated with cell signaling.
XX
PS Claim 1; SEQ ID NO 433; 24pp + Sequence Listing; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of at least
CC 18 bases of a segment of chemically pretreated DNA of genes associated
CC with cell signaling. The activity of the modified sequences of the
CC invention may be described as cytostatic. The object of the invention is
CC to provide the chemically modified DNA of genes associated with cell
CC signaling, as well as oligonucleotides and/or PNA-oligomers for
CC detecting cytosine methylations, as well as a method which is
CC particularly suitable for the diagnosis and/or therapy of genetic and
CC epigenetic parameters of genes associated with cell signaling. The
CC chemically modified DNA provided by the invention is useful for diagnosis
CC and therapy of diseases such as solid tumours and cancer. The sequences
CC given in records ABU70111-ABU70626 represent chemically pre-treated
CC genomic DNA's of genes associated with cell signaling. Note: The
CC sequence data for this patent is not represented in the printed
CC specification, but is based on sequence information supplied by the
CC European Patent Office

PT New recombinant DNA construct, useful for improving plant tolerance to
PT cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or
PT pests, for conferring increased resistance to plant disease, or for
PT improving yield.
XX
PS Claim 1; SEQ ID NO 14574; 15pp; English.
XX
CC The invention describes a recombinant DNA construct comprising a
CC polynucleotide consisting of a sequence encoding an amino acid sequence
CC available in electronic form from the US patent office at
CC ftp.segdata.uspto.gov/sequence.html?docid:2004034888. The polynucleotide
CC of the invention are also useful in physical arrays of molecules and as
CC plant breeding markers. The recombinant DNA construct is useful for
CC improving plant tolerance to cold, heat, drought, herbicides, extreme
CC osmotic conditions, pathogens or pests, for manipulating growth rate in
CC plant cells by modification of the cell cycle pathway, for conferring
CC increased resistance to plant disease, for producing galactomannan,
CC lignin or plant growth regulators, for increasing the rate of homologous
CC recombination in plants, for improving yield by modification of
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC or by providing improved plant growth and development under at least one
CC stress condition or for modifying seed oil or protein yield and/or
CC content. This sequence represents a plant full length insert
CC polynucleotide that can be used in the recombinant DNA construct of the
CC invention.

XX
XX Isolated nucleotide sequences of Neisseria meningitidis which can be used
XX in the diagnosis and treatment of N. meningitidis infection and other
XX Neisserial infections, for example, N.gonorrhoea.
XX
XX Claim 7; Page 1496; 1760pp; English.
XX
XX The present invention describes methods of obtaining immunogenic proteins
XX from Neisseria genomic sequences. AAAB1453 to AAAB2414 represent
XX specifically claimed Neisseria meningitidis genomic DNA sequences;
XX AAAB1260 to AAAB1303 and AAB25620 to AAB25663 represent Neisseria DNA
XX sequences and their corresponding proteins; AAAB1254 to AAAB1259 and
XX AAAB1304 to AAAB1321 represent PCR primers used in the isolation of
XX Neisseria meningitidis DNA sequences; and AAAB1322 to AAAB1452 represent
XX Neisseria meningitidis MenB polynucleotide ORF sequences, which are all
XX used in the exemplification of the present invention. The nucleic acid
XX sequences, protein sequences, and antibodies against them, can be used in
XX the manufacture of a composition. The composition can be used as a
XX medicament (or in the manufacture of a medicament) for treating,
XX preventing or diagnosing infection due to Neisserial bacteria. For
XX example, some of the identified proteins could be components of vaccines
XX against Meningococcus B; against all serotypes; and/or against all
XX pathogenic Neisseriae. Identification of sequences from the Bacterium
XX will also facilitate production of biological probes, particularly
XX organism-specific probes. Attempts to make efficacious Meningococcus B
XX vaccines have failed mainly due to antigen tolerance. Multivalent
XX vaccines have also been tried but none have successfully overcome

CC antigenic variability. The provision of further, complete sequences may
CC provide an opportunity to identify secreted or surface exposed proteins
CC that may be presumed targets for the immune system and which are not
CC antigenically variable or at least more conserved than other more
CC variable regions

XX
XX New recombinant DNA construct comprising a promoter positioned to provide
XX PT for expression of a polynucleotide encoding a polypeptide from a
XX PT microbial source, useful for producing plants with improved properties.
XX
XX Claim 1; SEQ ID NO 30132; 122pp; English.
XX
XX The invention relates to a recombinant DNA construct comprising a
XX CC promoter functional in a plant cell, where the promoter is positioned to
XX CC provide for expression of a polynucleotide encoding a polypeptide from a
XX CC microbial source. The invention also relates to a transformed plant
XX CC comprising the recombinant DNA construct and a method of producing a
XX CC transforming plant having an improved property. The plant is a crop plant
XX CC such as maize or soybean. The method of producing a transformed plant
XX CC having an improved property comprises transforming a plant with the
XX CC recombinant DNA construct and growing the transformed plant, where the
XX CC polynucleotide or polypeptide is useful for improving plant properties.
XX CC The recombinant DNA construct is useful for producing plants with
XX improved plant properties, e.g. improved cold, heat or drought tolerance,

CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC increased resistance to plant disease, better growth rate by modification
CC of the cell cycle pathway with plant growth regulators, increased rate of
CC homologous recombination, modified seed oil or protein yield and/or
CC content, improved yield by modification of carbohydrate, nitrogen or by
CC phosphorus use and/or uptake, by modification of photosynthesis or by
CC providing improved plant growth and development under at least one stress
CC condition, improved lignin production or improved galactomannan
CC production, This sequence represents a bacterial polynucleotide used in
CC the scope of the invention. Note: The sequence data for this patent did
CC not form part of the printed specification but was obtained in electronic
CC format from USPTO at seqdata.uspto.gov/sequence.html.

PT Novel nucleic acid useful for diagnosis and therapy of diseases
XX associated with development genes such as diabetes, comprises a sequence
XX of a segment of chemically pretreated DNA of genes associated with
XX development.
XX
PS Claim 1; SEQ ID NO 17; 27pp; English.
XX
CC The invention relates to a nucleic acid (I) comprising a sequence at
CC least 18 bases in length of a segment of chemically pretreated DNA (II)

CC of genes associated with development selected from 87 genes listed in the
CC specification such as ACPN, ADPN, or APD1 and comprising one of 350
CC sequences (ABN79984-ABN80333) or their complements. The invention is
CC useful for the diagnosis or therapy of diseases associated with
CC development genes, in particular disease related to homeobox containing
CC genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes
CC associated with congenital heart disease, epilepsy, diseases related to
CC histone deacetylation, Curranio syndrome, diseases related with the
CC development of the brain and limb girdle muscular dystrophy and dwarfism.
CC Oligomers specific to each of the genes are useful for detecting the
CC methylation state of all CpG dinucleotides within the 350 sequences or
CC (ii) and their complementary sequences, as primer oligonucleotides for
CC the amplification of the 350 sequences, (iii) and/or their complements and
CC as oligomer probes for detecting the cytosine methylation state and/or
CC single nucleotide polymorphisms (SNPs). Note: The sequence data for this
CC patent did not form part of the printed specification but is based on
CC sequence information supplied to Derwent by the European Patent Office

XX
XX Claim 1; SEQ ID NO 4; 24pp; English.
XX
XX The invention relates to a nucleic acid comprising a sequence at least 18
XX bases in length of a segment of the chemically pretreated DNA of genes
XX CC associated with pharmacogenomics according to one of the sequences of the
XX CC genes ALDH6 (NM 000693), CYP1A (NM 000781), CYP1B1 (NM 000497), CYP3A3
XX CC (NM 000776 and NM 017460), DYPD (NM 000110), EPHX2 (NM 001979), OCLN
XX CC (NM 002538), TXNRD1 (NM 003330), UGT8 (NM 003360), MRP (NM 004996,
XX CC NM 019900, NM 019901, NM 019902, NM 019862, NM 019898, NM 019899) and
XX CC their complementary sequences, or a sequence (51) chosen from 87
XX CC sequences and their complements. The chemical pretreatment is bisulphite
XX CC treatment to convert cytosines (but not methyl-cytosines) into uracils.
XX CC Also included are an oligomer (ii) in particular an oligonucleotide or a
XX CC peptide nucleic acid (PNA)-oligomer, comprising in each case at least one
XX CC base sequence having a length of 9 nucleotides which hybridises to or is
XX CC identical to a chemically pretreated DNA of genes associated with
XX CC pharmacogenomics and their complements, arranged in an array for
XX CC analysing diseases associated with the methylation state (CpG) and/or
XX CC detecting SNPs (single nucleotide polymorphisms) of the 87 sequences. The
XX CC oligomers may also be used as PCR primers. The set of 87 nucleic acids
XX CC and their complements is useful for diagnosis and therapy of solid
XX CC tumours and cancer. The present sequence represents one the 87 DNA
XX CC sequences or its complement. Note: The sequence data for this patent did

CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

 PT Fragments of chemically modified genes associated with tumor suppressor
 PT genes and oncogenes, useful in designing primers and probes for analyzing
 PT diseases associated with cytosine methylation state e.g. cancer.
 XX
 PS Claim 1; SEQ ID NO 284; 27pp; English.
 XX
 CC The invention relates to a nucleic acid comprising a sequence of 18
 CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
 CC bisulphite, of genes associated with tumour suppression and oncogenes
 CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
 CC 500 are missing from the sequence listing) sequences (ss) and sequences
 CC complementary to (ss). The nucleic acid may be a peptide nucleic acid-
 CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
 CC probes for detecting the cytosine methylation state and/or single
 CC nucleotide polymorphisms and also to be used in an array for analysing
 CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
 CC probes can also be used in a method for ascertaining genetic and/or
 CC epigenetic parameters for the diagnosis and/or therapy of existing
 CC diseases or the predisposition to specific diseases, by analysing
 CC cytosine methylations. The parameters may be compared to another set of
 CC genetic and/or epigenetic parameters, the differences serving as basis
 CC for diagnosis and/or prognosis events which are disadvantageous to
 CC patients. The present sequence is one of the 533 genomic sequences
 CC derived from tumour suppressor genes and oncogenes. Sequences with even
 CC numbered Seq ID numbers are the complementary sequence of the
 CC corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
 CC 535, except for those whose partner sequence is missing). Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO

 PS Claim 1, SEQ ID NO 188, 32pp; English.
 CC
 XX
 CC The invention relates to a nucleic acid, which comprises a segment of the
 CC chemically pretreated DNA of genes associated with DNA transcription from
 CC one of 346 sequences, and an oligomer, in particular an oligonucleotide
 CC or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical
 CC to the chemically pretreated DNA of genes associated with DNA
 CC transcription. The set of oligomer probes are useful for detecting the
 CC cytosine methylation state and/or single nucleotide polymorphisms (SNPs)
 CC in a chemically pretreated genomic DNA. The nucleic acids are useful for
 CC diagnosing or treating diseases associated with DNA transcription
 CC (particularly with the methylation status), e.g. adenosine deaminase
 CC deficiency, viral infection, retroviral infection, Sezary syndrome,
 CC haematological disorders, immunological disorders, Werner syndrome,
 CC tuberculosis, developmental disorders, psoriasis, Rieger's syndrome,
 CC neurological disorders, neurodegenerative disorders, Maardenburg
 CC syndrome, Niemann-Pick disease, myelodysplastic syndrome, myocardial
 CC infarction, hypertension, angioedema, erythropoiesis, congenital heart
 CC disease, HDR syndrome, arthritis, polyglutamine disorders, solid tumours
 CC or cancer. Sequences ABR28127-ABR28472 represent DNA transcription
 CC associated genomic DNA molecules of the invention. Note: The sequence
 CC data for this patent did not form part of the printed specification but
 CC was obtained in electronic format directly from the European Patent
 CC Office

 PT Nucleic acid comprising fragment of chemically modified gene, useful for
 PT diagnosis and treatment of diseases associated with abnormal cytosine
 PT methylation.
 PS
 XX Claim 1; SEQ ID NO 1425; 32pp + Sequence Listing; German.
 CC The present invention provides a number of human immune system associated
 CC genes which are modified by the methylation of cytosines. The sequences
 CC can be used in the diagnosis and treatment of immune system disorders,
 CC including eye diseases such as retinopathy, neovascular glaucoma and
 CC macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
 CC leukemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
 CC rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
 CC diseases. The present sequence is a gene of the invention

 PT Detecting granulocyte activation by detecting differential expression of
 PT genes associated with granulocyte activation, which serves as diagnostic
 PT markers that is useful for monitoring disease states and drug toxicity.
 PS
 XX Claim 1; SEQ ID NO 133; 114pp; English.
 CC The invention relates to detecting (M1) granulocyte (GC) activation
 CC (GCA), by detecting the level of expression of gene(s) (Gs) identified by
 CC DNA chip analysis as given in the specification, and comparing the
 CC expression level to an expression level in an unactivated GC, where
 CC differential expression of Gs is indicative of GCA. Also included are
 CC modulating (M2) GA by contacting GC with an agent that alters the
 CC expression of at least one gene in Gs; (2) screening (M3) for an agent
 CC capable of modulating GCA or an inflammation (especially chronic) in a
 CC tissue, an allergic response in a subject, exposure of a subject to a
 CC pathogen or sterile inflammatory disease using the gene expression
 CC profile; (3) detecting (M4) an inflammation (especially chronic) in a
 CC tissue, an allergic response in a subject, exposure of a subject to a
 CC pathogen or sterile inflammatory disease, by detecting the level of
 CC expression in a sample of the tissue of gene(s) from Gs, where the level
 CC of expression of the gene is indicative of inflammation; (4) treating
 CC (M5) an inflammation (especially chronic) or in a tissue, an allergic
 CC response in a subject, exposure of a subject to a pathogen or sterile
 CC inflammatory disease, by contacting a tissue having inflammation with an
 CC agent that modulates the expression of gene(s) from Gs in the tissue. M1
 CC is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful
 CC for screening an agent capable of modulating GCA preferably in an
 CC inflammation in a tissue; M4 is useful for detecting an inflammation
 CC (especially chronic) in a tissue, an allergic response in a subject,
 CC exposure of a subject to a pathogen or sterile inflammatory disease (e.g.
 CC psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis,
 CC cardiac reperfusion injury, renal reperfusion injury, ARDS, adult
 CC respiratory distress syndrome, inflammatory bowel disease, Crohn's
 CC disease, ulcerative colitis, periodontal disease; also bacterial
 CC infection, viral infection, parasitic infection, protozoal infection,
 CC fungal infection and M5 is useful for treating one of the above
 CC conditions. The present sequence represents a gene differentially
 CC expressed in granulocytes. Note: The sequence data for this patent did
 CC not form part of the printed specification, but was obtained in
 CC electronic format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences

XX
XX Streptococcus pneumoniae proteins and related DNA - useful for screening
XX compounds for antibacterial activity.
XX
XX Claim 4; Page 86-87; 640pp; English.
XX
XX This invention describes novel isolated Streptococcus pneumoniae (see
XX CC polymuclonides (see AAY86173-286494) and their encoded proteins (see
XX CC AAY8792-Y86182). The DNA, vectors and host cells described in the method
XX CC of the invention are useful for the recombinant expression of the
XX CC polypeptides. The polypeptides are useful for treatment or prevention of
XX CC disease, or diagnosis of disease related to expression or activity of
XX CC such a polypeptide. They can also be used to screen for compounds which
XX CC interact with and inhibit or activate such a polypeptide. The
XX CC polypeptides (or DNA encoding them, via gene therapy) are also useful for
XX CC inducing an immunological response in a mammal. The antagonists are
XX CC useful to inhibit such bacterial polypeptides. The polypeptides are
XX CC particularly useful to identify antimicrobial compounds and antibiotics.
XX CC They are also useful to determine their role in pathogenesis of
XX CC infection, dysfunction and disease

XX
XX Novel Streptococcus pneumoniae proteins and related DNA - useful for
XX PT diagnosing anti-microbial agents for treatment of bacterial infections.
XX
XX Claim 4; Page 111; 483pp; English.
XX
XX This sequence encodes a Streptococcus pneumoniae protein that (based on
XX CC homology with a Lactobacillus helveticus protein) is an ISL2 protein, and
XX CC represents a DNA sequence of the invention. The DNA sequences were
XX CC isolated from Streptococcus pneumoniae strain 0100993 (NCIMB 40794). The
XX CC Streptococcus pneumoniae proteins of the invention can be used to
XX CC identify compounds which interact with and inhibit or activate the
XX CC activity of the proteins. Antagonists can be used to treat diseases
XX CC caused by S. pneumoniae proteins, through genetic immunisation. They can
XX CC also be used to induce an immunological response in a mammal by
XX CC inoculation with the S. pneumoniae proteins or delivery of the encoding
XX CC nucleic acids in a vector adequate to produce antibody and/or T cell
XX CC immune responses to protect the animal from disease. The proteins can
XX CC also be used to identify antimicrobial compounds which are capable of
XX CC inhibiting their bioactivity. In particular the proteins of the invention
XX CC can be used to prevent adhesion of bacteria to mammalian extracellular
XX CC matrix proteins on in-dwelling devices or in wounds, to block protein-
XX CC mediated mammalian cell invasion, and to block the normal progression of
XX CC pathogenesis in infections initiated other than by the implantation of in
XX CC -dwelling devices or other surgical techniques

PA (HUMA-) HUMAN GENOME SCI INC.
PI Rosen CA, Barash SC, Ruben SM;
XX WPI; 2001-457727/49.
XX
XX Isolated polypeptide for treating, preventing and/or prognosing
PT disorders related to the colon and rectum including colorectal cancers
PT and also for testing and detection e.g. diagnosis.
XX
XX Disclosure; SEQ ID NO 230; 522pp + Sequence Listing; English.
XX
XX The present invention provides the protein and coding sequences of a
CC number of colorectal cancer antigens. These are shown in A157547-
CC A157619 and AAM38569-AAM38641. These can be used in the diagnosis,
CC prevention and treatment of cancer of the colon and/or rectum. The
CC present sequence is a colorectal cancer antigen genomic sequence. Note:
CC The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

XX
XX New colorectal cancer polypeptide for diagnosing, prognosing, preventing,
PT and treating immune, hyperproliferative, liver, kidney, reproductive
PT disorders and for identifying modulators of therapeutic use.
XX
XX Disclosure; SEQ ID NO 230; 183pp; English.
XX
XX The present invention relates to the isolation of novel human colorectal
CC cancer related proteins, and polynucleotide sequences encoding them. The
CC sequences of the invention are useful in the diagnosis, treatment,
CC prevention and/or prognosis of the colon and/or rectum, including
CC colorectal cancer, colorectal cancer metastases, and gastrointestinal
CC disorders such as dysphagia, peptic oesophagitis, gastric reflux,
CC irritable bowel syndrome, and peritoneal diseases. The invention also
CC describes antibodies that bind colorectal cancer related proteins,
CC vectors, host cells, and recombinant and synthetic methods for producing
CC human colorectal cancer related polynucleotides, polypeptides, and/or
CC antibodies. ABS99797-ABS99974 represent genomic sequences encoding human
CC colorectal cancer related proteins. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from the USPTO web site at
CC seqdata.uspto.gov/psipdidentry.html

PS Claim 1; SEQ ID NO 698; 986bp; English.
XX
XX The present invention provides the protein and coding sequences of a
CC number of human digestive system antigens. These can be used in the
CC diagnosis, treatment and prevention of digestive system disorders,
CC including cancer, Meckel's diverticulum, bacterial or parasitic
CC infections, appendicitis, Hirschsprung's disease, chronic colitis or
CC ulcerative colitis. The present sequence is a cDNA encoding a digestive
CC system antigen of the invention

XX New colorectal cancer polypeptide for diagnosing, prognosing, preventing,
PT and treating immune, hyperproliferative, liver, kidney, reproductive
PT disorders and for identifying modulators of therapeutic use.
XX
XX Claim 4; SEQ ID NO 58; 183bp; English.
XX
XX The present invention relates to the isolation of novel human colorectal
XX cancer related proteins, and polynucleotide sequences encoding them. The
XX sequences of the invention are useful in the diagnosis, treatment,
XX prevention and/or prognosis of the colon and/or rectum, including
XX colorectal cancer. colorectal cancer metastases, and gastrointestinal
XX disorders such as dysphagia, peptic esophagitis, gastric reflux,
XX irritable bowel syndrome, and peritoneal diseases. The invention also
XX describes antibodies that bind colorectal cancer related proteins,
XX vectors, host cells, and recombinant and synthetic methods for producing
XX human colorectal cancer related polynucleotides, polypeptides, and/or
XX antibodies. AB899724-AB899796 represent cDNA sequences encoding human
XX colorectal cancer related proteins. Note: The sequence data for this
XX patent did not form part of the printed specification, but was obtained
XX in electronic format directly from the USPTO web site at
XX seqdata.uspto.gov/psipdsidentry.html

 PT cancers such as intestinal neoplasms, ulcers.
 XX
 PS Claim 3; SEQ ID NO 58; 179pp; English.
 XX
 CC The invention relates to a colorectal cancer antigen. The antigen is
 CC useful for chromosome identification, chromosome mapping, radiation
 CC hybrid mapping or gene therapy, or as hybridisation probes for
 CC differential identification of the tissues or cell types present in a
 CC biological sample. The antigen is useful for treating, preventing,
 CC diagnosing and/or prognosing gastrointestinal disorders, including
 CC inflammatory diseases and/or conditions, infections, cancers (e.g.
 CC intestinal neoplasms (carcinoid tumour of the small intestine, non-
 CC Hodgkin's lymphoma of the small intestine, small bowel lymphoma)) and
 CC ulcers (e.g. peptic ulcers). The antigen and its nucleic acid are useful
 CC to provide immunological probes for differential identification of the
 CC tissue. The antigen and its nucleic acid are useful for treating,
 CC preventing, diagnosing and/or prognosing diseases, disorders and/or
 CC conditions of the immune system e.g. Bruton's disease, X linked infantile
 CC agammaglobulinaemia, severe combined immunodeficiencies, DiGeorge
 CC anomaly, etc. The antigen and its nucleic acid is useful for treating,
 CC preventing and/or diagnosing hyperproliferative disorders (e.g. acute

XX
XX New isolated nucleic acid molecule that encodes a plant protein or its
XX fragment, useful for isolating a variety of agronomically significant
XX genes associated with plant growth, quality or yield, and as molecular
XX tags to map genes.
XX
XX Claim 1: SEQ ID NO 15954; 34pp; English.
XX
XX The invention relates to 17880 cotton expressed sequence tags (ESTs;
XX ACN45220-ACN63093). The ESTs were isolated from cDNA libraries generated
XX from primed or non-primed seeds from variety DP50B, mature seeds from
XX variety Coker 312, Boswell 96 Field, and androecium tissue, gynoecium
XX tissue, developing fibres, carpel walls and septa from variety
XX Nucleoton33B. The invention also relates to substantially purified
XX proteins or their fragments encoded by nucleic acid molecules of the
XX invention, and to transformed plants having a nucleic acid construct
XX comprising a nucleic acid of the invention. The cotton ESTs are useful as
XX molecular tags to isolate genetic regions, to isolate genes, to map
XX genes, to determine gene function and to determining whether genes are
XX members of a particular gene family. The nucleic acid molecules may be
XX used for isolating a variety of agronomically significant genes
XX associated with plant growth, quality, yield, and could also serve as
XX links in metabolic and catabolic pathways. The nucleic acid molecules are
XX also useful for identifying genes important in initiating and maintaining
XX seed germination or that may be used to mitigate stresses encountered
XX during seed germination. The ESTs additionally enable the acquisition of
XX promoters and cis-regulatory elements which will be useful to express
XX agronomically significant genes in these tissues and/or other tissues,
XX and also permits the acquisition of molecular markers useful in breeding
XX schemes, genetic and molecular mapping, and in cloning of agronomically
XX significant genes. The nucleic acid molecules are further useful for
XX detecting the expression level or pattern of a protein or mRNA and for
XX detecting the presence or quantity of a protein by tissue printing. The
XX present sequence represents a specifically claimed EST isolated from a
XX cotton variety Nucleoton33B gynoecium tissue cDNA library (L1B3829). The
XX sequence data for this patent did not form part of the printed
XX specification, but was obtained in electronic format directly from the US
XX patent office at seqdata.uspto.gov/sequence.html?docID=US20040123340

XX
XX Fragments of chemically modified genes associated with tumor suppressor
XX genes and oncogenes, useful in designing primers and probes for analyzing
XX diseases associated with cytosine methylation state e.g. cancer.
XX
XX Claim 1: SEQ ID NO 247; 27pp; English.
XX
XX The invention relates to a nucleic acid comprising a sequence of 18
XX bases, of a segment of chemically pretreated DNA (cp DNA) e.g. with
XX bisulphite, of genes associated with tumor suppression and oncogenes
XX having a sequence taken from 536 (actually 533 since numbers 408, 458 and
XX 500 are missing from the sequence listing) sequences (Ss) and sequences
XX complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
XX oligomer (PNA) of at least 9 nucleotides and may form part of a set of
XX probes for detecting the cytosine methylation state and/or single
XX nucleotide polymorphisms and also to be used in an array for analysing
XX diseases associated with CpG dinucleotides e.g. cancers and tumours. The
XX probes can also be used in a method for ascertaining genetic and/or
XX epigenetic parameters for the diagnosis and/or therapy of existing
XX diseases or the predisposition to specific diseases, by analysing
XX cytosine methylations. The parameters may be compared to another set of
XX genetic and/or epigenetic parameters, the differences serving as basis
XX for diagnosis and/or prognosis events which are disadvantageous to
XX patients. The present sequence is one of the 533 genomic sequences
XX derived from tumour suppressor genes and oncogenes. Note: The sequence
XX data for this patent did not form part of the printed specification, but
XX was obtained in electronic format directly from WIPO at
XX ftp.wipo.int/pub/published\_pct\_sequences

XX
PS Claim 1; SEQ ID NO 58; 27pp; English.
XX
SQ The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (58) and sequences
CC complementary to (58). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Sequences with even
CC numbered Seg ID numbers are the complementary sequence of the
CC corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
CC 535, except for those whose partner sequence is missing). Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO

XX
CC The invention relates to an isolated nucleic acid comprising at least 10
CC contiguous nucleotides of any of the 233 polynucleotide sequences given
CC in the specification, or its complement. The nucleic acids encode cancer-
CC associated proteins. Also included are an expression vector comprising
CC the isolated nucleic acid cited above, a host cell comprising the above
```

```
CC recombinant nucleic acid or expression vector, a microarray for detecting
CC a cancer-associated (CA) nucleic acid comprising at least one probe
CC comprising at least 10 contiguous nucleotides of any of the above-
CC mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC an open reading frame of a CA sequence selected from any of the 95
CC polynucleotide sequences as mentioned in the specification, or its
CC complement), an isolated antibody, (or its antigen binding fragment) that
CC binds to the above polypeptide, a hybridoma that produces the above
CC monoclonal antibody, a pharmaceutical composition comprising the above
CC antibody and a pharmaceutical excipient, a kit for detecting cancer
CC cells (comprising the antibody cited above, methods for diagnosing cancer
CC or for detecting the presence or absence of cancer cells in an
CC individual, a method for inhibiting growth of cancer cells in an
CC individual, a method for delivering a therapeutic agent to cancer cells
CC in an individual, an electronic library comprising the above
CC polynucleotide or polypeptide (or their fragments), methods of screening
CC for anticancer activity or for a bioactive agent capable of modulating
CC the activity of a CA protein (CAP), methods for detecting cancer
CC associated with expression of a polypeptide in a test cell sample, a
CC method for treating cancers and a method for inhibiting the expression of
CC CA gene in a cell. The composition and methods are useful for detecting,
CC diagnosing, preventing and treating cancers, especially lymphoma and
CC leukemia. These may also be used in screening for agents that modulate
CC cancer. The present sequence is a human CAP genomic sequence. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

 XX PT Novel human polypeptides and polynucleotides useful for diagnosing,
 XX PT preventing and treating cardiovascular disease, neurodegenerative,
 XX PT hyperproliferative disorders and autoimmune disorders.
 XX PS Disclosure; SEQ ID NO 12321; 1037pp; English.

The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see table 1 in the specification). ABRN15762 to ABRN2752 encode the human ORFX proteins given in ABR00010 to ABR1500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polynucleotide sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage, osteoarthritis, neurodegenerative disorders, disorders related to organ transplantation, cardiovascular diseases, diabetes mellitus, systemic lupus erythematosus, hypertension, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and disorders, infectious diseases, autoimmune disorders such as multiple sclerosis, rheumatoid arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis.

CC bone degenerative disorders, or periodontal disease, and for gut
 CC protection or regeneration and treatment of lung or liver fibrosis,
 CC reperfusion injury in various tissues and conditions resulting from
 CC systemic cytokine damage. N.B. The sequence data for this patent did not
 CC form part of the printed specification, but was obtained in electronic
 CC format directly from WFO at ftp.wfo.int/pub/published_pct_sequences

 XX

Claim 1; SEQ ID NO 28139; 15pp; English.
 XX

CC The invention describes a recombinant DNA construct comprising a
 CC polynucleotide consisting of a sequence encoding an amino acid sequence
 CC available in electronic form from the US patent office at
 CC ftp.segdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide
 CC of the invention are also useful in physical arrays of molecules and as
 CC plant breeding markers. The recombinant DNA construct is useful for
 CC improving plant tolerance to cold, heat, drought, herbicides, extreme
 CC osmotic conditions, pathogens or pests, for manipulating growth rate in
 CC plant cells by modification of the cell cycle pathway, for conferring
 CC increased resistance to plant disease, for producing galactomanan,
 CC lignin or plant growth regulators, for increasing the rate of homologous
 CC recombination in plants, for improving yield by modification of
 CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
 CC or by providing improved plant growth and development under at least one
 CC stress condition or for modifying seed oil or protein yield and/or
 CC content. This sequence represents a plant full length insert
 CC polynucleotide that can be used in the recombinant DNA construct of the
 CC invention.

PT Determining the degree of cytosine methylation in genomic DNA, useful for
 PT diagnosis and prognosis, comprises selective hybridization of amplicons
 PT from chemically treated DNA.
 XX

Claim 12; 56pp + Sequence Listing; 56pp; German.
 XX

CC This invention describes a novel method for determining the degree of
 CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a
 CC genomic sample of DNA. The sample is treated chemically to convert in a
 CC cytosine (C) but not methylated C, to uracil, then part of the genomic
 CC DNA that contains the target C is amplified to form a labeled amplicon.
 CC The amplicon is hybridized to two classes, each with at least one member,
 CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
 CC degree of hybridization to both classes is determined from the label on
 CC the amplicon. From the ratio of labels hybridized to the two classes of
 CC oligomers, the degree of methylation is calculated. The method is used:
 CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
 CC and of a wide range of diseases, e.g. cancer, disorders of the central
 CC nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
 CC particularly by detecting mutations or single nucleotide polymorphisms
 CC (SNPs); and (ii) for differentiation of cell or tissue types and for
 CC investigating cell differentiation. The method allows the methylation
 CC status of many C residues to be determined simultaneously. ABQ1410-
 CC ABQ34121 represent genomic DNA sequences used to illustrate the method
 CC for determining the degree of cytosine methylation described in the
 CC disclosure of the invention

 CC degree of hybridisation to both classes is determined from the label on
 CC the amplicon. From the ratio of labels hybridised to the two classes of
 CC oligomers, the degree of methylation is calculated. The method is used:
 CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
 CC and of a wide range of diseases, e.g. cancer, disorders of the central
 CC nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
 CC particularly by detecting mutations or single nucleotide polymorphisms
 CC (SNP's); and (ii) for differentiation of cell or tissue types and for
 CC investigating cell differentiation. The method allows the methylation
 CC status of many C residues to be determined simultaneously. ABQ13410-
 CC ABQ54121 represent genomic DNA sequences used to illustrate the method
 CC for determining the degree of cytosine methylation described in the
 CC disclosure of the invention

 XX
 PS Claim 1; SEQ ID NO 39611; 21pp + Sequence listing; English.
 XX
 CC The invention relates to an isolated nucleic acid detection reagent
 CC capable of detecting 1000 or more genes from Drosophila. The invention is
 CC useful in developmental biology and in elucidating cell signaling and
 CC cell-cell interactions in higher eukaryotes for the development of
 CC insecticides, therapeutics and pharmaceutical drugs. The invention
 CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
 CC sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
 CC ABB82072). The sequence data for this patent did not form part of the
 CC printed specification, but was obtained in electronic format directly
 CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

 XX
 PT New isolated breast specific nucleic acid molecules and polypeptides,
 PT useful for identifying, diagnosing, monitoring, staging, imaging and
 PT treating breast cancer and non-cancerous disease states in breast tissue.
 XX
 PS Claim 1, Page 161-162; 254pp; English.
 XX
 CC The invention relates to human breast specific nucleic acids (I)
 CC comprising: (a) a sequence encoding any one of 95 protein sequences
 CC (ABP6614-ABP66708); (b) any one of 115 polynucleotide sequences
 CC (ABV83558-ABV83672); (c) a molecule that selectively hybridizes to (a) or
 CC (b); (d) a molecule having at least 60% sequence identity to (a) or (b).
 CC The breast specific nucleic acid molecules, polypeptides and antibodies
 CC are useful for identifying, diagnosing, monitoring, staging, imaging and
 CC treating breast cancer and non-cancerous disease states in breast tissue.
 CC They are also useful for producing transgenic animals and cells and
 CC producing engineered breast tissue for treatment and research. The
 CC transgenic animals are useful as animal model systems used in elaborating
 CC the biological function of the polypeptides, studying conditions and/or
 CC disorders associated with aberrant expression and in screening for
 CC compounds effective in ameliorating the conditions. The polynucleotides
 CC are useful for gene therapy and in vaccines

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 RNA prepared and library constructed by W. Walter Lorenz (School of Forest Resources, University of Georgia); plant material prepared by Craig Zimmermann (School of Forest Resources, University of Georgia) using rooted cuttings provided by the Forest Biology Research Cooperative (FBRC) and the CCLONES project at the University of Florida; sequencing done in the Laboratory for Genomics and Bioinformatics, University of Georgia. Sequence ends have been trimmed to exclude vector and regions below phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA.
 Seq primer: M13-21 (GTGAACGACGCCAGT)

 /lab_host="DH10B-T1 phage-resistant E. coli"
 /note="Organ: Root; Vector: pSL180; Site_1: EcoRI; Site_2: XhoI; The library was prepared from polyA+ RNA from the roots of 1-year-old loblolly pine (Pinus taeda) cuttings that were rooted and then planted in washed sand. The rooted cuttings were maintained for 143 days (August 1 2003 harvest) under ambient conditions in a local greenhouse. They were kept on a weekly regimen of 0.5x nutrient-complete Hoagland's solution and supplemented with additional water sufficient to maintain a 15% soil moisture content. Twenty-four hours (24h) prior to harvesting roots for mRNA preparation, the potted trees were watered with 500 uM FeSO4 (aq) until the sand was saturated. Double-stranded cDNA was cloned unidirectionally into pSL180. Inserts can be excised with EcoRI (5' end) and XhoI (3' end)."

 Site_1: EcoRI; Site_2: ClaI; library enriched in
 transcripts present in suspension culture of loblolly pine
 (Pinus taeda L.), 7-56. Suspension culture was established
 from fertilized megagametophytes, according to method of
 Pullman et al 2003 (Pullman, G., S. Johnson, G. Peter, J.
 Cairney, and N. Xu. 2003. Improving loblolly pine somatic
 embryo maturation: Comparison of somatic and zygotic
 embryo morphology, germination, and gene expression. Plant
 Cell Reports 21:747-758.) This suspension cell culture,
 which contains early developing embryos and
 undifferentiated embryogenic tissue, was the source of
 the RNA used for the suspension culture library.
 Subtracted from this was cDNA made from a pool of RNA from
 zygotic embryos and female gametophytes from all stages of
 development plus somatic embryos from developmental stages
 beyond suspension culture (see Ciavatta VT, Morrillon R,
 Pullman GS, Christpeels M, Cairney J. 2001. An
 aquaglyceroporin is abundantly expressed early in the
 development of the suspensor and the embryo proper of
 loblolly pine (Pinus taeda L.). Plant Physiol. 127:

The library was characterised by oligonucleotide fingerprinting
(ONFP) to reduce sequencing redundancy. According to the ONFP
procedure, clones that display the same hybridisation matrix with a
battery of 200 short oligonucleotides are grouped into clusters. One
clone per ONFP cluster was selected for sequencing. cDNA clones and
filters are distributed via Deutsches Ressourcenzentrum fuer
Genomforschung GmbH (<http://www.rzpd.de>).

 Naming Conventions: EST name is generated by the concatenation of the JGI Clone Id and the direction of sequencing. The suffix '.rev' indicates a reverse sequencing read of the insert. It does not necessarily reflect the orientation of the insert.
 Poly-A: Based upon the presence of a run of 14 or more T residues at the beginning of the sequence, this clone was polyadenylated.
 The resulting Poly-T sequence has been removed.
 Small insert: Based upon one or more sequencing reads of this clone where vector sequence was present at both ends, this clone has been determined to contain a cDNA insert on the order of 600-1000 bases.

the JGI clone id and the direction of sequencing. The suffix '.rev'
indicates a reverse sequencing read of the insert. It does not
necessarily reflect the orientation of the insert.

Poly-A: Based upon the presence of a run of 14 or more T residues
at the beginning of the sequence, this clone was polyadenylated.
The resulting Poly-T sequence has been removed.

Naming Conventions: EST name is generated by the concatenation of
the UGI Clone ID and the direction of sequencing. The suffix '.fwd'
indicates a forward sequencing read of the insert. It does not
necessarily reflect the orientation of the insert.
Small Insert: Based upon one or more sequencing reads of this clone
where vector sequence was present at both ends, this clone has been
determined to contain a cDNA insert on the order of 600-1000 bases.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT
All repeats were identified using RepeatMasker:
Smit, A.F.A. & Green, P. (1996-1997)
http://ftp.genome.washington.edu/RM/RepeatMasker.html

Center: Whitehead Institute/ MIT Center for Genome Research
Web site: http://www-seq.wi.mit.edu
Contact: sequence.submissions@genome.wi.mit.edu

Center project name: L7012
Center clone name: 252_G_6
NOTE: This record contains 51 individual
contigs. Reads of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
However, it should not be assumed that this clone
will be sequenced to completion. In the event that
the record is updated, the accession number will
be preserved.

Project Information
Center project name: L8832
Center clone name: 601_G_24

* NOTE: This record contains 69 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will

* be preserved.

 Center clone name: 3 N 16
 ----- Summary Statistics
 Sequencing vector: M13; M77815; 100% of reads
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.960731
 Consensus quality: 111839 bases at least Q40
 Consensus quality: 133540 bases at least Q30
 Consensus quality: 144810 bases at least Q20
 Insert size: 163000; agarose-fp
 Insert size: 151167; sum-of-contigs
 Quality coverage: 3.7 in Q20 bases; agarose-fp
 Quality coverage: 4.0 in Q20 bases; sum-of-contigs

----- NOTE: This is a 'working draft' sequence. It currently
 consists of 22 contigs. The true order of the pieces
 is not known and their order in this sequence record is
 arbitrary. Gaps between the contigs are represented as
 runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.

 LOCUS
 DEFINITION
 Human DNA sequence from clone RP11-503C24 on chromosome 6 Contains
 the 3' end of a novel gene, up to five novel genes, (including
 FLJ31232 and p13671), a meningioma expressed antigen 6
 (coiled-coil proline-rich) (MGEA6) pseudogene and three Cpg
 islands, complete sequence.

Cambridgehire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
Clone requests: clonerequest@sanger.ac.uk
On Nov 25, 2001 this sequence version replaced gi:17017816.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Emi, EMBL; Sw, SWISSPROT; Tr, TREMBL; Mp, MORMEP; Information on the MORMEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human Chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at
<http://www.sanger.ac.uk/HGP/Chr6>
Rp11-503C24 is from the library RPICT-11.2 constructed by the group of Pieter de Jong. For further details see
<http://www.chori.org/bacpac/home.htm>
VECTOR: pBACe3.6

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

Direct Submission
Submitted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Jun 29, 2005 this sequence version replaced gi:67514866.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Emi, EMBL, Swi, SWISSPROT, Tr, TREMBL, Wp, WORMPEP, Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted. Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhifeng Bao and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see http://www.sanger.ac.uk/Projects/D_rerio/fishmark.shtml RP71-47G15 is from a Zebrafish mixed sex BAC library VECTOR: pTARBAC2.

 ----- Project Information
 Center project name: Kai
 Center clone name: 021118

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is generally based on at least 8x average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics

Sequencing vector: plasmid; n/a; 100% of reads
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.990319
 Consensus quality: 149393 bases at least Q40
 Consensus quality: 149999 bases at least Q30
 Consensus quality: 150398 bases at least Q20
 Insert size: 136000; agarose-fp
 Insert size: 150534; sum-of-contigs
 Quality coverage: 11.25x in Q20 bases; agarose-fp
 Quality coverage: 10.16x in Q20 bases; sum-of-contigs

 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 6 contigs. Gaps between the contigs
 * are represented as runs of N. The order of the pieces
 * is believed to be correct as given, however the sizes
 * of the gaps between them are based on estimates that have
 * provided by the submitter.
 * This sequence will be replaced
 * by the finished sequence as soon as it is available and
 * the accession number will be preserved.

 Rat Genome Sequencing Consortium.
 Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
 On Nov 15, 2002 this sequence version replaced gi:2366327.
 The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

  Direct Submission
  Submitted (13-NOV-2002) Human Genome Sequencing Center, Department
  of Molecular and Human Genetics, Baylor College of Medicine, One
  Baylor Plaza, Houston, TX 77030, USA
  On Nov 13, 2002 this sequence version replaced gi:23194988.
  The sequence in this assembly is a combination of BAC based reads
  and whole genome shotgun sequencing reads assembled using Atlas
  (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
  in the feature table below represents a scaffold in the Atlas
  assembly (a 'contig-scaffold'). Within each contig-scaffold,
  individual sequence contigs are ordered and oriented, and separated
  by sized gaps filled with Ns to the estimated size. The sequence
  may extend beyond the ends of the clone and there may be sequence
  contigs within a contig-scaffold that consist entirely of whole
  genome shotgun sequence reads. Both end sequences and whole genome
  shotgun sequence only contigs will be indicated in the feature
  table.

  Center clone name: CH230-130U10
  ----- Summary Statistics
  Assembly program: Phrap; version 0.990329
  Consensus quality: 222023 bases at least Q40
  Consensus quality: 225500 bases at least Q30
  Consensus quality: 227619 bases at least Q20
  Estimated insert size: 230972; sum-of-contigs estimation
  Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
  -----
  * NOTE: Estimated insert size may differ from sequence length
  * (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
  * NOTE: This is a 'working draft' sequence. It currently
  * consists of 5 contigs. The true order of the pieces
  * is not known and their order in this sequence record is
  * arbitrary. Gaps between the contigs are represented as
  * runs of N, but the exact sizes of the gaps are unknown.
  * This record will be updated with the finished sequence
  * as soon as it is available and the accession number will
  * be preserved.
  * 1 72582: contig of 72582 bp in length
  * 72583 72582: gap of unknown length

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:

Center project name: H_RG305H12

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see <http://www.nhgri.nih.gov/DIR/CTB/CHK7> or <mailto:egreen@nhgri.nih.gov>

SOURCE INFORMATION:

Clone CTA-305H12 is from a release of the human BAC library CTB-HS-A. The library contains cloned DNA from human sperm. See: Shizuya et al., Proc. Natl. Acad. Sci. USA 89:8794-7 (1992); U-J. Kim et al., Genomics 34:213-8 (1996). The clone is available from Research Genetics, Inc. (<http://www.resgen.com>).
VECTOR: pBelBAC11
Selection: chloramphenicol

NEIGHBORING SEQUENCE INFORMATION:

The actual start of this clone is at base position 1 of CTA-305H12
actual end is at 144165 of CTA-305H12.

 COMMENT ----- Genome Center
 Center: Wellcome Trust Sanger Institute
 Center code: SC
 Web site: http://www.sanger.ac.uk
 Contact: zfish-help@sanger.ac.uk

 During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
 This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.
 The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormep Repeat names beginning 'dr' were identified by the Recon repeat discovery system (Zhong Bao and Sean Eddy, submitted), and those beginning 'dr' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see http://www/Projects/D_rerio/fishmask.shtml

 NOTICE:
 This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
 MAPPING INFORMATION:
 Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu
 SOURCE INFORMATION:
 The CHORI-251 Chimpanzee BAC library has been constructed at the Children's Hospital Oakland Research Institute, BACPAC Resources, by Dr. Baoji Zhu. DNA was isolated from white blood cells obtained from a male chimpanzee (Pan troglodytes, 'Cint', Yerkes #C0471; birthdate:6-6-80). The clone and detailed information can be obtained from Pieter de Jong and co-workers at http://www.bacpac.chori.org.

Primer A: None
Primer B: None
STS Size: 819
Protocol:
WGS-discovery: Paired-end low-coverage whole genome shotgun reads
were generated from 129S1/SVIMJ, C3H/HeJ, and BALB/cByJ. The WGS
reads were placed uniquely on the MGSCV3 C57BL/6J assembly and SNP
detection was carried out by SSNA-SNP. 225,000 reads were
annotated
as STSs and 81,000 SNPs were annotated with alleles from C57BL/6J
and the strain from which the particular read came. The validation
rate for these SNPs was estimated at approximately 98%.

Contact: zfsh-help@sanger.ac.uk

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep
Zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted.
Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhifeng Bao and Sean Eddy, submitted), and those beginning 'dir' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml
CH211-276C20 is from a CHORI-211 BAC library
VECTOR: pTRABAC2.1.

Oryza sativa japonica (nipponbare) genomic DNA, chromosome 4, BAC
clone: OSJNBa0008M17.
On Jul 12, 2002 this sequence version replaced gi:17998462.
Web site: http://www.ncgr.ac.cn

----- Summary Statistics -----
Assembly program: phrap

This is a complete sequence.
Genes were identified by a combination of several methods: Gene
prediction programs including Fgenesh (<http://www.softberry.com/>),
genSCAN (<http://CCR-081.mit.edu/GENSCAN.html>), GenemarkHMM
(<http://genemark.biology.gatech.edu/Genemark/>), tRNAscan-SE (Sean
Bddy' <http://genome.wustl.edu/eddy/tRNAscan-SE/>), searches of the
complete sequence against NCBI none redundant protein database (nr)
(<ftp://nbi.nlm.nih.gov/biase/db>) and the EST database at NCGR.

```

* NOTE: This is a 'working draft' sequence. It currently

* consists of 10 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

*	1	31090: contig of 31090 bp in length
*	31091	gap of 100 bp
*	31191	contig of 2954 bp in length
*	31145	gap of 100 bp
*	34245	contig of 29854 bp in length
*	64099	gap of 100 bp

Center project name: H_NH0055C06
Drafting Center: WIRB

 DATED: 11/11/2011
 BY: [REDACTED]
 NOTICE:

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate

chemistry, or covered by high quality data (i.e., phred quality > 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence

from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For

additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:
The RPCT-11 human BAC library was made from the blood of one male donor, as described by Osogawa, K., Woon, P. Y., Zhao, B., Frenken, E.,

Tateno, M., Caranese, J. J. and de Jong, P. J. (1998) An improved

Approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>

VECTOR: pBACE3.6

NEIGHBORING SEQUENCE INFORMATION:

Actual start of this clone is at base position 1 of RP11-55C6; actual end is at base position 146673 of RP11-55C6.

The sequence of AC025849 has been incorporated into AC093755.

The repeat regions shown were identified using RepeatMasker by Adrian Smit.

Sequence similarities were identified using Powerblast by Jinghui Zhang.

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

-----
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest, except on the rare
occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPP; Information
on the WORMPP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpp/Clone-derived

```

zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted.

Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhirony Bao and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see http://www.sanger.ac.uk/Projects/D_zebrafish/fishmask.shtml CH211-11A11 is from a CHORI-211 BAC library

Rat Genome Sequencing Consortium.
Submitted (19-NOV-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Direct Submission
Submitted (15-JAN-2004) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
zfsh-help@sanger.ac.uk
On Jan 17, 2004 this sequence version replaced gi:36304125.
----- Genome Center
Center: Wellcome Trust Sanger Institute
Center code: SC
Web site: <http://www.sanger.ac.uk>
Contact: zfsh-help@sanger.ac.uk

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest, except on the rare
occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
EM: EMBL; SW: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep
Zebrafish pUC subclones occasionally display inconsistency over the
length of mononucleotide A/T runs and conserved TA repeats. Where
this is found the longest good quality representation will be
submitted.

Repeat names beginning 'Dr' were identified by the Recon repeat
discovery system (Zhifeng Bao and Sean Eddy, submitted), and those
beginning 'dir' were identified by Rick Waterman (Stephen Johnson
lab, WashU). For further information see
http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml DKEY-245C12
is from a Zebrafish BAC library

----- Project Information

Center project name: L32528
Center clone name: 121_G22

NOTE: This is a 'working draft' sequence. It currently
consists of 7 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

1 24346: contig of 24346 bp in length

Quality coverage: 7x in Q20 bases, sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length.
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html) )
* NOTE: This is a 'working draft' sequence. It currently
* consists of 1 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
*   1  223824: contig of 223824 bp in length.

COMMENT
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rac/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated

```

by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

COMMENT
On Sep 19, 2002 this sequence version replaced gi:21908529.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

On May 9, 2003 this sequence version replaced g1:24818187.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rac/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Project Information

Center project name: FGXP

Center clone name: CH240-11C13

Summary Statistics

Assembly program: Atlas 3.0:

Consensus quality: 240429 bases at least Q40

Consensus quality: 244119 bases at least Q30

Consensus quality: 246537 bases at least Q20

Estimated insert size: 251354; sum-of-contigs estimation

Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbankdraft_data.html)

NOTE: This sequence may represent more than one clone.

NOTE: This is a 'working draft' sequence. It currently

consists of 25 contigs. The true order of the pieces

is not known and their order in this sequence record is

arbitrary. Gaps between the contigs are represented as

runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence

as soon as it is available and the accession number will

be preserved.

Rat Genome Sequencing Consortium.

Direct Submission
Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Nov 19, 2002 this sequence version replaced gi:23097381.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

COMMENT

On Nov 13, 2002 this sequence version replaced gi:23096222. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold,

individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Genome Center

Center: Baylor College of Medicine

Center code: BCM

Web site: <http://www.hgsc.bcm.tmc.edu/>

Contact: hgsc-help@bcm.tmc.edu

----- Project Information

Center project name: GDNWJ

Center clone name: CH230-8H18

----- Summary Statistics

Assembly program: Phrap; version 0.990329

Consensus quality: 237591 bases at least Q40

Consensus quality: 239484 bases at least Q30

Consensus quality: 240656 bases at least Q20

Estimated insert size: 24055; sum-of-contigs estimation

Quality coverage: 7x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 3 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

* 1 255140: contig of 255140 bp in length
* 255141 255240: gap of unknown length
* 255241 274427: contig of 19187 bp in length
* 274428 274527: gap of unknown length
* 274528 280215: contig of 5688 bp in length.

XX Identifying a stress condition to which a plant cell has been exposed and
PT producing plants with increased tolerance to these abiotic stresses.
PS Claim 144; SEQ ID NO 1519; 577pp + Sequence Listing; English.
XX The invention relates to identifying a stress condition to which a plant
CC cell has been exposed, comprising: (a) contacting nucleic acid
CC representative of expressed polynucleotides in the plant cell with an
CC array or probes representative of the plant cell genome; and (b)
CC detecting a profile of expressed polynucleotides in the plant cell
CC characteristic of a stress response; The method is useful in the
CC production of transgenic plants, cells and seeds and in producing plants
CC with increased tolerance to abiotic stress. The present sequence is that
CC of an Arabidopsis thaliana stress regulated gene (AB212196-AB217574) used
CC in methods of the invention. Note: The sequence data for this patent is
CC not represented in the printed specification but is based on sequence
CC information supplied to Derwent by the European Patent Office

PT New composition comprising two or more isolated polypeptides, useful for
PT preparing a medicament for treating pain in an animal.
PS Claim 1; Page; 1017pp; English.

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a

CC compound that regulates the activity of one or more of the
CC polynucleotides, a method for producing a pharmaceutical composition, a
CC method for identifying a compound or small molecule that regulates the
CC activity in an animal of one or more of the polypeptides given in the
CC specification, a method for identifying a compound useful in treating
CC pain and a pharmaceutical composition comprising the one or more
CC polypeptides or their antibodies. The polynucleotide or the compound that
CC modulates its activity is useful for preparing a medicament for treating
CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
CC therapy). The sequence presented is a rat DNA (shown in Table 2 of the
CC specification) which is differentially expressed during pain. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic form directly from WIPRO at
CC ftp.wipro.int/pub/published_pct_sequences.

XX immunocjugates for treating e.g. multiple myeloma cell or chronic
XX lymphocytic leukemia.
XX
XX Claim 1; SEQ ID NO 94; 307bp; English.
XX
XX The present invention describes an isolated polynucleotide (1), which is
XX overexpressed in hematological malignancies, and which encodes a
XX polypeptide or an immunogenic fragment of the polypeptide. Also
XX described: (1) an isolated polypeptide; (2) an expression vector
XX comprising (1) operably linked to an expression control sequence; (3) a
XX host cell comprising an expression vector; (4) an isolated antibody that
XX specifically binds to the polypeptide or its immunogenic fragment; and

CC (5) immunocjugates comprising the antibody above, or an antibody that
CC specifically binds to a polypeptide, or its immunogenic fragment, encoded
CC by (1). (1) has cytostatic and immunostimulant activities, and can be
CC used in vaccines and immunotherapy. The immunocjugates are useful in
CC the manufacture of a medicament, particularly as active ingredients in a
CC composition for treating cancer, e.g. multiple myeloma cell, chronic
CC lymphocytic leukaemia, B cell leukaemia, or lymphomas in humans, sheep,
CC primates, goats, bovines, equines, porcines, lupines, canines or felines.
CC The polynucleotide (1) or polypeptide can be used for screening anti-
CC cancer agents, and generating antibodies or immunocjugates for treating
CC or preventing the above-mentioned diseases. The polynucleotide,
CC polypeptide or antibody can be used for detecting, diagnosing or
CC prognosticating the haematological malignancies described above. The
CC present sequence is used in the exemplification of the present invention.

XX
XX Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
XX comprises a nucleotide sequence.
XX
XX Claim 1; SEQ ID NO 1954; 0bp; English.
XX
XX The present invention relates to novel DNA and protein sequences which
XX are associated with carcinomas. The sequences are useful for: (i) for
XX screening drug candidates; (ii) for screening of bioactive agent capable
XX of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
XX a bioactive agent capable of modulating the activity of CAP; (iv) for
XX evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
XX carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
XX carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
XX (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
XX determining Carcinoma Associated (CA) gene copy number. In addition, the
XX CA genes are useful as DNA vaccines and the CAP are useful as markers of
XX carcinoma including lymphoma. The present sequence is one such CA coding
XX sequence. Note: This patent is an equivalent to basic patent
XX US2002182566A1, for which no sequence data was published

PT New recombinant nucleic acid encoding carcinoma associated protein,
useful for preparing compositions for treating carcinomas.

PS Claim 1; SEQ ID NO 1412; 245pp; English.

XX The invention relates to recombinant carcinoma associated (CA) nucleic
CC acid sequences from mouse and human (ADA01482-ADA03094), and to
CC recombinant carcinoma associated proteins (CAP) encoded by them. The
CC invention also encompasses expression vectors and host cells comprising a
CC CA nucleic acid, a polypeptide (especially an antibody) that specifically
CC binds to the protein, and a biochip comprising CA nucleic acid or
CC fragments thereof. The sequences of the invention were identified using
CC oncogenic retroviruses, which insert into the genome of the host organism
CC at random. Many of these do not carry transduced host oncogenes or
CC pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC direct consequence of the effects of proviral integration into host
CC protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC carcinoma (especially breast cancer, prostate cancer, lymphoma or
CC leukemia) or a propensity to carcinoma by determination of the sequence
CC of a CA gene, or by determination of CA gene expression in particular
CC tissues. CA nucleic acids, proteins and antibodies are also useful as
CC therapeutic agents and in screening and evaluating drug candidates. The
CC present sequence represents a specifically claimed human CA nucleic acid
CC sequence of the invention. Note: The complete sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PT New recombinant nucleic acid, useful for treating carcinomas, lymphomas,
cancers, neoplasm, adenocarcinoma, or sarcomas.

PS Claim 1; SEQ ID NO 460; 2304pp; English.

XX The invention relates to a novel recombinant nucleic acid comprising a
CC nucleotide sequence selected from any of the 660 sequences fully defined
CC in the specification. A polynucleotide of the invention has cytosstatic
CC activity, and may have a use in gene therapy, or in a vaccine. The
CC recombinant nucleic acids and polypeptides are useful for treating
CC carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and
CC sarcomas. The present sequence represents a human gene of the invention.

 XX
 CC The invention relates to new recombinant nucleic acids. The invention
 CC also relates to a host cell comprising a recombinant nucleic acid or
 CC expression vector, an expression vector comprising a recombinant nucleic
 CC acid, a recombinant protein, a method of screening for drug candidates, a
 CC method of screening for a bioactive agent capable of binding to a
 CC carcinoma associated protein (CAP) encoded by a nucleotide sequence, a
 CC method of screening for a bioactive agent capable of modulating the
 CC activity of a CAP, a method of evaluating the effect of a candidate
 CC carcinoma drug, a method of diagnosing carcinoma, a method for inhibiting
 CC the activity of a CAP, a method of treating carcinomas, a method of
 CC neutralising the effect of a CAP and a method of diagnosing carcinoma or
 CC propensity to carcinoma. A method of evaluating the effect of a candidate
 CC carcinoma drug comprises administering the drug to a patient, removing a
 CC cell sample from the patient and determining alterations in the
 CC expression or activation of a gene comprising the nucleotide sequence. A
 CC method of diagnosing carcinoma comprises determining the expression of
 CC one or more genes comprising the nucleic acid sequence in a first tissue
 CC type of a first individual and comparing the expression of the gene from
 CC a second normal tissue type from the first individual or a second
 CC unaffected individual, where a difference in the expression indicates
 CC that the first individual has carcinoma. A method of inhibiting the
 CC activity of a CAP comprises binding an inhibitor to the CAP. Treating
 CC carcinomas comprises administering to a patient an inhibitor of CAP.
 CC Neutralising the effect of a CAP comprises contacting an agent specific
 CC for the CAP. The polypeptide specifically binds to the protein encoded by
 CC the nucleic acid. It comprises an antibody that specifically binds to the
 CC protein encoded by the nucleic acid. The nucleic acids are useful for
 CC preparing a composition for diagnosing or treating carcinoma e.g.,
 CC leukaemia or lymphoma. This sequence represents a human carcinoma
 CC associated (CA) nucleic acid of the invention. Note: The sequence data
 CC for this patent did not form part of the printed specification but was
 CC obtained in electronic format directly from USPTO at
 CC seqdata.uspto.gov/sequence.html.

PS
XX
CC The present invention describes an isolated cancer associated (CA)
CC nucleic acid (1). Also described: (1) an expression vector comprising (1)
CC ; (2) a host cell comprising (1) or the expression vector; (3) a
CC microarray for detecting a CA nucleic acid; (4) an isolated cancer
CC associated protein (CAP) polypeptide, encoded within an open reading
CC frame of a CA sequence; (5) an isolated antibody, or its antigen binding
CC fragment, that binds to the above polypeptide; (6) a hybridoma that
CC produces the above monoclonal antibody; (7) a pharmaceutical composition
CC comprising the above antibody and a pharmaceutical excipient; (8) a kit
CC for detecting cancer cells, comprising the (monoclonal) antibody
CC described above; (9) methods for diagnosing cancer or for detecting the
CC presence or absence of cancer cells in an individual; (10) a method for
CC inhibiting growth of cancer cells in an individual; (11) a method for
CC delivering a therapeutic agent to cancer cells in an individual; (12) an
CC electronic library comprising the above polynucleotide or polypeptide, or
CC their fragments; (13) methods of screening for anticancer activity or for
CC a bioactive agent capable of modulating the activity of a CAP; (14)
CC methods for detecting cancer associated with expression of a polypeptide
CC in a test cell sample, or with the presence of an antibody in a test
CC serum sample; (15) a method for treating cancers; and (16) a method for
CC inhibiting the expression of CA gene in a cell. The CA sequences have
CC cytostatic activity, and can be used in vaccines, and in gene therapy.
CC The composition and methods are useful for detecting, diagnosing,
CC preventing and treating cancers, especially lymphoma and leukemia. They
CC may also be used in screening for agents that modulate cancer. The
CC present sequence represents a cancer associated gene genomic DNA
CC sequence, which is used in the exemplification of the present invention.

PS
XX
CC The invention relates to a nucleic acid array for detecting a cancer
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC The invention also relates to a peptide array comprising two or more
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC that binds to a polypeptide, an isolated antibody or its fragment which
CC binds to a polypeptide, which is prepared by immunizing a host animal
CC with a composition comprising the polypeptide or its antigen binding
CC fragment and collecting cells from the host expressing antibodies against
CC the antigen or its antigen binding fragment, a composition comprising the
CC antibody and a carrier, a method of screening for anticancer activity, a
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC method of treating cancer and a method of inhibiting expression of a CA
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC nucleic acids. The antibody is useful for detecting the presence or
CC absence of cancer cells in an individual which involves contacting cells
CC from the individual with the antibody and detecting a complex of a CA
CC protein from the cancer cells and the antibody, where the detection of
CC the complex correlates with the presence of cancer cells in the
CC individual. The composition is useful for inhibiting growth of cancer
CC cells in an individual or for delivering a therapeutic agent to cancer
CC cells in an individual. The invention is also useful for diagnosing
CC cancer, for treating cancer and for inhibiting expression of a CA gene in
CC a cell. This sequence represents human cancer-associated genomic DNA of
CC the invention.

PT	Modifying activation characteristics of plant resistance proteins to produce autoactivator polypeptide capable of activation in absence of elicitor, by introducing modifications in amino acid sequence of protein.	
PS	Disclosure; Page 45-55; 77pp; English.	
CC	The sequence represents the coding sequence of Rx clone 7, a modified resistance autoactivator. Rx encodes an NBS-LRR polypeptide having a nucleotide binding site (NBS), leucine rich repeat (LRR), and which mediates cellular response leading to pathogen resistance and/or cell death or dysfunction in response to an elicitor. The Rx was modified by introducing modification to the amino acid sequence to produce an autoactivator polypeptide, capable of activation in absence of an elicitor. Decoupling of resistance response from its natural elicitor is useful for developing novel pathogen resistant plants. The modified CC resistance proteins are useful for conferring resistance to non-natural agents or stimuli and also for investigating resistance response pathways and protein interactions e.g. with activators and repressors

XX
XX PS Disclosure; Page 47-51; 278pp; English.
XX
XX The present invention relates to a method for identifying candidate p53
XX pathway modulating agents. The method involves contacting an assay system
XX comprising purified chromatin organisation modifier (chromo) domain
XX helicase DNA binding proteins (CHD), nucleic acids, their functionally
XX active fragments or derivatives, with a test agent under conditions
XX where, but for the presence of the test agent, the system provides a
XX reference activity. The methods are useful for identifying modulators of
XX the p53 pathway as therapeutic targets for disorders associated with
XX defective p53 function, such as angiogenic disorders, apoptotic disorders
XX or cell proliferative disorders, e.g. cancer. The modulators are useful
XX as research reagents, diagnostics and therapeutics. The invention is also
XX useful in gene therapy. The present sequence is human CHD DNA

XX The invention relates to a novel pharmaceutical composition active on
XX angiogenesis comprising an endothelial cell nucleic acid whose expression
XX is induced by an angiogenic factor and inhibited by an angiostatic agent
XX or its complement or fragment, a polypeptide sequence encoded by the
XX nucleic acid or its fragment, a molecule capable of inhibiting expression
XX of the nucleic acid or a molecule which binds to the polypeptide
XX sequence. The invention is used to diagnose, prognose or treat an
XX angiogenic disorder in a mammal, particularly a human. The disorder is
XX particularly tumor vascularization, a retinopathy, rheumatoid arthritis,
XX Crohn's disease, atherosclerosis, ovary hyperstimulation, psoriasis,
XX endometriosis associated with neovascularization, restenosis due to
XX angioplasty, overproduction of tissue due to cicatrization, a peripheral
XX vascular disease, hypertension, vascular inflammation, Raynaud disease,
XX aneurism, arterial restenosis, thrombophlebitis, ischemia, angina,
XX myocardial infarction, chronic heart disease, cardiac congestion or
XX macular degeneration due to age or osteoporosis. This sequence
XX corresponds to a differentially expressed DNA used in the composition of
XX the invention.

 PT Antisense nucleic molecule useful as inhibitor of angiogenesis in the
 PT treatment of angiogenic disorders, e.g., rheumatoid arthritis,
 PT atherosclerosis and endometriosis.
 XX
 PS Claim 1; SEQ ID NO 33; 404bp; French.
 CC The invention relates to a novel inhibitor of angiogenesis comprising an
 CC active substance chosen from at least one of a nucleic acid molecule, an
 CC antisense nucleic acid molecule, a polypeptide or an antibody. The
 CC invention further comprises: an antisense nucleic acid sequence chosen
 CC from any of the sequences provided in the specification; preparation of
 CC the antibody comprising in vivo or in vitro immunisation of an
 CC immunocompetent animal cell, preferably of a vertebrate and most
 CC preferably of a mammal, with at least one of the polypeptide sequences
 CC chosen from a sequence provided in the specification; a mammalian
 CC expression vector comprising at least one antisense sequence chosen from
 CC an antisense nucleic acid provided in the specification; preparation of a
 CC genetically modified cell, that over- or under-expresses a gene
 CC implicated in an angiogenic disorder, comprising inserting the vector
 CC from above into a mammalian cell; a genetically modified cell that over-
 CC expresses or under-expresses at least one gene involved in angiogenesis
 CC by a nucleic acid sequence chosen from any of ADP73049 to ADP73338, as in
 CC the antisense nucleic acid selection of above, or a fragment of any of
 CC these; preparation of a cell line that stably expresses an expression
 CC vector. The angiogenesis inhibitor has the following activities:
 CC antiangiogenic; angiogenesis stimulator; angiogenesis inhibitor,
 CC cycostatic, dermatological, antiarthritic, antirheumatic,
 CC antiinflammatory, vasotropic, hypotensive, ophthalmological,
 CC antipsoriatic, and cardiac. The novel nucleic acid molecules of the
 CC invention may be used to treat disorders in gene therapy and antisense
 CC gene therapy. The nucleic acid sequences, proteins and antibodies as part
 CC of the therapeutic compositions are useful in treating a disorder of
 CC angiogenesis chosen from: tumor vascularization, retinopathies,

CC rheumatoid arthritis, Crohn's disease, atherosclerosis, ovarian
CC hyperstimulation, psoriasis, endometriosis associated with
CC neovascularization, restenosis due to balloon angioplasty, tissue
CC granulation due to scarification, peripheral vascular disorders,
CC hypertension, vascular inflammation, Raynaud's disease, aneurism,
CC arterial restenosis, thrombophlebitis, lymphadenopathy, lymphedema,
CC ischaemia, angina, myocardial infarction, chronic heart disease,
CC congestive heart disease, macular degeneration linked to age and
CC osteoporosis. This polynucleotide represents a human DNA sequence for the
CC creation of an angiogenesis inhibitor of the invention.

PT Assessing colorectal cancer status comprises identifying differential
PT modulation in a combination of genes or analyzing the gene expression
PT profiles of biological samples.
XX
PS Claim 7; SEQ ID NO 27; 114pp; English.
XX
XX The invention relates to a novel method for assessing colorectal cancer
CC status comprising identifying differential modulation in a combination of
CC genes selected from any of the 7 nucleotide sequences having 1221-1974 bp
CC fully defined in the specification (ADX44387-ADX44393). The method of the
CC invention has cytostatic activity, and may have a use in gene therapy.
CC The methods and kit of the invention are useful for assessing, diagnosing
CC or treating colorectal cancer. The present sequence represents a gene
CC used in the invention.

XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
XX Disclosure; SEQ ID NO 35765; 3071bp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/hematopoietic antigen (I)
CC amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patient's own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/hematopoietic-related diseases, especially
CC cancers and cancer metastases of hematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/hematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
CC represent sequences used in the exemplification of the present invention

PT New composition comprising two or more isolated polypeptides, useful for
PT preparing a medicament for treating pain in an animal.
```

```
XX Example 1; Page; 1017pp; English.
XX
CC The invention discloses a composition comprising two or more isolated rat
CC or human polynucleotides or a polynucleotide which represents a fragment,
CC derivative or allelic variation of the nucleic acid sequence. Also
CC claimed are a vector comprising the novel polynucleotide, a host cell
CC comprising the vector, a method for identifying a nucleotide sequence
CC which is differentially regulated in an animal subjected to pain and a
CC kit to perform the method, an array, a method for identifying an agent
CC that increases or decreases the expression of the polynucleotide sequence
CC that is differentially expressed in neuronal tissue of a first animal
CC subjected to pain, a method for identifying a compound which regulates
CC the expression of a polynucleotide sequence which is differentially
CC expressed in an animal subjected to pain, a method for identifying a
CC compound that regulates the activity of one or more of the
CC polynucleotides, a method for producing a pharmaceutical composition, a
CC method for identifying a compound or small molecule that regulates the
CC activity in an animal of one or more of the polypeptides given in the
CC specification, a method for identifying a compound useful in treating
CC pain and a pharmaceutical composition comprising the one or more
CC polypeptides or their antibodies. The polynucleotide or the compound that
CC modulates its activity is useful for preparing a medicament for treating
CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
CC therapy). The sequence presented is a human DNA (described in Table 3 of
CC the specification) which encodes one of the polypeptides of the invention
CC which is differentially expressed during pain. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic form directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

DR New recombinant DNA construct, useful for improving plant tolerance to
XX cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or
PT pests, for conferring increased resistance to plant disease, or for
PT improving yield.
XX
XX Claim 1; SEQ ID NO 29204; 15pp; English.

XX The invention describes a recombinant DNA construct comprising a
CC polynucleotide consisting of a sequence encoding an amino acid sequence
CC available in electronic form from the US patent office at
CC ftp.segdata.uspto.gov/sequence.html?docid:2004034888. The polynucleotide
CC of the invention are also useful in physical arrays of molecules and as
CC plant breeding markers. The recombinant DNA construct is useful for
CC improving plant tolerance to cold, heat, drought, herbicides, extreme
CC osmotic conditions, pathogens or pests, for manipulating growth rate in
CC plant cells by modification of the cell cycle pathway, for conferring
CC increased resistance to plant disease, for producing galactomannan,
CC lignin or plant growth regulators, for increasing the rate of homologous
CC recombination in plants, for improving yield by modification of
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC or by providing improved plant growth and development under at least one
CC stress condition or for modifying seed oil or protein yield and/or
CC content. This sequence represents a plant full length insert
CC polynucleotide that can be used in the recombinant DNA construct of the
CC invention.

PT New isolated nucleic acid detection reagent for detecting 1000 or more
PT genes from Drosophila and for elucidating cell signaling and cell-cell

PT interactions.
 XX Claim 1; SEQ ID NO 3283; 21pp + Sequence Listing; English.
 XX
 CC The invention relates to an isolated nucleic acid detection reagent
 CC capable of detecting 1000 or more genes from *Drosophila*. The invention is
 CC useful in developmental biology and in elucidating cell signalling and
 CC cell-cell interactions in higher eukaryotes for the development of
 CC insecticides, therapeutics and pharmaceutical drugs. The invention
 CC discloses genomic DNA sequences (AB116176-AB130511), expressed DNA
 CC sequences (AB101840-AB116175) and the encoded proteins (AB57737-
 CC AB87072). The sequence data for this patent did not form part of the
 CC printed specification, but was obtained in electronic format directly
 CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

 XX
 PT Novel human cancer associated protein encoded within open reading frame
 PT of cancer associated gene, useful as targets for diagnosing cancer.
 XX
 PS Claim 16; SEQ ID NO 718; 182pp; English.
 XX
 CC The invention relates to cancer-associated proteins (CAP) and the cancer-
 CC associated (CA) nucleic acids encoding them. The invention also relates
 CC to a method for treating cancers involving administering to a patient an
 CC inhibitor of CAP, and a method of screening for anticancer activity in a
 CC potential drug involving providing a cell that expresses a CA gene,
 CC contacting a tissue sample derived from a cancer cell with an anticancer
 CC drug candidate and monitoring the effect of the anticancer drug candidate
 CC on expression of the CA gene. The CAP proteins are useful for detecting
 CC cancer associated with expression of a CAP protein in a test cell sample
 CC and for screening for a bioactive agent capable of modulating the
 CC activity of a CAP protein. The CA nucleic acids are useful for diagnosing
 CC cancer, involving determining the expression of a CA nucleic acid in a
 CC tissue. This sequence represents a human CA gene of the invention. Note:

CC The sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequences

 XX
 PT New isolated nucleic acid representing a synthetic BAX-gene, useful as
 PT medicament for treating, preventing and/or alleviating yeast or fungal
 PT infections or proliferative disorders, or for preventing apoptosis in
 PT certain diseases.
 XX
 PS Claim 36; Fig 2; 34pp; English.
 XX
 CC This invention describes a novel nucleic acid representing a synthetic
 CC Bax gene. The Bax gene of the invention is useful for identifying Bax-
 CC resistant yeast or fungi, identifying, or obtaining and identifying
 CC Candida spp. sequences that are differentially expressed in a pathway
 CC eventually leading to programmed cell death or identifying inhibitors or
 CC inhibitor sequences of Bax-induced cell death. The products of the
 CC invention have cytostatic, fungicide; immunosuppressive, virucide and
 CC vasotropic activity and can be used in vaccines or for gene therapy. The
 CC isolated nucleic acids, polypeptides, pharmaceutical compositions,
 CC antisense molecules and antibodies are useful as medicaments or in
 CC preparing a medicament for treating, preventing and/or alleviating
 CC diseases associated with yeast or fungi or proliferative disorders, such
 CC as cancer, or for preventing apoptosis in certain diseases. The compounds
 CC or polypeptides, or the genetically modified organism are useful for
 CC preparing a medicament for modifying the endogenous flora of humans and
 CC other mammals. The vaccine is useful for immunising against yeast or
 CC fungal infections. Apoptosis-related diseases include autoimmune disease,

CC ischaemia, diseases related with viral infections or neurodegenerations.
CC This sequence represents a polynucleotide associated with the Bax gene
CC described in the disclosure of the invention

PT New isolated nucleic acid molecule that encodes a plant protein or its
PT fragment, useful for isolating a variety of agronomically significant
PT genes associated with plant growth, quality or yield, and as molecular
PT tags to map genes.
XX
PS Claim 1; SEQ ID NO 13985; 34pp; English.
XX
CC The invention relates to 17880 cotton expressed sequence tags (ESTs;
CC ACN45220-ACN63099). The ESTs were isolated from cDNA libraries generated
CC from primed or non-primed seeds from variety DP50B, mature seeds from
CC variety Coker 312 Boswell 96 Field, and androecium tissue, gymnocium
CC tissue, developing fibres, carpel walls and septa from variety
CC Nucotton33B. The invention also relates to substantially purified
CC proteins or their fragments encoded by nucleic acid molecules of the
CC invention, and to transformed plants having a nucleic acid construct
CC comprising a nucleic acid of the invention. The cotton ESTs are useful as
CC molecular tags to isolate genetic regions, to isolate genes, to map
CC genes, to determine gene function and to determine whether genes are
CC members of a particular gene family. The nucleic acid molecules may be
CC used for isolating a variety of agronomically significant genes
CC associated with plant growth, quality, yield, and could also serve as
CC links in metabolic and catabolic pathways. The nucleic acid molecules are
CC also useful for identifying genes important in initiating and maintaining
CC seed germination or that may be used to mitigate stresses encountered
CC during seed germination. The ESTs additionally enable the acquisition of
CC promoters and cis-regulatory elements which will be useful to express
CC agronomically significant genes in these tissues and/or other tissues,
CC and also permits the acquisition of molecular markers useful in breeding
CC schemes, genetic and molecular mapping, and in cloning of agronomically
CC significant genes. The nucleic acid molecules are further useful for
CC detecting the expression level or pattern of a protein or mRNA and for
CC detecting the presence or quantity of a protein by tissue printing. The
CC present sequence represents a specifically claimed EST isolated from a
CC cotton variety Nucotton33B gymnocium tissue cDNA library (LIB3829). The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from the US

XX sarcoma.
XX
XX Example 2; SEQ ID NO 8049; 210pp; English.
PS

XX The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cytostatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC DNA of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

XX
XX New Streptococcus protein for the treatment or prevention of infection or
PT disease caused by Streptococcus bacteria, such as meningitis, and for
PT detecting a compound that binds to the protein.
XX
XX
XX Claim 7; Page 3844; 4525pp; English.

The invention relates to a protein (ABP25413-ABP30895) from group B
Streptococcus/GAS (Streptococcus agalactiae) or group A streptococcus/GAS
(Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in
the specification. The proteins have antibacterial and anti-inflammatory
activity. (I), nucleic acids encoding (II), ABN6044-ABN71526 and
antibodies that bind (I) are used in the manufacture of medicaments for

CC	The treatment or prevention of infection or disease caused by
CC	Streptococcus bacteria, particularly S. agalactiae and S. pyogenes.
CC	Nucleic acids encoding (I) are used to detect Streptococcus in a
CC	biological sample. (I) is used to determine whether a compound binds to
CC	(I). A composition comprising (I) or a nucleic acid encoding (I), may be
CC	used as a vaccine or diagnostic composition. The disease caused by
CC	Streptococcus that is prevented or treated may be meningitis. Nucleic
CC	acid encoding (I) may be used to recombinantly produce (I) and may be
CC	used in gene therapy. Antibodies to (I) are used for affinity
CC	chromatography, immunoassays, and distinguishing/identifying
XX	Streptococcus proteins

PT	New recombinant DNA construct, useful for improving plant tolerance to
PT	cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or
PT	pests, for conferring increased resistance to plant disease, or for
PT	improving yield.
PS	Claim 1; SEQ ID NO 7757, 15pp; English.
XX	
CC	The invention describes a recombinant DNA construct comprising a
CC	polynucleotide consisting of a sequence encoding an amino acid sequence

CC available in electronic form from the US patent office at
CC ftp://seqdata.uspto.gov/sequence.html?docID:2004034688. The polynucleotide
CC of the invention are also useful in physical arrays of molecules and as
CC plant breeding markers. The recombinant DNA construct is useful for
CC improving plant tolerance to cold, heat, drought, herbicides, extreme
CC osmotic conditions, pathogens or pests, for manipulating growth rate in
CC plant cells by modification of the cell cycle pathway, for conferring
CC increased resistance to plant diseases, for producing galactomannan,
CC lignin or plant growth regulators, for increasing the rate of homologous
CC recombination in plants, for improving yield by modification of
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC or by providing improved plant growth and development under at least one
CC stress condition or for modifying seed oil or protein yield and/or
CC content. This sequence represents a plant full length insert
CC polynucleotide that can be used in the recombinant DNA construct of the
CC invention.

XX
XX New composition comprising two or more isolated polypeptides, useful for
PT preparing a medicament for treating pain in an animal.
XX
XX Claim 1; Page; 1017pp; English.
XX
XX The invention discloses a composition comprising two or more isolated rat
CC or human polynucleotides or a polynucleotide which represents a fragment,
CC derivative or allelic variation of the nucleic acid sequence. Also
CC claimed are a vector comprising the novel polynucleotide, a host cell
CC comprising the vector, a method for identifying a nucleotide sequence
CC which is differentially regulated in an animal subjected to pain and a

CC kit to perform the method, an array, a method for identifying an agent
CC that increases or decreases the expression of the polynucleotide sequence
CC that is differentially expressed in neuronal tissue of a first animal
CC subjected to pain, a method for identifying a compound which regulates
CC the expression of a polynucleotide sequence which is differentially
CC expressed in an animal subjected to pain, a method for identifying a
CC compound that regulates the activity of one or more of the
CC polynucleotides, a method for producing a pharmaceutical composition, a
CC method for identifying a compound or small molecule that regulates the
CC activity in an animal of one or more of the polypeptides given in the
CC specification, a method for identifying a compound useful in treating
CC pain and a pharmaceutical composition comprising the one or more
CC polypeptides or their antibodies. The polynucleotide or the compound that
CC modulates its activity is useful for preparing a medicament for treating
CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
CC therapy). The sequence presented is a rat DNA (shown in Table 2 of the
CC specification) which is differentially expressed during pain. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic form directly from WIPO at
CC ftp://wipo.int/pub/publ/published_pct_sequences.

 CC derivative or allelic variation of the nucleic acid sequence. Also
 CC claimed are a vector comprising the novel polynucleotide, a host cell
 CC comprising the vector, a method for identifying a nucleotide sequence
 CC which is differentially regulated in an animal subjected to pain and a
 CC kit to perform the method, an array, a method for identifying an agent
 CC that increases or decreases the expression of the polynucleotide sequence
 CC that is differentially expressed in neuronal tissue of a first animal
 CC subjected to pain, a method for identifying a compound which regulates
 CC the expression of a polynucleotide sequence which is differentially
 CC expressed in an animal subjected to pain, a method for identifying a
 CC compound that regulates the activity of one or more of the
 CC polynucleotides, a method for producing a pharmaceutical composition, a
 CC method for identifying a compound or small molecule that regulates the
 CC activity in an animal of one or more of the polypeptides given in the
 CC specification, a method for identifying a compound useful in treating
 CC pain and a pharmaceutical composition comprising the one or more
 CC polypeptides or their antibodies. The polynucleotide or the compound that
 CC modulates its activity is useful for preparing a medicament for treating
 CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
 CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
 CC therapy). The sequence presented is a rat DNA (shown in Table 2 of the
 CC specification) which is differentially expressed during pain. Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic form directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences.

PT Reverse-correlation-resetting signal transfer gene of plant and protein

XX coded thereof.

XX Claim 6; Page 3-5; 15pp; Chinese.

CC The invention discloses a signal-conveying gene NTHK2 in plants, the
 CC protein encoded by it and its characters of damage, drought and high-
 CC temperature guide in plants. The encoded protein and heterozygous
 CC ethylene receptor protein have higher isogeny but are not of the same
 CC kind, and the encoded protein is novel relative to contrary-resistance of
 CC plants. The invention also refers to their applications in plant gene of
 CC engineering. The present sequence is that of the N tabacum NTHK2 gene of
 CC the invention.

CC The present invention describes primer sets for synthesizing 5602 full-
 CC length cDNAs defined in the specification. Where a primer set comprises:
 CC (a) an oligo-dT primer and an oligonucleotide complementary to the
 CC complementary strand of a polynucleotide which comprises one of the 5602
 CC nucleotide sequences defined in the specification, where the
 CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
 CC of an oligonucleotide comprising a sequence complementary to the
 CC complementary strand of a polynucleotide which comprises a 5'-end
 CC sequence and an oligonucleotide comprising a sequence complementary to a
 CC polynucleotide which comprises a 3'-end sequence, where the
 CC oligonucleotide comprises at least 15 nucleotides and the combination of
 CC the 5'-end sequence/3'-end sequence is selected from those defined in the
 CC specification. The primer sets can be used in antisense therapy and in

CC gene therapy. The primers are useful for synthesising polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH1628 and
CC AAH1633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH1629 to AAH1632 represent
CC oligonucleotides, all of which are used in the exemplification of the
CC present invention

(Un-normalized, unambiguated): cs"
/note="Organ: Eye; Vector: pCMVSPORT6; Two different donor
eyes (75-80 years old) yielded approximately 600 mg of
dissected RPE/choroid tissue. This in turn yielded 340 ug
of total RNA and 7 ug of mRNA. A directionally cloned cDNA
library in the pCMVSPORT6 vector was constructed at life
technologies (Rockville, MD; now part of Invitrogen Corp),
essentially following the protocols of the Superscript
Plasmid System (Invitrogen Corp).
<http://www.invitrogen.com/>. The library code
designation was cs. For this library, cDNA inserts were
cloned into the NotI/MluI sites of the vector. EST
analysis was performed on the unambiguated library at the
NIH Intramural Sequencing Center (NISC)."

ORIGIN

Site 2: Not1; RNA obtained from 5 normal wild-type mice cDNA was primed using oligo-dT primer: 5'-pGACTTATTGATGCGAGCGCGCCCT(1)25-3' and cloned into the EcoRV/NotI sites of pExpress-1. Size-selection 1.4 kb resulted in an average insert size of 1.2 kb. This primary, nanomquantity library is normalized to CoE5 (non-normalized primary library is NIH_MGC_230) and was constructed by Express Genomics (Frederick, MD). Note: this is a NIH_MGC library"

HindIII. Rice is one of two most popular grains in the
world. Half of the world population especially those
inhabiting highly populated areas of the humid tropics
and subtropics, rely on rice as their primary source of
carbohydrate. Monocotyledonous rice is a diploid plant
(2n=24) with a haploid genome equivalent of 431 Mbp
(Arumuganathan and Earle, 1991). The relatively small

genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from *Oryza sativa*, Nipponbare variety. The library contains 36,864 clones with an average insert size of 128.5 Kb providing 10.9 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Two high density filters, each containing 18,432 clones (doubly spotted), represent the whole library for colony screening."

Pools of cells were isolated from a Genomescreen (TM) library. The library of cells was generated by retroviral integration of a gene tagging element consisting of: 1) A promoterless beta-lactamase preceded by a splice acceptor as a reporter for gene expression; 2) A promoter driving neomycin resistance followed by a splice donor to trap downstream exons. 3' RACE from neomycin gene was performed using total RNA from isolated pools. Output was shotgun cloned in pAMP-1 and used to transform DH5-alpha competent bacteria. 5' ends of reported sequences were immediately preceded by splice donor from the trapping construct.
Class: exon-trapped.
